Large temperature fluctuations, condensation, shock, vibration, electromagnetic interference, and more: Electrical and mechanical components for the railway industry must provide safe and reliable operation even under extreme application conditions at all times. This is why, Siemens leaves nothing to chance when developing these components. Right from the start, sound technology, application and service know-how go hand in hand with the highest quality standards.

As a global technology and innovation leader, we continuously push progress and help our customers overcome challenges e.g. by using the so-called digital twin. This cross-domain digital model integrates all data of a physical asset (product, plant or infrastructure systems) from the early design phase to engineering, commissioning, and service. The digital twin offers real value throughout the entire asset lifecycle, reducing over-engineering as well as improving component reliability with predictive engineering system simulation. It also reduces the costs for design, dimensioning and commissioning and accelerates your engineering and project execution.

We have been your reliable partner in the railway industry for decades. Our comprehensive experience in the fields of rolling stock and infrastructure is directly incorporated in the development of our components as is the knowledge we have gained from close cooperation with international standards committees. Therefore, you can rely on our components' guaranteed compliance with railway-specific requirements and standards.

## Developed, tested and certified in accordance with current standards and directives

Siemens is a founding member of the IRIS Initiative, and consistently implements its requirements.

Our railway components comply with all the relevant standards, for example: DIN, EN, IEC, IEEE, ISO, EAC/GOST and ANSI, as well as the current fire protection standard EN45545.

With our certified components, we actively support the worldwide vehicle approval process.

### Electrical components for the railway industry – SIRIUS

#### Overview

#### **SIRIUS range of electrical components for the railway industry**

Whether for rolling stock or infrastructure applications, we offer a comprehensive portfolio of electrical components for countless applications. One of our portfolio highlights is SIRIUS, the complete range for industrial controls. SIRIUS offers everything required for the switching, protection, or starting of

loads, as well as for their monitoring, control, detection, commanding, signaling, or supply. Our portfolio is rounded out by numerous products specifically developed and tested for the railway industry.

#### SIRIUS 3RV2 motor starter protectors for motor protection

- Spring-loaded or screw-type connection system on the terminals (also ring cable lug connection on request)
- For screw and snap-on mounting on DIN rail
- Short-circuit breaking capacity up to 100 kA
- Trip class 10 (sizes S00-S3)
- Integrated motor protection up to 100 A at +70 °C
- Comprehensive accessories/infeed systems
- Rated current:
  - Up to +60 °C 100 %
  - Up to +70 °C 87 %
- Mechanical service life:
  - 250 to 500 switching cycles

#### SIRIUS 3RT2 motor contactors up to 45 kW

- Spring-loaded or screw-type connection system on the terminals (also ring cable lug connection on request)
- Coil with suppressor diode or varistor circuit
- For screw and snap-on mounting on DIN rail
- Extended operating range: 0.7 – 1.25 x Us
- Communication via IO-Link for stationary applications
- Mounting:
  - Electronic coil: clearance up to ambient temperatures of 70 °C is not required
- Contacts:
  - Electronic coil: Auxiliary switches expandable in the same way as standard contactors

#### SIRIUS 3RT1 motor contactors from 55 to 250 kW

- Screw-type connection system via busbar connection or box terminal
- Optional control via a separate control signal input of 24 to 110 V DC (operating range from 0.7 to 1.25 x Us)
- Can be used at ambient temperatures up to 70 °C
- Contacts:
  - Two NO contacts and two NC contacts as standard
  - Auxiliary switches expandable in the same way as standard contactors

## SIRIUS 3RF solid-state switching devices

- Solid-state switching devices for switching 1- and 3-phase resistive and 3-phase motor loads
- Spring-loaded, screw-type and ring cable lug connection system
- Extremely durable, low-maintenance, rugged, and reliable thanks to long switching service life
- Wear- and noise-free switching, also for noise-sensitive areas
- Expandable functionality through plug-on function modules
- Vibration resistance in accordance with EN 61373 Category 1, Class B

## SIRIUS 3TC DC contactors

- 3TC44 for screw and snap-on mounting on DIN rail
- 3TC48 to 3TC78 for screw mounting
- Solenoid coil fitted with varistor
- Extended operating range: 0.7 – 1.25 x  $U_s$
- Contactors for switching DC voltages up to 1500 V
- Version with series resistor:
  - Mounting clearance up to ambient temperatures of 70 °C is not required
  - Mounting: with size 2 (3TC44) a clearance of 10 mm is required
  - Contacts: auxiliary switches not expandable; two NO contacts and one NC contact as standard

## Introduction

1

### Electrical components for the railway industry – SIRIUS

#### SIRIUS 3RH2 contactor relays

- Spring-loaded and screw-type connection system on all terminals (also ring cable lug connection on request)
- Coil with suppressor diode or varistor circuit
- For screw and snap-on mounting on DIN rail
- Extended operating range: 0.7 to 1.25 x Us
- Electronic coil with very low switch-on and holding power
- With electronic coil:
  - Ambient temperature up to 70 °C
  - Mounting without clearance
  - A 4-pole auxiliary switch block can be mounted
- Standard coil (coupling contactors):
  - Ambient temperature > 60 °C
  - Mounting with a clearance of 10 mm
  - It is not possible to mount an auxiliary switch block

#### SIRIUS 3RH2 latched contactor relays

- Screw-type connection system
- Solenoid coil fitted with varistor
- For screw and snap-on mounting on DIN rail
- Extended operating range: 0.7 – 1.25 x Us
- Electronic coil with very low switch-on and holding power
- With electronic coil:
  - Ambient temperature up to 70 °C
  - Mounting without clearance
  - A 4-pole auxiliary switch block can be mounted

#### SIRIUS 3TH4 contactor relays with 8 and 10 contacts

- Screw-type connection system
- Solenoid coil fitted with varistor
- For screw and snap-on mounting on DIN rail
- Extended operating range: 0.7 – 1.25 x Us
- The contacts are not expandable
- Mounting:
  - At ambient temperatures between 55 °C and 70 °C a clearance of 10 mm is required for side-by-side mounting

#### SIRIUS ACT push buttons and signaling devices

- Modern design and flexible concept:
  - 4 design lines in plastic, shiny metal and matte metal in 22/30 mm
  - Actuators, holders, contact module and LED modules can be ordered individually and combined freely
- Broad product range:
  - State-of-the-art functions, such as ID key-operated switches on RFID basis
  - Customized variants, e.g. special tumbler arrangements, labeling, pre-assembled enclosures
- Communication:
  - Communication-enabled due to optional connection to AS-Interface, IO-Link or PROFINET
- Ruggedness:
  - Degree of protection IP69K is our standard

## Electrical components for the railway industry – SIRIUS

## SIRIUS monitoring relays

- Monitoring relays for electrical parameters, thermistor motor protection, temperature, filling level, speed
- All versions with removable terminals, featuring either spring-loaded or screw-type connection system
- Applicability in all networks thanks to wide voltage range
- Variable adjustability
- 3-phase current monitoring integrated in the main circuit
- Communication via IO-Link for stationary applications

## SIRIUS 3RQ coupling relays

- SIRIUS 3RQ2 coupling relays in robust industrial housing (22.5 mm width) and 3RQ3 coupling relays in slim design (6.2 mm)
- Coupling technology with power, plug-in and coupling relays in accordance with the railway standard
- Coupling links with two-tier design and connections on two levels
- Versions with removable terminals, featuring either spring-loaded or screw-type connection system
- Versions with very slim design of only 6.2 mm (3RQ3)
- Versions with up to 3 changeover contacts in width of only 22.5 mm (3RQ2), also available with hard gold-plated contacts for switching of small currents
- Low power consumption
- Applicability in all networks thanks to wide voltage range
- Version with solid-state compatible outputs (hard gold-plating)

## SIRIUS 3RP2 timing relays

- Electronic timing relays (multifunction) with up to 15 time ranges
- Electronic timing relays with two changeover contacts and positively-driven relay contacts
- Individual or selectable time ranges
- Switch position and voltage indication via LED
- With removable terminals, featuring either spring-loaded or screw-type connection system
- For screw and snap-on mounting on DIN rail
- Electronic timing relays with positively-driven relay contacts:
  - 2 changeover contacts
  - Vibration resistance in accordance with DIN EN 61373 Category 1, Class B
  - Interference immunity in accordance with EN 50121-3-2

## SIRIUS 3SK1 safety relays

- Suitable for all safety applications up to SIL 3/PL e
- Modular hardware configuration
- Simple commissioning using DIP switches and software parameter assignment
- Simple selection thanks to a small number of multifunctional devices
- SIRIUS safety relays can be integrated into systems simply and independently of the automation solution
- More functionality and flexibility through freely configurable safety logic
- Vibration resistance in accordance with DIN EN 61373 Category 1, Class B
- Interference immunity in accordance with EN 50121-3-2 Table 1

## SIRIUS 3SE5 position switches

- Modular device design with easy plug-in connection system
- Four different enclosure versions in plastic and metal
- Optional LED display for all enclosures
- Positive opening of NC contacts
- Area of application up to SIL 3 in accordance with IEC 62061
- High contact reliability, also with 5 V DC/1 mA
- Safety position switches with separate actuator with/without tumbler
- High degree of protection up to IP 66/IP 67
- Extended temperature range: -40 °C to +85 °C
- Versions with increased corrosion protection

## Introduction

### Electrical components for the railway industry – SENTRON

#### Overview

##### **SENTRON protection and switching devices**

Tested protection and switching devices from the SENTRON portfolio ensure reliable low-voltage power distribution in infrastructure and railway applications.

The perfectly coordinated components offer outstanding flexibility, convenience, and safety for the railway industry.

#### 5SY4, 5SY5, 5SY7 MCBs

- Optional top or bottom infeed thanks to identical terminals
- Convenient entry thanks to large and easily accessible wiring space
- Rapid manual removal from the busbar assembly
- Vibration- and shock-proof in accordance with DIN EN 61373 and DIN EN 50155 "1B"
- Applicability at ambient temperatures from -40 °C to +70 °C, with max. humidity of 95 %
- Rated switching capacity: 10 kA AC and 1 kA DC
- Vibration resistance:
  - According to IEC 60068-2-6, 50 m/s<sup>2</sup> with 25 to 150 Hz and 60 m/s<sup>2</sup> with 35 Hz (4sec)
  - According to EN 61373 Category 1, Class B
- 5SY5: Usable for DC applications up to 250 volts per pole

#### 5SY17 Circuit Breaker for Equipment

- Circuit Breaker for Equipment offer optimum protection for all applications in AC and DC control circuits in industrial applications and plant engineering.
- They protect solenoid valves, servo motors, signal lamps or even PLC inputs.
- EN 61373, EN 45545-2, UL 1077, IEC 60934

#### 5SL6 COM miniature circuit breakers with communication and measuring function

- The new communication-capable MCB's record measured values and status information and transmit this data wirelessly to higher-level systems.

#### 5ST3 COM Auxiliary switches and fault signal contacts (AS+FC)

- 5ST3 COM Auxiliary switches and fault signal contacts (AS+FC) with Communication and measuring functions

#### 7KN Powercenter 1000

- Wireless radio transmission of measured values and data to the 7KN Powercenter data transceiver
- Parameter assignment, firmware updates and further processing of the data via the 7KN Powercenter 1000 data transceiver

## Electrical components for the railway industry – SENTRON

## 5ST3010 auxiliary switches (AS) for MCBs

- 5ST3 add-on components: can be combined with 5SY MCBs and 5SU1 RCBOs
- Signaling of the miniature circuit breaker's contact position by the auxiliary switch (AS) – released by hand or due to fault
- Auxiliary switch version with test button for testing of the control circuit without switching the miniature circuit breaker
- Rated breaking capacity: 60 A
- Ambient temperatures: -25 °C to +55 °C
- Climate resistance: according to IEC 60068-2-30 28 cycles

## 5SV RCCBs

- Enhanced comfort and safety due to improved design
- Comprehensive uniform accessories for additional functions
- Consistent busbar system concept for all RCCBs with N connection on the right or left
- Easy removal of individual equipment from the linked assembly
- Rated residual current: 30, 300 mA
- Quick and easy replacement thanks to fast manual removal of the RCCBs from the assembly
- Vibration resistance in accordance with DIN EN 61373 Category 1, Class B
- Vibration- and Shocktests according to DIN EN 50155 7391
- Properties for fire protection according to DIN EN 45545-2 7444

## 5SU1 RCBOs

- Clear, visible and controllable connection of the supply line
- Convenient entry thanks to large and easily accessible wiring space
- Peak withstand current (> 1 kA) for safe operation
- Retrofitting of add-on components for miniature circuit breakers on the right side
- Rated residual current: 10, 30, 300 mA, Rated current: 6 to 40 A
- Width: 2 WU
- For all 10 kA versions up to 40 A:
  - Full insulation through integrated, movable terminal covers in the area of conductor entries
  - Replacement time savings thanks to rapid manual removal of the miniature circuit breakers from the assembly when changing the connections
- Vibration resistance in accordance with DIN EN 61373 Category 1, Class B
- Vibration- and Shocktests according to DIN EN 50155 7511
- Properties for fire protection according to DIN EN 45545-2 7512
- Oscillating- and Shock Test Certificate 7209

## Remote controlled mechanisms 5ST30

- The market's most modular system
- Easy selection between manual/off/RC mode
- Easy connection to RCBOs, RCDs, MCBs, and other devices with adapters
- Rated voltages: 12 ... 30/177 ... 270 V AC or 12...48 V DC
- Width: 2 WU
- Applicability at ambient temperatures from -40 °C to +70 °C
- Climate resistance: according to IEC 60068-2-30 28 cycles
- Vibration resistance: according to IEC 60068-2-6. 50 m/s<sup>2</sup> with 10 to 150 Hz

## 3NA3360, 3NA3812 LV HRC fuse links

- Rated breaking capacity 120 kA AC, 25 kA DC
- Rated breaking capacity: 25 kA DC
- Rated current: 2 to 1250 A
- Contact blade: corrosion-free, silver-plated
- Climatic withstand capability: -20 °C up to +50 °C with 95% relative humidity
- Blown-fuse monitoring with 3NX1021 und 3NX1023

## 3NH3030 LV HRC fuse bases and accessories

- Made of ceramic material for screw mounting
- With flat connections, screw
- Size 00, 1, 2, 4

## Introduction

### Fire safety is essential for railway safety

#### Overview

In the event of a fire, a train must be able to reach an appropriate evacuation location to protect people, goods and installations. Automatic fire detection has become an essential aspect of a comprehensive fire safety concept. This is especially the case for train traffic through tunnels and more generally in non-secured areas.

#### **Fire detection for rolling stock**

Whether you are a rolling stock manufacturer or train operator, our fire safety solutions for rolling stock meet all your expectations.

As a rolling stock manufacturer, you want to:

- purchase reliable, turnkey solutions with associated services
- supply and easily integrate products and systems
- use products and systems that completely fulfill current standards

As a train operator, you want to:

- ensure continuous and flexible operation by using high-performance systems
- efficiently manage the availability of your rolling stock
- optimize operating and operational costs
- ensure the highest level of safety for passengers and staff

Backed by our expertise in the field of fire protection, we offer you innovative and lasting solutions for rolling stock like high-speed trains, locomotives, trams and metro lines.

**DSW – Series for rough environmental requirements**

- Solution for rough environmental conditions
- Rail base with external industry standard plug
- Plug & Play solution
- Power supply 24 V DC or 110 V DC
- Alarm and Fault signaling via relay output
- Stand-alone connectivity

**DS1 – Series for standard installation**

- High-end multi criteria spot detector
- Rail base for standard ceiling installation
- Power supply 24 V DC or 110 V DC
- Alarm and Fault signaling via relay output
- 3 parameters selectable
- Stand-alone connectivity

**DS2 – Series for hidden installation and plug&play connectivity**

- High-end multi criteria spot detector
- Rail base with external industry standard plug
- Plug & Play solution
- Power supply 24 V DC or 110 V DC
- Alarm and Fault signaling via relay output
- 3 parameters selectable
- Stand-alone connectivity

**ASD – Series for advanced smoke detection**

- Aspiration smoke detection for railway
- Aspirating smoke detector for high-end fire detection in trains
- Very sensitive and reliable fire detection through differentiation between smoke and deceptive phenomena
- Quick & easy configuration to minimize start-up sequence
- Meets rail specific standards and achieves safety integrity level 2 (SIL2)

## Introduction

### Electrical components for the railway industry – Damper actuators

#### Overview

##### **Air Damper actuators with / without spring return functionality for railway vehicles**

Our new damper actuators with DC24 V and DC110 V for use in rail vehicles can be used typically for shut-off and regulation of air volume flows in air conditioning units and air distribution systems.

Typical applications:

- Compact air conditioning units (Driver's cab air-conditioning)
- Roof-top mounted air conditioning units
- Underfloor air conditioning units
- General air distribution

#### Damper actuators with spring return functionality

- GPC... series, for open-close and modulating control
  - Nominal torque 4 Nm
  - Running time 60 s
  - Operating voltage DC 24 V / DC 110 V
  - Connection cables railway specific
  - Emergency function with spring return
  - Position indication
  - Integrated switches for auxiliary functions
  - Degree of protection IP54
  - Printed circuit board with protective coating
- Damper actuators with spring return functionality for difficult operating conditions; they fulfill the main requirements as per:
  - EN 50155 (electronic equipment on rail vehicles)
  - EN 45545 (fire protection of rail vehicles) internal applications
  - EN 61373 (shock and vibration, rail applications)
- These damper actuators are expressly suitable for air conditioning units and air distribution systems for railway vehicles. Typically, used to operate air dampers that must be driven to a defined emergency position in the event of a loss of voltage.
- For damper areas of approx. 0.6 m<sup>2</sup>
- Suitable for use with 2-position, as well as modulating controllers (DC 0/2...10 V)

#### Damper actuators without spring return functionality

- GDD / GDA / GLD / GLA... series, for open-close and modulating control
  - Nominal torque 5 / 8 / 10 Nm
  - Operating voltage DC 24 V / DC 110 V
  - Runtime 30 s / 90 s
  - Rotary angle 0...90°
  - Connection cables railway specific
  - Feedback potentiometer
  - Adjustable auxiliary switches
  - Degree of protection IP54
  - Printed circuit board with protective coating
- Damper actuators without spring return functionality; they fulfill the main requirements as per:
  - EN 50155 (electronic equipment on rail vehicles)
  - EN 45545 (fire protection of rail vehicles) internal applications
  - EN 61373 (shock and vibration, rail applications)
- These damper actuators are expressly suitable for air conditioning units and air distribution systems for railway vehicles. Thanks to a very low sound power level (<28dB(A)), the damper actuators are virtually predestined for use in sleeping cars, couchettes, and passenger coaches.
- For damper areas of approx. 0.8 m<sup>2</sup>
- Suitable for use with 2-position, as well as modulating controllers (DC 0/2...10 V)

## Electrical components for the railway industry – SIPLUS extreme RAIL

## Overview

**SIPLUS extreme RAIL – automation with railway approvals**

Thanks to their extensive approvals and conformity to railway standards, the new SIPLUS extreme RAIL products are the perfect choice for a wide range of rolling stock and trackside applications. Based on SIMATIC industrial controllers, common

features such as integrated system diagnostics and security and safety are already included. Whether simple, complex or distributed - SIPLUS extreme RAIL offers a durable and robust solution for your automation tasks.

## SIPLUS extreme RAIL-Controller

- Basic and advanced controller for use in simple applications such as sanding systems and hygiene cubicles up to complex setups such as HVAC, signaling systems and interlockings
- Compliant to EN 50155, EN 45545 and EN 50124
- Failsafe controller certified for EN 50126, EN 50128, EN 50129 and EN 50159
- Insulation testing for every item
- Conformal Coating
- Temperature classes OT4: -40 °C to +85 °C\* and OT1: -25 °C to +70 °C\* (\* includes +15 K overtemperature for 10 minutes)
- PROFINET, Ethernet, CAN, OPC UA and PROFISAFE communication
- High electromagnetic immunity to interference (EMC) and mechanical resilience (vibration and shock)
- Integrated system diagnostics and security
- 110 V IOs available

## SIPLUS extreme Rail HMI

- HMI Panels for visualization of simple, medium and complex applications
- Compliant to EN 50155, EN 45545 and EN 50124
- Insulation testing for every item
- Conformal Coating
- Temperature class OT1: -25 °C to +70 °C\* (\* includes +15 K overtemperature for 10 minutes)
- PROFINET, Ethernet, CAN, OPC UA and PROFISAFE communication
- High electromagnetic immunity to interference (EMC) and mechanical resilience (vibration and shock)
- Integrated system diagnostics and security
- Horizontal installation

## SIPLUS extreme Rail Distributed I/O

- Distributed I/O controller for medium and complex applications
- Compliant to EN 50155, EN 45545 and EN 50124
- Failsafe controller certified for EN 50126, EN 50128, EN 50129 and EN 50159
- Insulation testing for every item
- Conformal Coating
- Temperature classes OT4: -40 °C to +85 °C\* and OT1: -25 °C to +70 °C\* (\* includes +15 K overtemperature for 10 minutes)
- Seamless integration into the common TIA Portal engineering framework
- PROFINET, Ethernet, CAN, OPC UA and PROFISAFE communication
- High electromagnetic immunity to interference (EMC) and mechanical resilience (vibration and shock)
- Integrated system diagnostics and security

## Introduction

### Electrical components for the railway industry – SIDOOR

#### Overview

#### **SIDOOR – Innovative door control systems and now also for metro gap filler control systems**

In the field of railway applications, we offer SIDOOR automatic control system for platform screen doors and gates (PSDs & PSGs), interior train doors and now also for gap fillers.

Safe and convenient operation of the doors or steps is always ensured (friction and energy limitation).

#### Controller for gap filler – SIDOOR ATE530G coated

- Extends a step until 30 kg within 1 s by a maximum of 163 mm against a fixed stop
- Project specific EC motor
- Ice function: A higher extension force can be created within the first 50 mm (parameterizable)
- Variant with additional, transparent protective coating to prevent impairment or damage by moisture and atmospheric pollutants
- Certified according to: DIN EN 50657: 2017 (Basic Integrity)

#### Controllers for platform screen doors – SIDOOR ATE530S COATED and SIDOOR ATE531S

- Less mounting and wiring effort thanks to PROFINET. Furthermore, program changes, software updates and the teach-in drive of all SIDOOR systems can be started from a platform or even from the metro line control center. This substantially reduces commissioning times.
- Seamless integration into the TIA system architecture and expansion of the inputs and outputs for additional actuators and sensors, for example by SIPPLUS ET 200SP RAIL
- Detailed diagnostics and parameter assignment options
- The 5 inputs and 2 outputs can be individually configured
- Freely configurable unlocking sequences
- Certified according to: IEC 62061 (SIL 2 for named functions), EN 60335-1, EN ISO 13849-1, EN 14752 (force and energy)
- Variant with additional, transparent protective coating to prevent impairment or damage by moisture and atmospheric pollutants
  - Corresponds to EN 50155 chapter 12, chapter 9.4
- SIDOOR ATE531S (fig. without lid)
  - additional temperature range extended to +70 °C

#### Motors for platform screen doors and gates– SIDOOR MEG251 and SIDOOR MED280

- Low noise, low heat rise, maintenance-free
- SIDOOR MEG251 left/right:
  - Compact size – EC geared motor for door weights up to 250 kg
  - For retrofit applications (replacement for SIDOOR ATE250S, including SIDOOR MEG250)
- SIDOOR MED280:
  - Gearless EC direct drive for door weights up to 280 kg – provides even higher reliability and energy balance = less wear = long service life
  - Just one motor for different installation orientations = asset minimization

#### Door drive for interior railway doors – SIDOOR ATD400T with SIDOOR MDG180 DIN EN 45545-2 or SIDOOR M3

- Complies with the new fire protection standard for components in rail vehicles according to DIN EN 45545-2 – Hazard Level HL 3
- Certified safety according to DIN EN 14752 (fail-safe limitation of force and energy)
- Extended operating temperature range: -25 °C to +70 °C and for 10 minutes up to +85 °C with reduced track-related speed profile parameters
- SIDOOR MDG180 DIN EN 45545-2 left/right:
  - Compact design – DC geared motor for door weights up to 180 kg
- SIDOOR M3 left/right:
  - better cost position, when extended fire protection standards are not needed
- SIDOOR ATD400T:
  - Including push-to-open and push-to-close function

## Electrical components for the railway industry – SCALANCE | RUGGEDCOM

## Overview

**Communication solutions for railway industry with SCALANCE and RUGGEDCOM**

Siemens offers a wide range of communication products and technologies that are specifically designed to give railway operators all the tools they need for continuously trouble-free railway operation based on current security standards – from the integration of legacy infrastructure to long-haul fiber backbones

and widespread wireless connectivity for mobile and stationary applications. Siemens is active worldwide, and has the knowledge and experience to deliver complete, standardized communication solutions to the railway industry.

**SCALANCE XC-200**

- Meets the railway standard EN 50121-4 (trackside)
- Redundant power supply
- Up to 24 x RJ45 ports 10/100 Mbit/s for mounting in the control cabinet
- Additional versions with optical ports (SC/ST/LC) up to 1 Gbit/s and with conformal coating (XC-200EEC) available
- Slot for optional C-PLUG removable data storage medium for easy device replacement without additional equipment such as a field PG
- Fast mobile network diagnostics by smartphone or tablet via WLAN and NFC (Near Field Communication)

**SCALANCE XP208EEC, XP208PoE EEC, XP216EEC and XP216PoE EEC**

- Meets the railway standards EN 50155 and EN 45545-2 (train- and trackside)
- Managed Switch, high degree of protection (IP 65) for use outside the control cabinet, temperature range -40 °C to +70 °C with coated PCBs (conformal coating), stable metal enclosure
- Flat type for installing in partitions etc., many mounting options
- Clearly highlighted diagnostic area
- Supports PoE ports (IEEE 802.3 at type 2, 30 W per port)
- Variants:
  - XP208EEC: 8-port managed switch
  - XP208PoE EEC: 8-port managed switch, 4 ports with PoE function
  - XP216EEC: 16-port managed switch
  - XP216PoE EEC: 16-port managed switch, 8 ports with PoE function

**SCALANCE XR324-12M TS / XR324-4M PoE TS**

- Meets the railway standards EN 50155, EN 45545-2 and EN 50121-4 (train- and trackside)
- Modular, managed Layer 2 Industrial Ethernet 19" rack switches
- Redundancy functions for highly available ring topologies, tried and tested in industrial applications (MRP/HRP), equipped with additional IT functions, e.g. VLAN, RSTP, MSTP
- Gigabit Ethernet support on all 24 ports
- Ambient temperature -40 °C to +70 °C
- Can be used in harsh environments due to vibration-proof/shock-proof plug-in connection
- Variants:
  - SCALANCE XR324-12 M TS: 12 slots for electrical (RJ45 / M12) and/or optical 2-port media modules (multi-mode or single-mode), which are inserted into the media module slots of the basic unit
  - SCALANCE XR324-4M PoE TS:
    - 16 integrated RJ45 ports, of which 8 are PoE-capable
    - 4 slots for electrical (RJ45 / M12) and/or optical 2-port media modules, which are inserted into the media module slots (multi- or single-mode) of the basic unit

**SCALANCE XM408-8C with Port Extender PE408PoE**

- Meets the railway standard EN 50121-4 (trackside)
- SCALANCE XM408-8C with 8 ports available in total, of which
  - up to 8 x 10/100/1000 Mbit/s are RJ45 ports with retaining collars
  - up to 8 x SFP slots (combo ports), 100 or 1000 Mbit/s of either electric port or SFP slot
- Two port extenders with 8 ports each can be connected to implement a maximum of 24 ports in one switch
- Fast mobile network diagnostics by smartphone or tablet via WLAN and NFC
- High-speed media redundancy through integral redundancy manager even for large networks, for both Gigabit Ethernet and Fast Ethernet
- Opt. activation of the Layer 3 functions in connection with the KEY-PLUG XM-400
- PE408PoE Port Extender for SCALANCE XM-400 managed modular IE switch; extension by 8 x 10/100/1000 Mbit/s RJ45 with up to 8 ports PoE according to IEEE 802.3 at type 2

## Introduction

1

### Electrical components for the railway industry – SCALANCE | RUGGEDCOM

#### SCALANCE MUM856-1

- Meets the railway standards EN 50155, EN 45545 and EN 5012
- 5G/4G/3G router for wireless connection via the mobile radio network – perfect for large bandwidth requirements, e.g. for video transmission, data link for automatic ticket machines, infotainment services, internet on board and telemetry
- Bandwidth up to 1000 Mbit/s downlink and 500 Mbit/s uplink (5G)
- Redundant power supply
- Network management via SNMP
- Integrated firewall and IPsec / OpenVPN
- Ambient temperature -30 °C to +60 °C

#### SCALANCE M876-4 + ANT896-6MH

- Meets the railway standards EN 50155 and EN 50121-4
- 4G/3G router for wireless connection via the mobile radio network – perfect for large bandwidth requirements, e.g. for video transmission, data link for automatic ticket machines, infotainment services, internet on board and telemetry
- Bandwidth up to 100 Mbit/s downlink and 50 Mbit/s uplink (4G)
- Redundant power supply
- Managed 4-port switch, network management via SNMP
- Integrated firewall and IPsec/OpenVPN
- Ambient temperature -20 °C to +60 °C
- 2G/3G/4G antenna ANT896-6MH for mounting on the vehicle roof

#### SCALANCE W774-1 M12 EEC and SCALANCE W778-1 M12 EEC

- Meets the railway standards EN 50155 and EN 50121-4
- Industrial Wireless LAN Access Points for installation in control cabinets or for indoor use with IEEE 802.11a/b/g/n support and data transfer rates up to 300 Mbit/s
- Low-profile, compact aluminum enclosure, shock and vibration-proof, for high mechanical requirements, variants in protection class IP30 and IP65
- M12 connections for 10/100 Mbit/s with PoE
- Coated PCBs (conformal coating) and extended temperature range (-30 °C to +70 °C)
- Mounting outside of the cabinet also possible thanks to IP65 protection class (SCALANCE W778-1 M12)
- Additional functions (iFeatures) can be activated optionally with a KEY-PLUG, e.g. iPRP for reliable redundancy with WLAN

#### SCALANCE W1788-2 M12 EEC

- Meets the railway standards EN 50155, EN 45545-4 and EN 50121-4
- Industrial Wireless LAN Access Point for installation in control cabinets or for indoor use with IEEE 802.11ac support with transfer rates up to 1700 Mbit/s
- Rugged aluminum enclosure, shock and vibration-proof, for high mechanical requirements, protection class IP65, coated PCB (conformal coating)
- M12 connection for 10/100/1000 Mbit/s with PoE
- Antenna positioning optimized for 4 x 4 MIMO; no interference between the antennas for direct mounting on the device
- Ambient temperatures: -20 °C to +60 °C
- Additional industrial functions (iFeatures) can be activated optionally via a CLP, e.g. iPRP for reliable redundancy with WLAN

## Electrical components for the railway industry – SCALANCE | RUGGEDCOM

## SCALANCE WAM766-1 EEC

- Meets the railway standards EN 50155, EN 45545-2
- Industrial Wireless LAN Access Point for installation in control cabinets or for indoor use with IEEE 802.11ax support and data transfer rates up to 1,201 Mbit/s
- Rugged aluminum enclosure, shock and vibration-proof, for high mechanical requirements, protection class IP65, conformal coating, e1 approval
- M12 connection for 10/100/1000 Mbit/s with PoE
- Interfaces: 2 x 2:2 MIMO N-Connect antenna connections
- Ambient temperatures: -30 °C to +75 °C
- Additional industrial functions (iFeatures) can be activated optionally via a CLP, e.g. iPRP for reliable redundancy with WLAN

## IWLAN accessories: antennas and cables

- Remote antennas increase the reliability of wireless links by optimizing signal reception and emission
- Use in Industrial Wireless LAN (IWLAN) and WLAN according to IEEE 802.11 at 2.4 GHz and 5 GHz
- The connection cables meet the increased requirements for environmental conditions and fire protection that are required for use in vehicles (including EN 45545-2)

## RUGGEDCOM RS900G / RS900GP

- Meet the railway standard EN 50121-4
- Managed Ethernet switch for reliable operation in critical infrastructure
- Multiple fiber connector types (LC, SC, ST, SFP)
- Long-haul optics allow Gigabit uplinks for distances up to 70 km
- Operating temperature from -40 °C to +85 °C
- Variants:
  - RS900G: Managed Ethernet switch with 10 ports, Gigabit fiber-optic uplinks and 128 bit encryption
  - RS900GP: Managed Ethernet switch with 10 ports, of which 8 are Power-over-Ethernet (PoE) ports and 2 Gigabit uplinks, with 128 bit encryption

## RUGGEDCOM RSG920P

- Meets the railway standards EN 45545-2 and EN50121-4
- High port density to meet the Ethernet requirements along the track
- Compact layer 2 Gigabit switch with 20 Gigabit ports, including 4 PoE ports and 4 SFP slots and I/Os with PoE supply
- SFP ports for greater flexibility and migration in future Ethernet networks
- 19" switch performance features in compact design to save space
- Application and commissioning with USB console and MicroSD firmware/configuration
- RPS1300 power supply suitable for Power-over-Ethernet devices, max. power 140 W

## RUGGEDCOM RSG907R / RSG909R

- Meet the railway standard EN 50121-4
- PRP/HSR coupling functionality to cover all types of redundant network topologies
- 3 x RNA (Redundant Network Access) and coupler Ethernet ports according to IEC 62439-3 (1000BASE-X), plus
  - RSG907R: 4 x SAN (Singly Attached Node) fiber optic ports (LC, 100BASE-FX)
  - RSG909R: 6 x SAN (Singly Attached Node) copper Ethernet (RJ45)
- Power redundancy: Integrated power supply with redundant inputs
  - Universal high voltage range: 88 – 300 VDC or 85 – 264 VA;
  - Universal low voltage power supply range: 10 – 60 VDC

## Introduction

1

### Electrical components for the railway industry – SCALANCE | RUGGEDCOM

#### RUGGEDCOM RSG908C / RSG910C

- Meet the railway standards EN 50155 and EN 50121-4
- IEEE 1588 v2 Ordinary & Transparent Clocks
- RUGGEDCOM RSG908C: 4 x 1000BASE-X SFP uplink Ethernet ports and 4 x100BASE-FX LC fiber optic ports
- RUGGEDCOM RSG910C: 4 x 1000BASE-X SFP uplink Ethernet ports and 6 x 10/100/1000BASE-TX RJ45 copper Ethernet ports

#### RUGGEDCOM RST916P / RST916C

- Meet the railway standards EN 50155 and EN 50121-4
- IEEE 1588 v2 Ordinary & Transparent Clocks
- Removable storage medium, CLP, for device configuration back-up
- RUGGEDCOM RST916P: 12 x 10/100/1000BASE-T RJ45 ports, 4 x 1G BASE-X/1000BASE-X SFP+, 10 x 10/100/1000BASE-T IEEE 802.3bt Types 1, 2, and 3 compliant PoE ports (60 W/port)
- RUGGEDCOM RST916C: 12 x 10/100/1000BASE-T RJ45 ports and 4 x 1G/10G BASE-X/1000BASE-X SFP+

#### RUGGEDCOM RX1400

- Meet the railway standard EN 50121-4
- Rugged Industrial Ethernet switch and TCP/IP router with LTE and fiber-optic WAN options in compact design
- For safe, cost-effective implementation of extensive communication applications and a high processing performance in harsh industrial environments
- 4 x Fast Ethernet copper ports and 2 x Gigabit SFP slots (Small Form Factor Pluggable)
- Supports multi-mode and single-mode SFPs for distances up to 100 km
- Equipped with GPS input
- Available with or without LTE modem for Europe, North America, the Asia-Pacific Region and Japan
- Operating temperatures from -40 °C to +85 °C; fanless operation
- The RUGGEDCOM VPE1400 provides a virtualized environment to run a guest Linux operating system and third party applications on the RX1400, enabling intelligence at the network edge

#### RUGGEDCOM RX1500 / RX1501 / RX1510 / RX1524 / RX1536

- Meet the railway standards EN 50155 and EN 50121-4 (Only RUGGEDCOM RX1524 and RX1536)
- Modular and field-replaceable layer 2 and layer 3 switch and router
- M12 line modules with very wide range of functions (M12/RJ45, Fast Ethernet / Gigabit, etc.)
- ROX II software features with integrated router/firewall / VPN / VRRP/MPLS
- Input voltage: 24 V DC, 48 V DC, 88 to 300 V DC, and 85 to 264 V AC for worldwide operability
- Operating temperature from -40 °C to +85 °C

#### RUGGEDCOM RSG2100 / RSG2100P

- Meet the railway standard EN 50121-4
- Modular fully managed Ethernet switch for use in electrically harsh and climatically demanding environments
- Up to 3 Gigabit Ethernet ports and 16 Fast Ethernet ports (copper and /or fiber optic)
- 2-port modules for outstanding flexibility
- Store and forward switching
- Supports many fiber-optic types (multi-mode, single-mode) with diverse connectors (ST, MTRJ, LC, SC, SFP)
- Fully integrated, dual redundant (optional) power supplies
- Variant available with up to 4 ports conforming with IEEE 802.3af (10/100BaseTX)

## Electrical components for the railway industry – SCALANCE | RUGGEDCOM

## RUGGEDCOM RSG2300 / RSG2300P

- Meets the railway standard EN 50121-4
- Fully managed Ethernet rack switch with 32 ports and 4 modular Gigabit uplink ports and 24 Fast Ethernet copper ports
- Optional: up to 4 x 1000LX Gigabit Ethernet ports (copper and/or fiber-optic) and up to 8 x 100FX Fast Ethernet ports (copper and/or fiber-optic)
- Non-blocking, store and forward switching
- Supports many fiber-optic types (multi-mode, single-mode) with diverse connectors (ST, MTRJ, LC, SC, SFP)
- Fully integrated, doubly redundant (optional) power supplies
- Variant available with up to four ports conforming with IEEE 802.3af (10/100BaseTX)

## RUGGEDCOM RST2228 / RST2228P

- Meets the railway standards EN 50155 and EN 50121-4
- 19" Layer 2 rack switch with up to 28 Ports: 4 x 1/10 Gigabit ports (SFP), 24 Gigabit/Fast Ethernet ports (SFP, RJ45, LC)
- Power-over-Ethernet Variant available
- Supports IEEE 8023.at/802.3bt (draft) with max. 60W per port
- Maximum Power budget 500W
- Modular; field-replaceable Ethernet media modules with 4 ports for outstanding flexibility
- Supports IEEE 1588 v2 time synchronization with hardware time stamping and transparent clock
- Non-blocking, store and forward switching
- Integrated dual redundant power supplies

## RUGGEDCOM WIN

- First broadband wireless product portfolio designed for private networks delivering the benefits of 4G technology to critical infrastructure applications in harsh environments
- Provides enhanced security, network simplicity and private network feature set
- Mobile WiMAX compliance based on IEEE 802.16e standard and WiMAX Forum Wave2 (MI-MO) certification
- Lowest frequency use: leverages OFDMA and built-in GPS to enable users to deploy an entire network on a single frequency channel
- Quality of service: separate traffic types over the air and guarantee latency, minimum bandwidth and jitter, according to application needs
- Stand-alone architecture: does not require an entire network infrastructure to be in place, while maintaining the interoperability and technology advances of broadband wireless
- Improved security: built-in features ensure NERC CIP compliance, such as two-factor mutual authentication and AES encryption
- Operating temperature from -40 °C to +75 °C

## Introduction

MoComp – made to move.

### Overview

#### **We keep things moving ...**

... in all kinds of weather, year in and year out, around the world, optimized for your vehicle. Components in the MoComp product family make this possible including superior pantographs, auxiliary traction converters, motors, gear units, brake systems, and bogies for all types of rail vehicle.

The products as well as complete propulsion systems are developed, produced, and tested using state-of-the-art methods and technologies. Whether for individual components or an optimized overall system, our focus is always on energy efficiency, weight management, system integration, and reliability. We're your reliable partner with proven expertise, innovations, and competitive technologies.

#### **Railway components that can do more**

With the MoComp product family, you benefit from over 140 years of experience. But our railway components can do even more. They were developed by a vehicle manufacturer – always with your vehicle and its performance in mind – as an individual product or system. In partnership with you, we develop your application to suit your requirements and the needs of your customers.

#### **Your partner for innovation**

Many innovations are developed off the beaten track using the latest technologies and materials and with the help of experience, a pioneering spirit, comprehensive expertise, and good ideas:

- Systems for using alternative energies like batteries or hydrogen
- Space-optimized and extremely aerodynamic pantographs
- Lightweight bogies
- Permanent magnet synchronous machines
- High-speed asynchronous machines with optimized gear units
- Auxiliary and traction converters with the latest IGBT and silicon carbide technology
- Highly efficient closed-loop control
- Digitalization and monitoring
- Highly efficient open-loop control
- Airless brake system

#### **We're there for you – on site and around the world**

As a system supplier, we provide you with the complete powertrain from a single source, from the main switch to the wheel. We're by your side throughout the entire product lifecycle, exactly where you need us! We support you worldwide with Siemens Mobility's extensive manufacturing and service organization for local content, interface-optimized logistics and communication processes, and guaranteed services. You benefit from high energy efficiency and perfect vehicle performance as well as optimized service intervals for low lifecycle costs.

#### **Spotlight**

One special highlight is our development of the airless, electrohydraulic brake system, whose control system is fully integrated in the drive control. As a result, your vehicle is ready for operation sooner, your compressed air supply can be smaller, weight is lower, and more installation space is available for other components. Headways are also shorter because the brake can release much more quickly and the train requires much less time to get moving after the doors are closed.

Our new airless brake system is the world's first completely electrohydraulic friction brake to be used in rail vehicles (brake by wire).

Find out more about railway components from Siemens Mobility: [www.siemens.com/mocomp](http://www.siemens.com/mocomp)

## MoComp™

## Pantographs

- Core functionality
  - Ensures safe and stable high voltage connection between overhead contact line and the vehicle
- Key technical data
  - Working range: Standard: 2400 mm, optional: 2700 mm
  - Rated voltage: 25 kV, 15 kV, 3 kV, 1,5 kV and below
  - Rated currents: Up to 4000 A
  - Vehicle speeds: Up to 400 km/h

## Traction converters

- Technical data
  - Rated voltages: 600 / 3000 V DC, 15 / 25 kV AC
  - Rated powers: 250 to 4800 kW
- Features
  - Air cooling (forced), heat pipe, water cooling
  - Good scalability of the power ratings
  - High power density with compact dimensions
  - The complete temperature range is covered

## Auxiliary converters

- Technical data
  - Rated voltage: 600 / 750 V DC; 1000 V AC; 1500 / 3000 V AC / DC
  - Rated power: 20 kVA to >200 kVA (6 up to 60 kW)
  - Output voltage: 24 V – 110 V AC / 3 AC / 3 AC+N, fixed / variable frequency
  - Efficiency: > 92%
  - Mounting location: underfloor, roof, machinery room
- Features
  - Fully and partially redundant
  - Air cooling (airstream when moving or forced), water cooling
  - Ambient temperatures: -40° C to +55° C

## Bogies

- Technical data
  - Axle load: 9 – 32 t
  - Speed: 70 – 360 km/h
  - Floor height : 350 – 1250 mm
  - Gauge : 1000, 1067, 1435, 1520, 1600, 1668, 1676 mm
- Features
  - Welded bogie frame with steel plates combined with cast and/or forged parts
  - High density of integration
  - Optimized degree of material utilization by application of high sophisticated simulation & validation methods

## Gear units

- Technical data
  - Gear ratio: 2.4 up to 17.8
  - Motor torque: 370 up to 10,800 Nm
  - Service speed: up to 385 km/h
- Features
  - Helical- and bevel gear units
  - One or more stage gear units
  - Our gearboxes have minimal wear and are designed for a long service life
  - Housing made of ductile iron or aluminum

## Traction motors

- Technical data
  - Rated power: 45 up to 1633 kW
  - Rated torque: 210 up to 13,000 Nm
  - Speed: up to 8000 rpm
- Features:
  - Widest range of enclosure types (encapsulated / open)
  - Various cooling methods (air or water cooled)
  - Nose suspended, fully suspended drive, longitudinal drive, fully integrated PSM drive
  - Ambient temperatures: -40 °C to 55 °C

## Brake systems

- Description
  - The innovative and proven Siemens Brake is characterized by high safety, high serviceability and its ability to perform all necessary aspects to deliver a complete and approved brake system for all types of rail vehicles
- Features
  - Innovative and economic brake solutions
  - Electro pneumatic Brake Systems
  - Air-free Brake System
  - Modern electronic brake control unit with synergies as combined drive & brake control unit
  - Modular pneumatic control systems (car / bogie wise brake control, etc.)

## Introduction

### Medium-Voltage Components

1

#### Overview

##### Vacuum interrupters for medium voltage switching devices

- Extremely safe switching and long service life due to vacuum design
- Many years of manufacturing experience, with more than 5 million interrupters supplied
- Customer-specific development according to OEM customer requirements
- High product variance for different switching applications
- Use in:
  - Medium- and low-voltage switching devices
  - Medium-voltage contactors, circuit breakers, load-break switches and switch disconnectors for railway applications

##### 3AH47 VCB for traction applications

- Rated voltages up to 27.5 kV, frequencies of 16.7 - 60 Hz, Rated current up to 2500 A
- Rated short-circuit breaking current up to 50 kA
- 1-, 2- and 3-pole version
- Vertical pole assembly fixed to operating mechanism via post insulators
- Customer benefits:
  - compact & high mechanically stable design
  - various additional equipment available
  - economical integration
  - competent consultation by our experts

**Overview****Siemens surge arresters for railway applications – reliable, stable and safe overvoltage protection**

Siemens has been designing and manufacturing surge arresters for all kinds of applications since 1925. For more than 80 years we've been manufacturing surge arresters for rail systems. Continuous research and development, the wealth of Siemens know-how, and comprehensive worldwide experience give Siemens surge arresters a leading edge in overvoltage protection. Their uncompromising quality ensures a long service life and the highest reliability in any application.

Siemens surge arresters are an indispensable aid to insulation coordination in electrical power systems. Valuable equipment, such as traction vehicles, is optimally protected against lightning and switching overvoltages. Siemens surge arresters have been designed to meet the requirements of a wide range of common installation environments, from arctic cold to the heat of the desert and the dampness of tropical climates.

All Siemens surge arresters feature a superior sealing system that reliably prevents moisture ingress to ensure the highest possible degree of overvoltage protection and decades of trouble-free service.

**3EB4 surge arrester for railway applications**

- Housing made of glass fiber reinforced plastic (FRP) tube and silicone rubber sheds
- For AC systems up to 25 kV
- For DC systems up to 3 kV
- Train speeds up to 420 km/h
- Short circuit current capability 50 kA
- Tested according to IEC 60099-4 (AC version) and EN 50526-1 (DC version)
- Fire test according to DIN EN 45545-2
- Shock and vibration test according to IEC 61373
- For use on:
  - High-speed trains and intercity trains
  - Commuter and regional trains
  - (Multi-traction) locomotives
  - Urban transportation (light rail, metros and tram cars)

**3EB5 surge arrester for railway applications**

- Cage design™ with directly molded silicone rubber housing
- For AC systems up to 25 kV
- For DC systems up to 3 kV
- Travel speed up to 200 km/h
- Short circuit current capability 65 kA
- Tested according to IEC 60099-4 (AC version) and EN 50526-1 (DC version)
- Fire test according to DIN EN 45545-2
- Shock and vibration test according to IEC 61373
- For use on:
  - Intercity trains
  - Commuter and regional trains
  - (Multi-traction) locomotives
  - Urban transportation (light rail, metros and tram cars)

### 2/3 Power contactors for switching motors

- 2/3 Introduction
- 2/6 General data
- 2/13 SIRIUS 3RT contactors, 3-pole up to 250 kW
- Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays
- 2/52 - General data
- 2/55 - Auxiliary switches, instantaneous
- 2/64 - Link modules
- 2/69 - Connection modules/adapters
- 2/72 - Covers
- 2/73 - Miscellaneous accessories
- Spare parts for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays
- 2/74 - Solenoid coils
- 2/75 - Contacts and arc chutes

### 2/76 Contactors for special applications

- 2/76 Introduction
- 2/79 SIRIUS 3RT.4 contactors for weak or non-inductive loads (AC-1), 3-pole up to 2 650 A
- 2/88 SIRIUS 3RT.3 contactors, 4-pole, up to 525 A
- 2/97 SIRIUS 3RT25 contactors, 4-pole, 2 NO + 2 NC
- Containers for railway applications
- 2/101 - SIRIUS 3RT contactors with extended operating range, 3-pole
- 2/109 - SIRIUS 3RH2 contactor relays with extended operating range
- 2/111 - 3TC contactors for switching DC voltage, 2-pole
- 2/113 3TC contactors for switching DC voltage, 1- and 2-pole

### 2/124 Contactor relays

- 2/124 Introduction
- 2/125 SIRIUS 3RH2 contactor relays, 4- and 8-pole
- 2/135 3TH4 contactor relays, 8- and 10-pole
- 2/142 - Accessories for 3TH4 contactor relays

### 2/143 Coupling relays

- 2/143 Introduction
- 2/144 SIRIUS 3RQ1 force-guided coupling relays, fail-safe up to SIL 3 / PL e
- 2/151 SIRIUS 3RQ2 coupling relays with industrial enclosure
- 2/154 SIRIUS 3RQ3 coupling relays, narrow design

### 2/162 Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

- 2/162 Introduction
- 2/163 General data
- 2/177 For motor protection
- 2/185 For motor protection with overload relay function
- 2/187 For starter combinations
- 2/190 For transformer protection
- 2/194 For system protection
- Accessories
- 2/195 - Mountable accessories
- 2/198 - Busbar accessories
- 2/201 - Mounting accessories
- 2/206 3RV29 infeed system

### 2/214 Relays

#### Timing relays

- 2/214 General data
- 2/215 SIRIUS 3RP25 timing relays, 17.5 mm and 22.5 mm
- 2/227 SIRIUS 3RP20 timing relays, 45 mm
- SIRIUS 3RR21, 3RR22 monitoring relays for mounting on 3RT2 contactors
- 2/233 Current and active current monitoring
- SIRIUS 3RR24 monitoring relays for mounting on 3RT2 contactors for IO-Link
- 2/241 Current and active current monitoring
- SIRIUS 3UG5 monitoring relays for stand-alone installation
- 2/248 DC load monitoring
- SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation
- 2/253 General data
- 2/255 Line monitoring
- 2/260 Voltage monitoring

### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

- 2/282 General data
- 2/285 Line monitoring
- 2/288 Voltage monitoring
- 2/291 Current monitoring
- 2/294 Power factor and active current monitoring
- Residual-current monitoring
- 2/298 - Residual-current monitoring relays
- 2/301 Speed monitoring
- 2/304 Accessories
- SIRIUS 3RS2 temperature monitoring relays
- 2/305 General data
- 2/313 Basic units
- 2/314 Accessories

### **SIRIUS 3SE5 mechanical position switches**

- 2/315 Introduction
- 2/318 General data
- 2/325 Compact design
- 3SE5, open-type design
- 2/327 - Enclosure width 30 mm

### **SIRIUS 3SE5, 3SE2 mechanical safety switches**

- With separate actuator
- 2/328 General data
- With tumbler
- 2/330 General data

### **SIRIUS 3SE5, 3SE2 mechanical safety hinge switches**

- 2/333 General data

### **SIRIUS 3SE5 mechanical position switches for ambient temperatures down to -40 °C**

- Shock and vibration test
- SIRIUS 3SE5 mechanical position switches
- 2/334 - 3SE5, plastic enclosures
- SIRIUS 3SE5 mechanical safety switches with tumbler
- 2/335 - 3SE5, plastic enclosures
- SIRIUS 3SE5 mechanical safety hinge switches
- 2/336 - 3SE5, plastic enclosures
- Shock and vibration test according to railway standard
- SIRIUS 3SE5 mechanical position switches
- 2/337 - 3SE5, plastic enclosures
- 2/340 - 3SE5, metal enclosures
- SIRIUS 3SE5 mechanical safety switches with separate actuator
- 2/345 - 3SE5, plastic enclosures/metal enclosures
- SIRIUS 3SE5 mechanical safety switches with tumbler
- 2/346 - 3SE5, plastic enclosures

### **SIRIUS ACT pushbuttons and indicator lights**

- 2/347 Introduction
- 2/350 General data
- Actuators and indicators, 22 mm, round, plastic, black
- 2/366 Actuating and signaling elements
- Actuators and indicators, flat, 30 mm, metal, matte
- 2/379 Actuating and signaling elements
- Actuators and indicators, customized designs
- 2/383 Special locks
- 2/384 Laser inscriptions
- Holders
- 2/385 Holders without module
- Modules
- 2/386 Contact modules
- 2/389 LED modules
- Enclosures
- 2/392 General data
- 2/393 Empty enclosures
- Accessories
- Labels
- 2/394 - Insert labels
- 2/397 - Label holders for labeling plates
- 2/399 - Labeling plates
- 2/406 - Labeling plates for enclosures
- 2/410 - Labels for laser printers
- 2/411 - Other labels
- 2/414 Protection/access protection
- 2/420 Actuators
- 2/423 Enclosures
- 2/425 Miscellaneous accessories

## Switching devices – Contactors and contactor assemblies – for switching motors

### Power contactors for switching motors

#### General data

#### Overview

##### The SIRIUS family of controls

The SIRIUS modular system with its components for the switching, starting, protection and monitoring of motors and industrial systems stands for the fast, flexible and space-saving construction of control cabinets.

##### 3RT2.1 contactors · Size S00 with mountable accessories

The figure shows the version with screw terminals

① Contactor, size S00

② 2-pole auxiliary switch, laterally mountable

③ 1-pole auxiliary switch, for snapping onto the front cable entry from the top

④ 2-pole auxiliary switch, for snapping onto the front cable entry from the bottom

⑤ 4-pole auxiliary switch, for snapping onto the front

⑥ 3RA27 function module for AS-Interface

⑦ 3RA27 function module for IO-Link

⑧ 3RA28 function module

⑨ Surge suppressor with/without LED

⑩ Cover, sealable

⑪ 3-phase infeed terminal

⑫ Star jumper, 3-pole, without connecting terminal

⑬ Link for paralleling, 3-pole, with connecting terminal

⑭ Solder pin adapter

⑮ Connection module (adapter and connector) for contactors with screw terminals

⑯ Safety main current connector for two contactors

Assembly kit 3RA2913-2AA1

Consisting of:

⑰ Wiring modules on the top and bottom for connecting the main, auxiliary and control current paths, electrical interlock<sup>1)</sup> included, interruptible (NC contact interlock)

⑱ Mechanical interlocks<sup>2)</sup>

⑲ Two connecting clips for two contactors<sup>2)</sup>

○ For contactors

● For contactors and coupling contactors

<sup>1)</sup> 3RT201. contactors with one NC contact in the basic unit are required for the electrical interlock. An additional NO contact is required for momentary-contact operation.

<sup>2)</sup> The parts ⑱ and ⑲ can only be ordered together as 3RA2912-2H mechanical connectors.

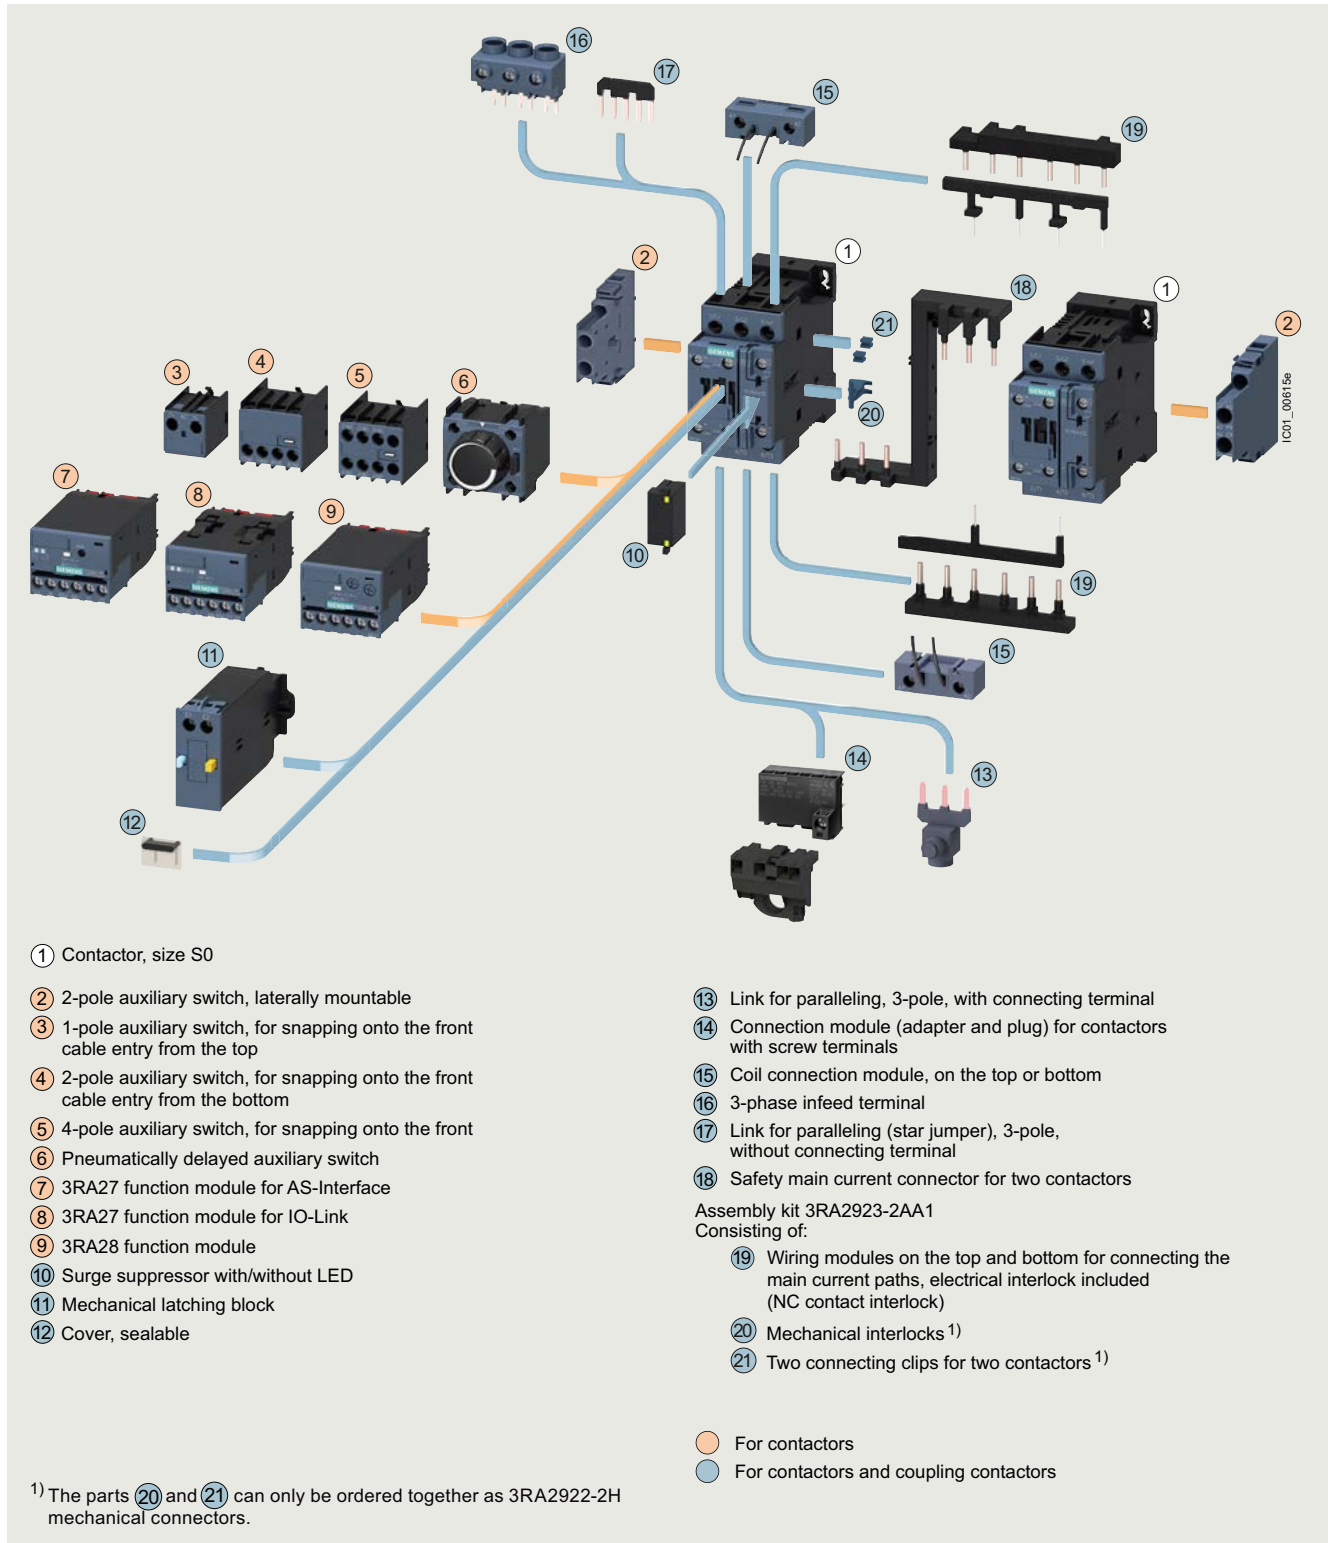

# Switching devices – Contactors and contactor assemblies – for switching motors

## Power contactors for switching motors

General data

### 3RT2.2 contactors · Size S0 with mountable accessories

The figure shows the version with screw terminals

Accessories and spare parts, see pages 2/52 to 2/75.

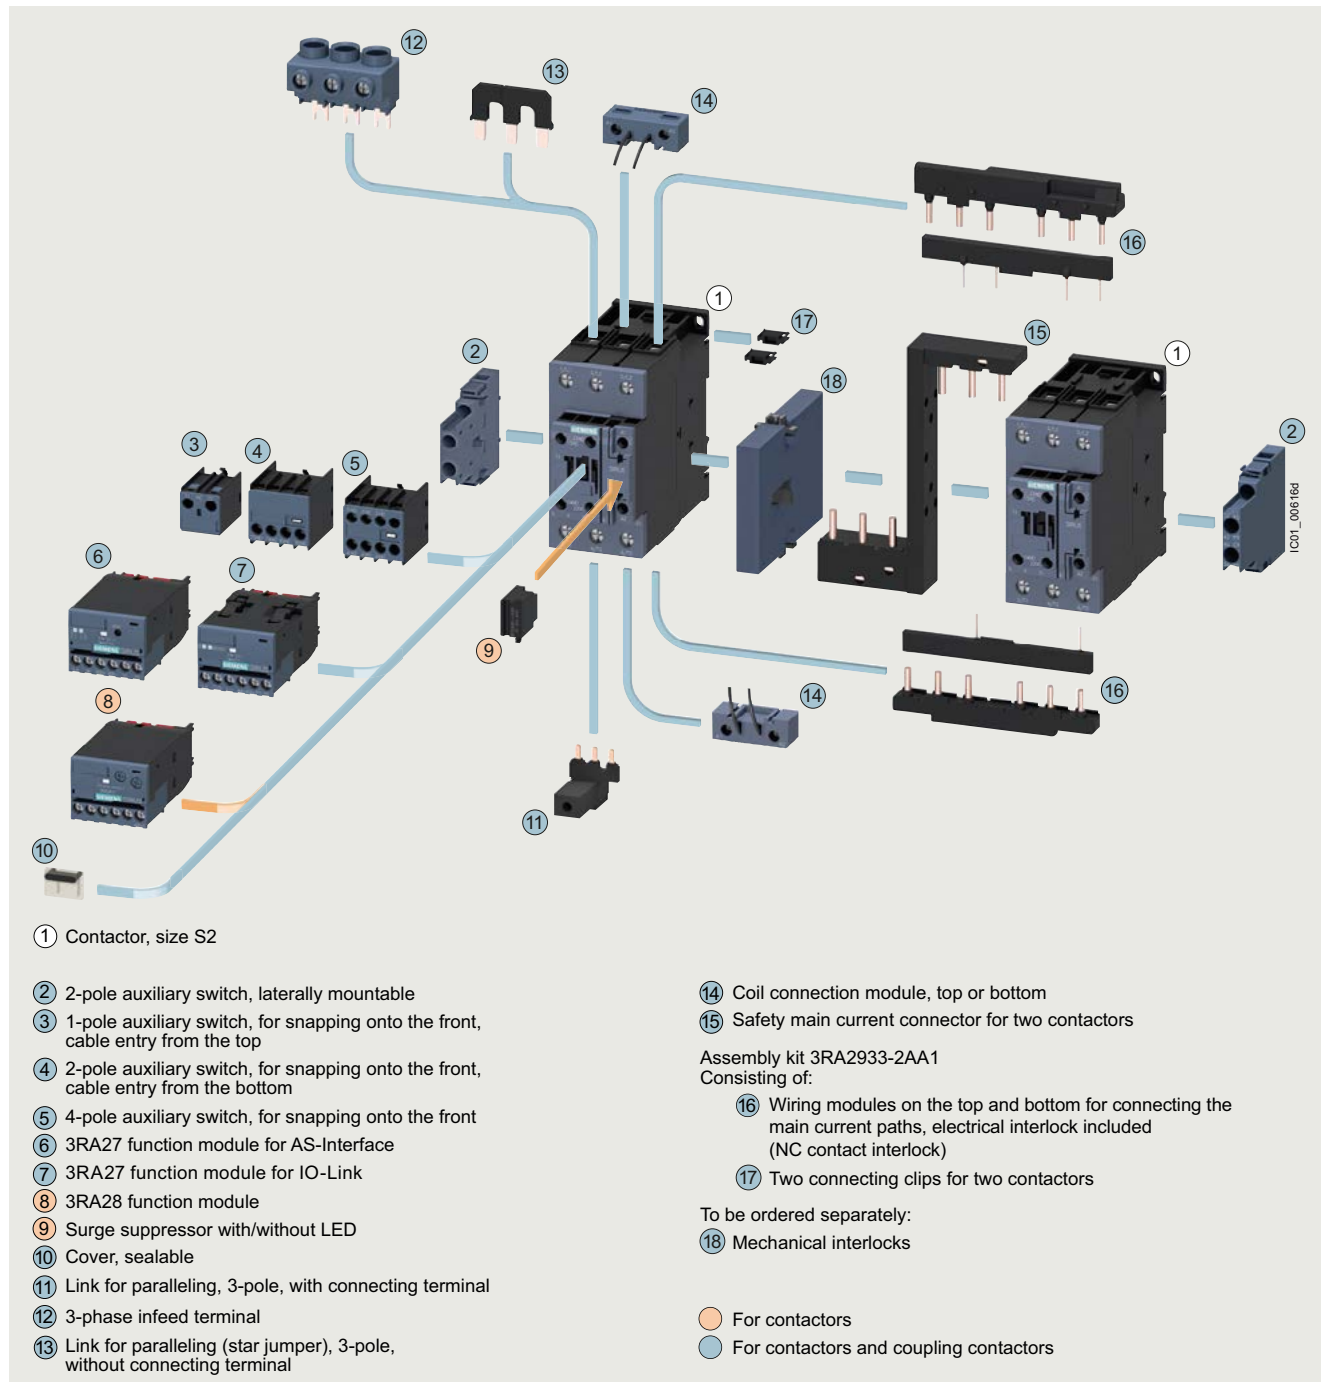

## Switching devices – Contactors and contactor assemblies – for switching motors

### Power contactors for switching motors

#### General data

#### 3RT2.3 contactors · Size S2 with mountable accessories

The figure shows the version with screw terminals

Accessories and spare parts, [see pages 2/52 to 2/75](#).

# Switching devices – Contactors and contactor assemblies – for switching motors

## Power contactors for switching motors

General data

### 3RT2.4 contactors · Size S3 with mountable accessories

The figure shows the version with screw terminals

① Contactor, size S3

② 2-pole auxiliary switch block, laterally mountable

③ 1-pole auxiliary switch block, for snapping onto the front, cable entry from the top

④ 2-pole auxiliary switch block, for snapping onto the front, cable entry from the bottom

⑤ 4-pole auxiliary switch block, for snapping onto the front

⑥ 3RA27 function module for AS-Interface

⑦ 3RA27 function module for IO-Link

⑧ 3RA28 function module

⑨ Surge suppressor with/without LED (Varistor, diode assembly), can be plugged in on the front

⑩ Surge suppressor without LED (RC element), can be plugged in on the front in the recesses on the left next to the connection block

⑪ Cover, sealable

⑫ Links for paralleling, 3-pole, with connecting terminal

⑬ Coil connection module, top or bottom

⑭ Links for paralleling (star jumper), 3-pole without connecting terminal

⑮ Auxiliary terminal, 3-pole

⑯ Single-phase infeed terminals (3 units)

Assembly kit 3RA2943-2AA1

Consisting of:

⑰ Wiring modules on the top and bottom for connecting the main, auxiliary and control current paths, electrical interlock<sup>1)</sup> included, interruptible (NC contact interlock)

⑱ Two connectors for two contactors

To be ordered separately:

⑲ Mechanical interlock

<sup>1)</sup> 3RT201. contactors with one NC contact in the basic unit are required for the electrical interlock. An additional NO contact is required for momentary-contact operation.

○ For contactors

● For contactors and coupling contactors

Accessories and spare parts, see pages 2/52 to 2/75.

## Switching devices – Contactors and contactor assemblies – for switching motors

### Power contactors for switching motors

#### General data

#### 3RT105 and 3RT145 contactors - Size S6 with mountable accessories

Accessories 3 to 7 and 12 to 17 can be mounted onto contactors 1 and 2 respectively.

① 3RT105 and 3RT145 air-break contactors, size S6 (version without withdrawable coil)

② 3RT105.-P and 3RT145.-P air-break contactors with solid-state operating mechanism and remaining lifetime indicator, size S6 (version with withdrawable coil and laterally mountable add-on module)

#### Can be mounted onto the front of contactors ① and ②

- ③ 3RT1926: Auxiliary switch, electronically delayed (ON-delay or OFF-delay or star-delta (wye-delta) starting)
- ④ 3RH192: 4-pole auxiliary switch
- ⑤ 3RH192: 1-pole auxiliary switch (max. four can be snapped on)
- ⑥ 3RT1926-4MA10: Cover, sealable

#### Can be mounted onto the side of contactors ① and ②

- ⑦ 3RH192: 2-pole auxiliary switch

#### Can be inserted in top of contactors

- ⑧ 3RT1955-5A.3.: Withdrawable coil, standard operating mechanism
- ⑨ 3RT1955-5N.3.: Withdrawable coil, solid-state operating mechanism
- ⑩ 3RT1955-5P.3.: Withdrawable coil, solid-state operating mechanism and remaining lifetime indicator

#### Can be plugged onto the top of contactor operating mechanisms ⑧ and ⑨

- ⑪ 3RT1956-1C: Surge suppressor (RC element)

#### Can be mounted onto the top or bottom on busbars or box terminals of contactors ① and ②

- ⑫ 3RT1956-4G: Box terminal block
- ⑬ 3TX7500-0A: Auxiliary terminal, 1-pole
- ⑭ 3TX6526-3B: Terminal cover (can be screwed on), covers one busbar connection
- ⑮ 3RT1956-4EA1: Terminal cover for busbar connection and on box terminal
- ⑯ 3RT1956-4EA3: Terminal cover for busbar connection
- ⑰ 3RT1956-4EA2: Terminal cover on box terminal
- ⑱ 3RT1956-4EA4: Terminal cover for busbar connection, covers ⑮, ⑯ and ⑱ can be mounted

Accessories and spare parts, see pages 2/52 to 2/75.

# Switching devices – Contactors and contactor assemblies – for switching motors

- Can be mounted onto the side of contactors ① and ②**
- ⑦ 3RH192: 2-pole auxiliary switch

**Can be inserted in top of contactors**

- ⑧ 3RT1975-5A.3.: Withdrawable coil, standard operating mech.
- ⑨ 3RT1975-5N.3.: Withdrawable coil, solid-state operating mech.
- ⑩ 3RT1975-5P.3.: Withdrawable coil, solid-state operating mech. and remaining lifetime indicator

**Can be plugged onto top of contactor operating mechanisms ⑧ and ⑨**

- ⑪ 3RT1956-1C: Surge suppressor (RC element)

**Can be mounted at the top or bottom on busbars or box terminals of contactors ① and ②**

- ⑫ 3RT1966-4G: Box terminal block
- ⑬ 3TX6546-3B: Terminal cover (can be screwed on), covers one busbar connection
- ⑭ 3RT1966-4EA1: Terminal cover for busbar connection and on box terminal
- ⑮ 3RT1966-4EA3: Terminal cover for busbar connection
- ⑯ 3RT1966-4EA2: Terminal cover on box terminal

Accessories and spare parts, see pages 2/52 to 2/75.

# Switching devices – Contactors and contactor assemblies – for switching motors

## Power contactors for switching motors

SIRIUS 3RT contactors, 3-pole up to 250 kW

### Overview

Contactors with screw terminals: 3RT20 (sizes S00 to S3) and 3RT10 (sizes S6 to S12)

### 3RT power contactors

Our power range:

- Contactors for switching motors:
  - Size S00: 3RT201 up to 7.5 kW
  - Size S0: 3RT202 up to 18.5 kW
  - Size S2: 3RT203 up to 37 kW
  - Size S3: 3RT204 up to 55 kW
  - Sizes S6 to S12: 3RT10 up to 250 kW
- Vacuum contactors for switching motors:
  - Sizes S10 and S12: 3RT12 up to 250 kW
  - Size 14: 3TF6 up to 450 kW

### Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

### Ambient conditions

If the devices are used in ambient conditions which deviate from common industrial conditions (IEC 60721-3-3 "Stationary Use, Weather-Protected"), information must be obtained about possible restrictions with regard to the reliability and endurance of the device and possible protective measures. In this case, contact our Technical Support:

[www.siemens.com/support-request](http://www.siemens.com/support-request)

### Ratings of three-phase motors

The quoted rating (in kW) refers to the output power on the motor shaft (according to the nameplate).

The power rating specifications of the contactors in kW (in accordance with IEC 60947-4-1, Table G) are guide values for 4-pole standard motors at 50 Hz AC and specified voltage (e.g. 400 V). The actual starting and rated data of the motor to be switched must be considered when selecting the units. The motor current, motor protection device and the permissible contactor current according to the utilization category must be aligned with each other.

### Voltage specifications

The specifications for 3-phase systems acc. to IEC 60947-4-1 apply for the following line system configurations:

Voltage data $U_e$ in the catalog	Line system configurations	
	Three-phase Four-wire systems	Three phase Three-wire systems
V	V	V
230	--	230
400	230/400	400
440	260/440	440
500	--	500
690	400/690	690 (from size S3 only)
1 000	--	1 000

-- Not specified

### Contactors in safety-related applications

Contactors are a significant part of safety-related applications. They are generally the actuators that perform the switching operation leading to the safe disconnection of the corresponding application or system.

Contactors with mirror contacts according to IEC 60947-4-1 are generally required for use in safety-related applications. Most of our contactors meet this requirement; a corresponding note can be found in the technical product data sheet.

## Switching devices – Contactors and contactor assemblies – for switching motors

### Power contactors for switching motors

#### SIRIUS 3RT contactors, 3-pole up to 250 kW

##### Contactors with increased tamper protection

Increased tamper protection is ensured either by using our contactor versions with factory-installed, permanently mounted auxiliary switches protected against mechanical external actuation (e.g. 3RT20...-3MA0 or 3RT10...-3PA0 contactors), or by using the 3RT2916-4MA10 or 3RT1926-4MA10 sealable cover as an accessory (see page 2/72).

##### Operating times

Operating times using the example of contactor 3RT1054-1AB36

##### Main circuit

###### Short-circuit protection

For short-circuit protection of contactors with overload relays or of load feeders, refer to the Configuration Manuals, see "More information" on page 2/18.

###### Surge suppression

Contactors supplied without a coil circuit can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of diode and Zener diode for short break times) for damping opening surges in the coil.

###### Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are attenuated against voltage peaks. Different accessories are available for the contactors (time change with: interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, see [Equipment Manual](#).

##### Control circuit

###### Connection methods

Screw terminals or spring-loaded terminals

###### Electromagnetic compatibility (EMC)

The contactors fulfill the requirements for environment category A.

###### Note:

When the contactors are used in an **environment with frequency converters**, the configuration notes must be observed, see [Equipment Manual](#).

##### Auxiliary circuit

###### Connection methods

Screw terminals or spring-loaded terminals

###### Contact reliability

If voltages  $\leq 110$  V and currents  $\leq 100$  mA are to be switched, the auxiliary contacts of the 3RT contactors or 3RH contactor relays should be used as they guarantee a high level of contact reliability.

These auxiliary contacts are particularly suitable for solid-state circuits with currents  $\geq 1$  mA at a voltage  $\geq 17$  V.

# Switching devices – Contactors and contactor assemblies – for switching motors

## Power contactors for switching motors

### SIRIUS 3RT contactors, 3-pole up to 250 kW

#### 3RT20 contactors

##### Main circuit

###### Connection methods

- 3RT201 and 3RT202 contactors:  
Screw terminals or spring-loaded terminals;  
spring-loaded terminals with convenient plug-in design for device connectors
- 3RT203 and 3RT204 contactors:  
Screw terminals with box terminal;  
direct connection to the connecting bar is possible with cable lugs for 3RT204 when the box terminal is removed.

###### Short-circuit protection

Short-circuit protection of 3RT20 contactors without overload relays, [see pages 2/23, 2/28, 2/31 and 2/35](#).

For fuseless assembly of motor feeders consisting of 3RV2 motor starter protector and 3RT20 contactor, selection aids are available, [see "SIRIUS 3RA2 load feeders"](#).

###### Motor protection

For protection against overload, 3RU2 thermal overload relays or 3RB3 electronic overload relays can be mounted on the 3RT20 contactors.

###### Plant and application monitoring

For monitoring and measuring in the application, 3RR2 monitoring relays can be mounted on the 3RT20 contactors.

###### Surge suppression

- 3RT201 contactors:  
The surge suppressors are plugged onto the front of the contactors here. Space is provided for them next to a snap-on auxiliary switch.
- 3RT202 and 3RT203 contactors:  
Surge suppressors (varistors, RC elements or diode assemblies) can be plugged into the front of the contactors.
- 3RT204 contactors:  
The varistors and diode combinations are plugged into the front of the contactors. The RC element is plugged into the two recesses on the front of the contactor to the left of the terminal block for the auxiliary switches.

##### Control circuit

###### Contactors with voltage tap-off

The 3RT20 contactors with voltage tap-off are special versions for mounting the SIRIUS 3RA27 function modules for connection to the control system via IO-Link or AS-Interface.

Without a function module, these contactors can be used like the standard versions.

###### Operating mechanism types

3RT20 contactors are available as standard versions with AC or DC operating mechanisms or as versions with a wide-range solid-state operating mechanism and a universal actuating voltage (AC or DC operation possible).

Versions with solid-state operating mechanisms for AC or DC operation with a fail-safe PLC input are also available for the 3RT203 and 3RT204 contactors.

Control takes place via the control supply voltage connection A1 - A2 with varying operating ranges ([see relevant product data sheet](#) for further details).

DC coupling contactors with reduced power consumption are also ideally suited for connection to the controller.

###### Solenoid coils/operating mechanisms

Coil replacement is possible for contactors 3RT202 to 3RT204.

###### NOTICE:

Removal or changing of the operating mechanism is not permitted for 3RT20...S contactors with fail-safe control.

##### Auxiliary circuit

###### Auxiliary contact complement

- 3RT201 contactors: An auxiliary contact is integrated in the basic unit.
- Contactors 3RT202 to 3RT204: The basic units contain two integrated auxiliary contacts (1 NO + 1 NC).

All basic units, with the exception of coupling contactors in sizes S00 and S0, can be expanded using auxiliary switches.

For detailed information about the fitting of auxiliary switches, [see pages 2/55 to 2/58](#).

## Switching devices – Contactors and contactor assemblies – for switching motors

### Power contactors for switching motors

#### SIRIUS 3RT contactors, 3-pole up to 250 kW

##### 3RT10 contactors

###### Main circuit

###### Connection methods

Screw terminals with connecting bars that the cables can be connected to using either cable lugs or flexible or rigid busbars. Alternatively, box terminals are available as accessories.

###### Short-circuit protection

For short-circuit protection of 3RT10 contactors without overload relays, [see page 2/39](#).

###### Motor protection

For protection against overload, 3RB2 electronic overload relays ([see page 2/79 onwards](#)) can be mounted on the 3RT10 contactors.

###### Control circuit

###### Operating mechanism types

The operating mechanisms are powered via a supply voltage with an operating range from 0.8 to  $1.1 \times U_s$ , optionally also controlled depending on the chosen mode of operation. Various rated voltage ranges are available for AC/DC control.

The following control and/or operating mechanism versions are available for contactors 3RT105 to 3RT107:

- 3RT10...A:  
Standard operating mechanism for AC and DC operation (reduced power consumption when closing and in the closed state)
- Solid-state operating mechanisms  
Overvoltage damping of the operating mechanism coil is already integrated in the electronics for contactors with solid-state operating mechanisms.  
The following versions are available:
  - 3RT10...N:  
With two operating modes: Direct control or via PLC input (24 V DC)
  - 3RT10...P:  
Control via PLC input (24 V DC) only, but with additional remaining lifetime indicator (RLT)
  - 3RT10...S:  
Control via fail-safe PLC input (24 V DC) only, for simplification of safety applications (without mode of operation selection)

###### Solenoid coils/operating mechanisms

The operating mechanisms for 3RT10...A/-N/-P contactors are removable and can be replaced simply by unlocking and pulling them out.

###### NOTICE:

Removal or changing of the operating mechanism is not permitted for 3RT10...S contactors with fail-safe control.

###### Surge suppression

Exchangeable operating mechanisms with integrated coil circuit (varistor) are available.

###### Auxiliary circuit

###### Auxiliary contact complement

These contactors are supplied with two laterally mounted auxiliary switches. The fitting of auxiliary switches is possible on the front and on the side.

## Power contactors for switching motors

### SIRIUS 3RT contactors, 3-pole up to 250 kW

Type **3RT2 contactors**  
Size **S00 and S0**

#### Contact endurance of the main contacts

The characteristic curves show the contact endurance of the contactors when switching low inductive or non-inductive AC loads (AC-1) and motor-driven loads (AC-3) depending on the breaking current and rated operational voltage. It is assumed that the operating mechanisms are switched randomly, i.e. not synchronized with the phase angle of the supply system.

The rated operational current  $I_e$  complies with utilization category AC-4 (breaking 6 times the rated operational current) and is intended for a contact endurance of approximately 200 000 operating cycles.

If a shorter contact endurance is sufficient, the rated operational current  $I_e/AC-4$  can be increased.

If the contacts are used for mixed operation, i.e. normal switching (breaking the rated operational current according to utilization category AC-3) in combination with intermittent inching (breaking of several times the rated operational current according to utilization category AC-4), the contact endurance can be calculated approximately from the following equation:

$$X = \frac{A}{1 + \frac{C}{100} \left( \frac{A}{B} - 1 \right)}$$

Characters in the equation:

- X Contact endurance for mixed operation in operating cycles
- A Contact endurance for normal operation ( $I_a = I_e$ ) in operating cycles
- B Contact endurance for inching ( $I_a = \text{multiple of } I_e$ ) in operating cycles
- C Inching operations as a percentage of total switching operations

Size	S6		S10	S12			
<b>General data</b>							
<b>Dimensions (W x H x D)</b>							
<ul style="list-style-type: none"> <li>Basic unit</li> <li>Basic unit with mounted auxiliary switch</li> </ul>			mm	120 x 172 x 170	145 x 210 x 202	160 x 214 x 225	
			mm	120 x 172 x 217	145 x 210 x 251	160 x 214 x 271	
<b>Permissible mounting position</b>							
The contactors are designed for operation on a vertical mounting surface.							
<b>Mechanical service life</b>							
	Operating cycles			10 million			
<b>Electrical endurance</b>							
<b>Rated insulation voltage <math>U_i</math></b> (pollution degree 3)			V	1 000			
<b>Rated impulse withstand voltage <math>U_{imp}</math></b>							
• Auxiliary circuit			kV	6			
• Main circuit			kV	8			
<b>Protective separation</b> between the coil and the main contacts acc. to IEC 60947-1, Annex N			V	690			
<b>Mirror contacts</b>							
A mirror contact is an auxiliary NC contact that cannot be closed simultaneously with an NO main contact.				Yes, acc. to IEC 60947-4-1, Annex F			
<b>Permissible ambient temperature</b>							
• During operation			°C	-25 ... +60			
• During storage			°C	-55 ... +80			
<b>Degree of protection IP on the front</b> according to IEC 60529							
				IP00 (IP20 with box terminal/cover)			
<b>Touch protection on the front</b> acc. to IEC 60529							
				Finger-safe for vertical touching from the front with box terminal/cover			
<b>Shock resistance</b>							
• Rectangular pulse			g/ms	8.5/5 and 4.2/10			
• Sine pulse			g/ms	13.4/5 and 6.5/10			
<b>Electromagnetic compatibility (EMC)</b>							
				See page 2/14			
<b>Short-circuit protection</b>							
<b>Main circuit</b>							
Fuse links, operational class gG: LV HRC, type 3NA; DIAZED, type 5SB; NEOZED, type 5SE according to IEC 60947-4-1							
• Type of coordination "1"			A	355	500	630	
• Type of coordination "2"			A	250	315	400	500
• Weld-free			A	80	160	250	315
<b>Auxiliary circuit</b>							
Short-circuit test							
• With fuse links of operational class gG: DIAZED, type 5SB; NEOZED, type 5SE with short-circuit current $I_k = 1$ kA acc. to IEC 60947-5-1			A	10			
• With miniature circuit breakers with C characteristic with short-circuit current $I_k = 400$ A			A	10			
Short-circuit protection for contactors with overload relays							
				See Configuration Manual for load feeders

## Power contactors for switching motors

### Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

#### Overview

Extensive accessories and spare parts are available for SIRIUS 3RT power contactors and SIRIUS 3RH2 contactor relays.

These components are easily fitted to the contactors without the use of any tools according to requirements.

Overview graphics with mountable accessories:

- 3RT2 contactors, [see pages 2/6 to 2/9](#)
- 3RT10, 3RT12 and 3RT14 contactors, [see pages 2/10 to 2/12](#)
- 3RH2 contactor relays, [see page 2/125](#)

## Switching devices – Contactors and contactor assemblies – for switching motors

### Power contactors for switching motors

#### Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > General data

##### Auxiliary switches

The auxiliary switches can be designed as force-guided contacts in 3RH contactor relays or also as mirror contacts in the case of 3RT power contactors.

For more information on force-guided operation and mirror contacts, see [Manuals](#) → "More information", page 2/55 onwards.

##### Solid-state time-delay auxiliary switches for mounting on 3RT2 contactors and 3RH2 contactor relays

The 3RA28 solid-state time-delay auxiliary switches which can be mounted on the contactor are designed for applications in the range from 24 to 240 V AC/DC (wide voltage range). Both the electrical and mechanical connection are made by simple snapping on and locking.

The time-delay auxiliary switch is supplied with power directly by two plug-in contacts through the coil terminals of the contactor, in parallel with A./A2.

A protection circuit (varistor) is integrated in each module.

A sealable cover is available to protect against careless adjustment of the set times.

##### Note:

Mounting more auxiliary switches on the contactor is not permitted.

##### Surge suppressors

- Without LED (also for spring-loaded terminals)  
Sizes S00 to S3
- With LED (also for spring-loaded terminals)  
Sizes S00 to S3

All 3RT2 contactors and 3RH2 contactor relays can be retrofitted with RC elements or varistors for damping opening surges in the coil. Diodes or diode assemblies (combination of interference suppression diode and Zener diode for short break times) can also be used.

The surge suppressors are plugged onto the front of size S00 contactors. Space is provided for them next to a snap-on auxiliary switch.

Varistors, RC elements or diode assemblies can be plugged onto the front of size S0 to S3 contactors. Exception: For size S3, the RC element is inserted on the front into the recesses to the left of the connection block.

Coupling contactors are supplied either without overvoltage damping or with a suppressor diode, varistor or diode connected as standard, according to the version.

##### Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are attenuated against voltage peaks. Different accessories are available for the contactors (time change with: interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, see [Equipment Manual](#).

##### Coupling links for control by PLC

- Operation with 24 V DC
- Operating range 17 to 30 V
- Low power consumption of 0.5 W
- An LED indicates the switching state.

The 3RH2924-1GP11 coupling link has an integrated surge suppressor (varistor) for the contactor coil being switched and is mounted on the size S0 contactor coil via a coil connection module.

## Power contactors for switching motors

Accessories for SIRIUS 3RT contactors and SIRIUS 3RH2 contactor relays > Auxiliary switches, instantaneous

### Overview

#### Auxiliary switch: Terminal designations and identification numbers for auxiliary contacts

##### Terminal designations

The terminal designations are 2-digit, e.g. 13, 14, 21, 22:

- Tens digit: Sequence digit
  - Related terminals have the same sequence digit
- Units digit: Function digit
  - 1-2 for normally closed contacts (NC)
  - 3-4 for normally open contacts (NO)

##### Identification numbers

The identification number indicates the number and type of the auxiliary contacts, e.g. 40, 31, 22, 13:

- 1st digit: number of normally open contacts (NO)
- 2nd digit: number of normally closed contacts (NC)

Examples:

- 31 = 3 NO + 1 NC
- 40 = 4 NO

#### Selection aid for mountable auxiliary switches for power contactors and contactor relays

The auxiliary switches of the 3RH29 series for mounting on the front and side can be used for 3RT2 power contactors as well as for 3RH2 contactor relays.

The possible combinations of basic unit and mounted auxiliary switch can be found in the tables, [see the following pages](#).

Where the columns and lines intersect (blue and green in the example) you will find the identification number for the combination of basic unit (column) and auxiliary switch (line).

### Solid-state compatible auxiliary switches, 2-pole

- For operation in dusty atmospheres
- For solid-state circuits with rated operational currents  $I_e/AC-14$  and DC-13 from 1 to 300 mA at 3 to 60 V
- Hard gold-plated contacts
- Laterally mountable auxiliary switches and auxiliary switches for snapping onto the front for 3RT2 contactors, sizes S0 to S3, are designed as mirror contacts according to IEC 60947-4-1, Annex F.

### Connection methods

The following connection options are available for 3RT contactors depending on the size and version:

- 3RT2 contactors
  - Sizes S00 and S0: screw terminals or spring-loaded terminals both for the main as well as for the auxiliary and control circuits
  - Sizes S2 and S3: screw terminals (complete devices) or spring-loaded terminals (auxiliary circuit only)
- 3RT13 contactors, sizes S6 to S12: Busbar connections (partly with bus connectors offset), auxiliary and control circuits with screw terminals
- 3RT14 contactors: Busbar connections

Screw terminals

Spring-loaded terminals

Busbar connections

The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.

### Further contactors

- For SIRIUS 3RT26 contactors for capacitive loads (AC-6b), 3-pole
- For 3TC contactors for switching DC voltage, 1- and 2-pole, see page 2/113
- Contactors for railway applications
  - For SIRIUS 3RT contactors with extended operating range, 3-pole, see page 2/101
  - For SIRIUS 3RH2 contactor relays with extended operating range, see page 2/109
  - For 3TH4 contactor relays, 8-pole, see page 2/135

## Switching devices – Contactors and contactor assemblies – Special applications

### Contactors for special applications

#### SIRIUS 3RT.4 contactors for weak or non-inductive loads (AC-1), 3-pole up to 2 650 A

#### Overview

3-pole AC-1 contactors  
top row: 3RT148 contactors  
bottom row: 3RT244, 3RT145 to 3RT147 contactors

#### **3RT.4 power contactors**

##### Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

##### Ambient conditions

If the devices are used in ambient conditions which deviate from common industrial conditions (IEC 60721-3-3 "Stationary Use, Weather-Protected"), information must be obtained about possible restrictions with regard to the reliability and endurance of the device and possible protective measures. In this case, contact our Technical Support:

[www.siemens.com/support-request](http://www.siemens.com/support-request)

##### Contactors in safety-related applications

Contactors are a significant part of safety-related applications. They are generally the actuators that perform the switching operation leading to the safe disconnection of the corresponding application or system.

Contactors with mirror contacts according to IEC 60947-4-1 are generally required for use in safety-related applications. Most of our contactors meet this requirement; a corresponding note can be found in the technical product data sheet.

##### Contactors with increased tamper protection

Increased tamper protection is ensured either by using our contactor versions with factory-installed, permanently mounted auxiliary switches which are protected against mechanical external actuation (e.g. 3RT14...-.....-3PA0), or by using the 3RT1926-4MA10 sealable cover as an accessory.

##### Surge suppression

Contactors supplied without a coil circuit can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of diode and Zener diode for short break times) for damping opening surges in the coil.

##### Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are damped against voltage peaks. Different accessories are available for the contactors (time change with: interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, see [Equipment Manual](#).

##### Accessories and spare parts

- 3RT244 and 3RT145 to 3RT147 contactors, see also [basic units, page 2/52 onwards](#)
- For 3RT148 contactors, see [Catalog IC 10](#)

## Switching devices – Contactors and contactor assemblies – Special applications

### Contactors for special applications

#### SIRIUS 3RT.4 contactors for weak or non-inductive loads (AC-1), 3-pole up to 2 650 A

##### 3RT244 contactors

###### Main circuit

###### Connection methods

Screw terminals with box terminal; direct connection to the connecting bar possible with cable lugs when the box terminal is removed.

###### Surge suppression

The varistors and diode assemblies are plugged into the front of the contactors. The RC element is plugged into the two recesses on the front of the contactor to the left of the terminal block for the auxiliary switches.

###### Short-circuit protection

For short-circuit protection without overload relays, see [page 2/82](#).

###### Control circuit

###### Operating mechanism types

These contactors are available as versions with conventional AC or DC operating mechanisms or as versions with a wide-range solid-state operating mechanism and a universal actuating voltage (AC or DC operation).

With an operating range from 0.8 to 1.1 x  $U_s$ , control takes place via the control supply voltage connection A1 - A2.

###### Solenoid coils/operating mechanisms

Coil replacement is possible.

###### Auxiliary circuit

###### Auxiliary contact complement

The contactors contain two integrated auxiliary contacts (1 NO + 1 NC).

For detailed information about the fitting of auxiliary switches, see [pages 2/55 to 2/58](#).

##### 3RT14 contactors

###### Main circuit

###### Connection methods

- 3RT145 to 3RT147 contactors:  
Screw terminals with connecting bars that the cables can be connected to using either cable lugs or flexible or rigid busbars. Alternatively, box terminals are available as accessories.
- 3RT148 contactors:  
Busbar connections

###### Short-circuit protection

Short-circuit protection of contactors without overload relays

- For 3RT145 to 3RT147 contactors, see [page 2/82](#)
- For 3RT148 contactors, see [Catalog IC 10](#)

###### Control circuit

###### Operating mechanism types

The operating mechanisms for contactors 3RT145 to 3RT147 are powered via a supply voltage with an operating range from 0.8 to 1.1 x  $U_s$ , optionally also controlled depending on the chosen mode of operation. Alternatively, control is via the separate 24 V DC control signal input. Various rated voltage ranges for AC/DC control are available.

The following control and/or operating mechanism versions are available:

- 3RT14..-A:  
Standard operating mechanism for AC and DC operation (power consumption reduced from closing to closed)
- Solid-state operating mechanisms  
Overvoltage damping of the operating mechanism coil is already integrated in the electronics for contactors with solid-state operating mechanisms.  
The following versions are available:
  - 3RT14..-N:  
With two operating modes: direct control or via PLC input (24 V DC)
  - 3RT14..-P:  
Control via PLC input (24 V DC) only, but with additional remaining lifetime indicator (RLT)
  - 3RT14..-S:  
Control via fail-safe PLC input (24 V DC) only, for simplification of safety applications

The 3RT148 contactors are equipped with a solid-state operating mechanism for AC/DC control; coil damping is integrated. The operating range is 0.85 to 1.1 x  $U_s$ .

###### Solenoid coils/operating mechanisms

- 3RT145 to 3RT147 contactors:  
The 3RT14..-A/-N/-P operating mechanisms are removable and can be replaced simply by unlocking and pulling them out.  
  
NOTICE: Removal or changing of the operating mechanism is not permitted for 3RT14..-S contactors with fail-safe control.
- 3RT148 contactors:  
The operating mechanisms are removable and can be replaced simply by unlocking and pulling them out.

###### Surge suppression

Exchangeable operating mechanisms with integrated coil circuit (varistor) are available.

###### Auxiliary circuit

###### Auxiliary contact complement

These contactors are supplied with two laterally mounted auxiliary switches. The fitting of auxiliary switches is possible on the front and on the side.

## Switching devices – Contactors and contactor assemblies – Special applications

### Contactors for special applications

#### SIRIUS 3RT.3 contactors, 4-pole, up to 525 A

##### Overview

3RT231 to 3RT234 and 3RT135 to 3RT137 contactors, with screw terminals

#### **3RT.3 contactors, 4-pole**

##### Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

##### Surge suppression

Contactors supplied without a coil circuit can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of diode and Zener diode for short break times) for damping opening surges in the coil.

##### Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are damped against voltage peaks. Different accessories are available for the contactors (time change with: Interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, see [Equipment Manual](#).

##### Accessories and spare parts

- 3RT231 to 3RT234 contactors, see [page 2/52 onwards](#)
- 3RT135 to 3RT137 contactors,

#### **3RT23 contactors**

##### **Main circuit**

##### Connection methods

- 3RT231 and 3RT232 contactors:  
Screw or spring-loaded terminals, spring-loaded terminals with convenient plug-in design for device connectors
- 3RT233 and 3RT234 contactors:  
Screw terminals with box terminal; direct connection to the connecting bar possible with cable lugs for 3RT234 when the box terminal is removed.

##### Short-circuit protection

For short-circuit protection of 3RT23 contactors without overload relays, see [page 2/90](#).

##### Surge suppression

- 3RT231 contactor:  
The surge suppressors are plugged onto the front of the contactors here. Space is provided for them next to a snap-on auxiliary switch.

- 3RT232 and 3RT233 contactors:  
The surge suppressors (varistors, RC elements or diode combinations) can be plugged into the front of the contactors.
- 3RT234 contactors:  
The varistors and diode assemblies are plugged into the front of the contactors. The RC element is plugged into the two recesses on the front of the contactor to the left of the terminal block for the auxiliary switches.

##### **Control circuit**

##### Connection methods

Screw or spring-loaded terminals

##### Operating mechanism types

The contactors are available as versions with conventional AC or DC operating mechanisms or as versions with a wide-range solid-state operating mechanism and a universal actuating voltage (AC or DC operation possible).

Control takes place via the control supply voltage connection A1 - A2 with varying operating ranges (see [relevant product data sheet](#) for further details).

##### **Auxiliary circuit**

##### Auxiliary contact complement

- 3RT231 contactor: An auxiliary contact is integrated in the basic unit.
- 3RT232 to 3RT234 contactors: The basic units contain two integrated auxiliary contacts (1 NO + 1 NC).

All basic units can be expanded with auxiliary switches.

For detailed information about the fitting of auxiliary switches, see [pages 2/55 to 2/58](#).

#### **3RT13 contactors**

##### **Main circuit**

##### Connection methods

- 3RT135 to 3RT137 contactors:  
Screw terminals with connecting bars that the cables can be connected to using either cable lugs or flexible or rigid busbars.
- 3RT136 and 3RT137 contactors:  
These can be fitted with bus connectors offset.

##### Short-circuit protection

For short-circuit protection of 3RT13 contactors, see [page 2/93](#).

##### **Control circuit**

##### Connection methods

Screw terminals

##### Operating mechanism types

The contactors are fitted with a wide-range solid-state operating mechanism that can be controlled with both 50/60 Hz AC and DC.

The operating range of the DC control is  $0.8 \times U_{s \text{ min}}$  and  $1.1 \times U_{s \text{ max}}$ , and for AC operation  $0.85 \times U_{s \text{ min}}$  and  $1.1 \times U_{s \text{ max}}$ .

It is not possible to change the operating mechanism.

##### **Auxiliary circuit**

##### Auxiliary contact complement

The contactors have two auxiliary contacts with 2 NO + 2 NC.

One additional auxiliary switch with 1 NO + 1 NC can be mounted on each side.

# Switching devices – Contactors and contactor assemblies – Special applications

## Contactors for special applications

SIRIUS 3RT.3 contactors, 4-pole, up to 525 A

### Application

The 3RT.3 contactors can be used for the following applications:

- 4-pole switching of weak or non-inductive loads (AC-1)
- Disconnecting loads or power generation plants from the grid
- For system transfers

We additionally offer special versions of the 3RT23 contactors for switching motor-driven loads (AC-3).

# Switching devices – Contactors and contactor assemblies – Special applications

## Contactors for special applications

### SIRIUS 3RT25 contactors, 4-pole, 2 NO + 2 NC

#### Overview

##### Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

The contactors are suitable for use in any climate. They are finger-safe according to IEC 60529.

##### Surge suppression

Contactors supplied without a coil circuit can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of diode and Zener diode for short break times) for damping opening surges in the coil.

##### Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are damped against voltage peaks. Different accessories are available for the contactors (time change with: Interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, see [Equipment Manual](#).

##### Auxiliary contacts

Size S0 to S3 contactors have two auxiliary contacts 1 NO + 1 NC integrated in the basic version.

With sizes S00 to S3, four additional auxiliary contacts can be fitted, including no more than two NC contacts.

For a general description of sizes S00 to S3 of 3RT2 contactors.

##### Accessories

The accessories for the 3-pole SIRIUS 3RT2 contactors can also be used for the 4-pole versions.

##### Use of 3RT contactors with IE3/IE4 motors

##### Note:

For the use of 3RT25 contactors in conjunction with highly energy-efficient IE3/IE4 motors, please observe the information on dimensioning and configuring, see [Application Manual](#).

#### Application

The contactors are suitable:

- For changing the polarity of hoisting gear motors
- For switching two separate loads

##### Note:

Single device for pole reversal; not suitable for reversing duty. 3RT25 contactors are not suitable for switching a load between two current sources.

# Switching devices – Contactors and contactor assemblies – Special applications

## Contactors for special applications

### Contactors for railway applications > SIRIUS 3RT contactors with extended operating range, 3-pole

#### Overview

##### Standards

IEC 60947-4-1, IEC 60077-2, EN 50155

##### Performance range

###### Sizes S00 to S3

- 3RT20 contactors for motor loads (AC-3) up to 110 A / 55 kW

###### Sizes S6 to S12

- 3RT10 contactors for motor loads (AC-3) from 55 kW to 500 A / 250 kW
- 3RT14 contactors for weak or non-inductive loads (AC-1) up to 690 A

#### Application

Besides standard approval in compliance with IEC 60947-4-1, the contactors with an extended operating range are also approved in compliance with the relevant parts of IEC 60077-2, thus fulfilling the requirement for use in railway applications.

Thus, their suitability for increased requirements such as an

- extended temperature range compared to the IEC 60947-4-1 product standard or
- extended operating range of the contactor operating mechanisms or also
- increased resistance to mechanical oscillations and vibrations is warranted. The design of the terminals in the spring-loaded connection system also contributes toward vibration resistance.

##### Versions

In addition to the complete motor contactor series (AC-3) up to 250 kW of sizes S00 to S12 (3RT.0), as from size S6, new variants of the 3RT14 contactors optimized for AC-1 operation up to 525 kW with extended operating conditions are also available.

##### Operating range of contactor operating mechanisms

The contactors with extended operating range and railway approval are available with a solid-state DC operating mechanism in all sizes from S00 to S12.

This operating mechanism version has an operating range from 0.7 to 1.25 x  $U_s$  in the temperature range -40 to 70 °C. Overvoltage damping of the contactor coil with a varistor circuit is already integrated.

As from size S6, the operating mechanisms are equipped with an additional control input that can be operated between 24 DC and 110 V. This function can optionally be switched on or off via a selector switch.

##### Auxiliary switches

These devices can be equipped with auxiliary switches in the same way as their corresponding versions of the standard motor contactors (see overview diagrams of the contactors, page 2/6 onwards).

##### Ambient temperature

The permissible ambient temperature for operation of the contactors (across the full operating range of the operating mechanisms) is -40 to +70 °C.

##### Side-by-side mounting

###### Contactors with conventional operating mechanism

- Sizes S00 and S0:  
Side-by-side mounting is permissible at ambient temperatures up to 60 °C. At > 60 to 70 °C, a clearance of at least 10 mm shall be provided.

###### Contactors with series resistor

- Size S00:  
Side-by-side mounting is permissible at ambient temperatures up to 70 °C.

###### Contactors with solid-state operating mechanism (version: 3RT.....-.....-0LA2)

- Sizes S00 to S3:  
Side-by-side mounting is permissible at ambient temperatures up to 70 °C.
- Sizes S6 to S12:  
Side-by-side mounting is permissible at ambient temperatures up to 60 °C. At > 60 to 70 °C, a clearance of at least 10 mm shall be provided.

# Switching devices – Contactors and contactor assemblies – Special applications

## Contactors for special applications

### Contactors for railway applications > SIRIUS 3RH2 contactor relays with extended operating range

#### Overview

##### Standards

IEC 60947-5-1

The contactor relays are finger-safe according to IEC 60529. The size S00 contactor relays have spring-loaded connections for all terminals.

##### Ambient temperature

The permissible ambient temperature for operation of the contactor relays (across the full coil operating range) is -40 to +70 °C.

Uninterrupted duty at temperatures > +60 °C reduces the mechanical service life, the current carrying capacity of the conducting paths and the switching frequency.

##### Control and auxiliary circuits

The solenoid coils of the contactor relays have an extended coil operating range from 0.7 to 1.25 x  $U_s$  and are fitted as standard with surge suppressors. The opening delay is consequently 2 to 5 ms longer than for standard contactors.

#### Application

For operation in installations that are subject both to considerable variations in the control voltage and to high ambient temperatures, e. g. railway applications under extreme climatic conditions, rolling mills, etc.

Also for control supply voltages with battery buffering to extend the operating time in the event of battery charge failure.

##### Contactor relays with conventional coil

###### Control and auxiliary circuits

These contactor relays have an extended operating range from 0.7 to 1.25 x  $U_s$ ; the solenoid coils are fitted with suppressor diodes as standard. An additional series resistor is not required.

###### Note:

An additional auxiliary switch cannot be mounted.

###### Side-by-side mounting

A clearance of 10 mm is required for side-by-side mounting at ambient temperatures > 60 °C ≤ 70 °C.

##### Contactor relays with series resistor

###### Control and auxiliary circuits

The DC solenoid systems of the contactor relays are modified (to holding coil) by means of a series resistor.

The size S00 contactor relays are supplied prewired with a plug-on module containing the series resistor. A surge suppressor (a suppressor diode or varistor as preferred) is integrated.

A 4-pole auxiliary switch (according to EN 50005) can be mounted additionally.

###### Side-by-side mounting

Side-by-side mounting is permissible at ambient temperatures up to 70 °C.

##### Contactor relays with solid-state operating mechanism

###### Control and auxiliary circuits

The solenoid coils of these contactor relays have an extended coil operating range from 0.7 to 1.25 x  $U_s$  and are fitted as standard with varistors to provide protection against overvoltage.

The contactor relays are energized via upstream control electronics which ensure the coil operating range of 0.7 to 1.25 x  $U_s$  at an ambient temperature of 70 °C. They are supplied as complete units with integrated coil electronics. A varistor is integrated for damping opening surges in the coil.

###### Side-by-side mounting

Side-by-side mounting is permissible at ambient temperatures up to 70 °C.

<sup>1)</sup> 3RH21...-K contactor relays without article number suffix "-0LA." are coupling contactor relays that are certified for the temperature range -25 to +60 °C. For railway applications, an additional certification approves these contactors with a minimum clearance of 10 mm for the extended temperature range from -40 to +70 °C.

All details and technical specifications not mentioned here are identical to those of the 3RH2 basic units, see page 2/125 onwards.

# Switching devices – Contactors and contactor assemblies – Special applications

## Contactors for special applications

### Contactors for railway applications > 3TC contactors for switching DC voltage, 2-pole

#### Overview

##### Standards

IEC 60947-4-1

The contactors are finger-safe according to IEC 60529 (exception: series resistor). Terminal covers may have to be fitted onto the connecting bars, depending on the configuration with other devices.

All details and technical specifications not mentioned here are identical to those of the standard 3TC contactors, see page 2/114.

##### Ambient temperature

The permissible ambient temperature for operation of the contactors (across the full coil operating range) is -50 to +70 °C. Uninterrupted duty at temperatures < -25 °C and > +55 °C reduces the mechanical service life, the current carrying capacity of the conducting paths and the switching frequency.

A clearance of 10 mm is required for side-by-side mounting of size 2 contactors at ambient temperatures > 55 °C. There is no need to reduce the technical specifications.

##### Series resistor

The DC solenoid systems of the 3TC contactors must be modified (to holding coil) by means of a series resistor. This series resistor is supplied separately packed with the contactors.

With types 3TC48, the series resistor must be attached onto the right-hand side of the auxiliary switch by means of the enclosed mounting parts and sets of links provided, while in the case of the 3TC44 it must be mounted and wired between the contactor poles. With types 3TC52 and 3TC56, the series resistor must be attached separately next to the contactors.

##### Auxiliary contacts

The contactors are equipped with two lateral auxiliary switches each with 1 NO + 1 NC contact. Further auxiliary switches cannot be mounted on the DC-operated contactors.

One NC contact is required for the series resistor function. Two NO contacts and one NC contact are thus unassigned.

##### Reversing contactors

With the 3TC52 and 3TC56 contactors, the series resistor must be connected using an additional K2 reversing contactor. This contactor is automatically included in the scope of supply.

##### Dimensions

Attaching resistors and varistors increases the width of the contactors.

#### Application

For operation in installations which are subject both to considerable variations in the control voltage and to high ambient temperatures, e.g. in railway applications.

##### Control and auxiliary circuits

The solenoid coils of the contactors have an extended coil operating range from 0.7 to 1.25 x  $U_s$  and are fitted as standard with varistors to provide protection against overvoltage. The opening delay is consequently 2 to 5 ms longer than for standard contactors.

## Switching devices – Contactors and contactor assemblies – Special applications

### Contactors for special applications

#### 3TC contactors for switching DC voltage, 1- and 2-pole

##### Overview

##### 3TC4 and 3TC5

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1 (auxiliary switches)

The contactors are finger-safe according to IEC 60529. Terminal covers may have to be fitted onto the connecting bars, depending on the configuration with other devices.

The DC motor ratings given in the tables are applicable to the DC-3 and DC-5 utilization categories with 2-pole switching of the load or with the two conducting paths of the contactor connected in series.

One contactor conducting path can switch full power up to 220 V. For voltages over 220 V, the two conducting paths are to be switched in series, [see rated data of the main contacts, page 2/116](#).

##### Surge suppression

Contactors supplied without a coil circuit can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of diode and Zener diode for short break times) for damping opening surges in the coil, [see page 2/122 onwards](#).

##### Note:

The break times of the contactor, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are damped against voltage peaks. Different accessories are available for the contactors (time change with: Interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, [see Equipment Manual](#).

##### Auxiliary contacts

The contactors are equipped with two lateral auxiliary switches each with 1 NO + 1 NC contact. On the 3TC48 to 3TC56 contactors with AC operation, a second auxiliary switch can be mounted on the right and left. On contactors with DC operation, expansion of the auxiliary contacts is not possible.

##### Application

The contactors are suitable for switching and controlling DC motors as well as all other DC circuits.

##### 3TC7

IEC 60947-4-1

The contactors are suitable for use in any climate. They are suitable for switching and controlling DC motors as well as all other DC circuits.

The solenoid excitation is configured for a particularly large operating range. It is between 0.7 or 0.8 and  $1.2 \times U_g$ .

3TC74 contactors can be used at up to 750 V/400 A and 50 Hz in AC-1 operation. For voltages over 750 V, the two conducting paths (3TC74: two contactors) are to be switched in series, [see rated data of the main contacts, page 2/118](#).

# Switching devices – Contactors and contactor assemblies – Contactor relays and relays

## Contactor relays

### SIRIUS 3RH2 contactor relays, 4- and 8-pole

#### Overview

#### Contactor relays, size S00, with accessories

## Switching devices – Contactors and contactor assemblies – Contactor relays and relays

### Contactor relays

#### SIRIUS 3RH2 contactor relays, 4- and 8-pole

##### Standards

IEC 60947-1, IEC 60947-4-1, IEC 60947-5-1

The 3RH2 contactor relays are available with screw or spring-loaded terminals. The basic unit contains four contacts with terminal designations according to EN 50011.

The 3RH2 contactor relays are suitable for use in any climate. They are finger-safe according to IEC 60529.

The 3RH21 coupling contactor relays for switching auxiliary circuits are tailored to the special requirements of working with electronic controls.

##### Contact reliability

High contact stability at low voltages and currents, suitable for solid-state circuits with currents  $\geq 1$  mA at a voltage of  $\geq 17$  V.

##### Surge suppression

RC elements, varistors, diodes or diode assemblies (combination of a diode and a Zener diode) can be plugged onto all 3RH2 contactor relays from the front for damping opening surges in the coil. The plug-in direction is determined by a coding device.

Coupling contactor relays have a low power consumption and an extended solenoid coil operating range.

Depending on the version, the solenoid coils of the coupling contactor relays are supplied either without overvoltage damping (versions 3RH21...-HB40 or 3RH21...-MB40-0KT0) or with a diode or suppressor diode connected as standard.

##### Note:

The auxiliary contactor's OFF times, the opening delay times of the NO contacts and the closing delay times of the NC contacts increase if the contactor coils are attenuated against voltage peaks. Various accessories are available for the auxiliary contactors (time change for: interference suppression diode 6x to 10x; diode assembly 2x to 6x; suppressor diode +1 to 5 ms; varistor +2 to 5 ms).

For details, see [Equipment Manual](#).

Special version					□ □ □ □
Example		<b>3RH2 1 2 2 - 1 A P 0 0</b>			

##### Note:

The Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

##### Accessories

The accessories for the 3RT2 contactors in size S00 can also be used for the 3RH2 contactor relays (see [page 2/52 onwards](#)).

##### Auxiliary switches

The 3RH21 contactor relays (with the exception of coupling contactor relays) can be expanded by up to four contacts by the addition of mounted auxiliary switches.

The auxiliary switch can easily be snapped onto the front of the contactor relays. The auxiliary switch has a centrally positioned release lever for disassembly.

The conventional front auxiliary contacts fulfill the characteristics of force-guided operation and are therefore suitable for safety applications.

##### Contactor relays in safety-related applications

Contactor relays are a significant part of safety-related applications. They are generally the actuators that perform the switching operation leading to the safe disconnection of the corresponding application or system.

Contactor relays with force-guided operation according to IEC 60947-5-1 are generally required for use in safety-related applications. Most of our contactors meet this requirement; a corresponding note can be found in the technical product data sheet.

##### Contactor relays with increased tamper protection

Increased tamper protection is ensured either by using our contactor relay versions with permanently mounted auxiliary switches installed in the factory (e.g. 3RH22 contactor relays), or by using the 3RT2916-4MA10 sealable cover as an accessory (see [page 2/72](#)).

For your orders, please use the article numbers quoted in the selection and ordering data.

Type  
Size

**Contactor relays**  
**3RH2**  
**S00**

##### Permissible mounting position

The contactor relays are designed for operation on a vertical mounting surface.

Upright mounting position

Special version required

(in the case of coupling contactor relays and contactor relays with extended operating range 3RH2122-2K.40 on request)

##### Force-guided operation of contacts in contactor relays

###### 3RH2:

**Yes**, in the basic unit and the auxiliary switch as well as between the basic unit and the mounted auxiliary switch (**removable**) acc. to:

- ZH1/457
- IEC 60947-5-1, Annex L

###### 3RH22:

**Yes**, in the basic unit and the auxiliary switch as well as between the basic unit and the mounted auxiliary switch (**permanently mounted**) acc. to:

- ZH1/457
- IEC 60947-5-1, Annex L

###### Note:

3RH2911-NF. solid-state compatible auxiliary switches have no force-guided contacts.

##### Explanations:

There is force-guided operation if it is ensured that the NC and NO contacts cannot be closed at the same time.

###### ZH1/457

Safety Rules for Controls on Power-Operated Metalworking Presses.

###### IEC 60947-5-1, Annex L

Standard for low-voltage switchgear and controlgear; Special requirements for mechanically linked contact elements

##### Contact reliability

Contact reliability at 17 V, 1 mA acc. to IEC 60947-5-4

Frequency of contact faults  $<10^{-8}$ , i.e.  $<1$  fault per 100 million operating cycles

##### Contact endurance for AC-15/AC-14 and DC-13 utilization categories

The contact endurance is mainly dependent on the breaking current. It is assumed that the operating mechanisms are switched randomly, i.e. not synchronized with the phase angle of the supply system.

If magnetic circuits other than the contactor operating mechanisms or solenoid valves are present, e.g. magnetic brakes, protective measures for the load circuits are necessary, e.g. in the form of RC elements and freewheel diodes.

The characteristic curves apply to

- 3RH21/3RH22 contactor relays<sup>1)</sup>
- 3RH24 latched contactor relays
- 3RH2911 auxiliary switches<sup>1)</sup>
- Auxiliary switches for snapping onto the front, max. 4-pole and for mounting onto the side in size S00

##### Diagram legend:

$I_a$  = Breaking current

$I_e$  = Rated operational current

<sup>1)</sup> 3RH22, 3RH2911:  $I_e = 6$  A for AC-15/AC-14 and DC-13.

# Switching devices – Contactors and contactor assemblies – Contactor relays and relays

## Contactor relays

### 3TH4 contactor relays, 8- and 10-pole

#### Overview

##### Standards

IEC 60947-5-1

The contactor relays are finger-safe according to IEC 60529. Terminal covers may have to be fitted onto the connecting bars, depending on the configuration with other devices.

##### Ambient temperature

The permissible ambient temperature for operation of the contactors (across the full coil operating range) is -50 to +70 °C. Uninterrupted duty at temperatures < -25 °C and > +55 °C reduces the mechanical service life, the current carrying capacity of the conducting paths and the switching frequency.

A clearance of 10 mm is required for side-by-side mounting at ambient temperatures > 55 °C. There is no need to reduce the technical specifications.

#### Application

For operation in installations which are subject both to considerable variations in the control voltage and to high ambient temperatures, e.g. in railway applications.

##### Control and auxiliary circuits

The solenoid coils of the contactor relays have an extended coil operating range from 0.7 to 1.25 x  $U_s$  and are fitted as standard with varistors to provide protection against overvoltage. The opening delay is consequently 2 to 5 ms longer than for standard contactors.

#### Technical specifications

##### More information

Technical specifications, see <https://support.industry.siemens.com/cs/ww/en/ps/16176/td>  
FAQs, see <https://support.industry.siemens.com/cs/ww/en/ps/16176/faq>

Manuals, see <https://support.industry.siemens.com/cs/ww/en/ps/16176/man>

Contactor relays

Type **3TH42**

##### General data

##### Permissible ambient temperature

- |                    |    |                           |
|--------------------|----|---------------------------|
| • During operation | °C | -50 ... +70 <sup>1)</sup> |
| • During storage   | °C | -55 ... +80               |

##### Control

##### Solenoid coil operating range

0.7 ... 1.25 x  $U_s$

**Power consumption of the solenoid coils** (for cold coil and 1.0 x  $U_s$ )  
For cold coil: Closing = Closed

W 5.2

##### Permissible residual current of the electronics

 (with 0 signal)

- DC operation ≤ 10 mA x (24 V/ $U_s$ )

##### Operating times within operating range

Total break time = Opening delay + Arcing time

- |                |               |    |            |
|----------------|---------------|----|------------|
| • DC operation | Closing delay | ms | 40 ... 200 |
|                | Opening delay | ms | 20 ... 30  |
| • Arcing time  |               | ms | 10 ... 20  |

<sup>1)</sup> Side-by-side mounting with 10 mm clearance.

All details and technical specifications not mentioned here are identical to those of the 3TH4 basic units, see page 2/127 onwards.

# Switching devices – Contactors and contactor assemblies – Contactor relays and relays

## Contact relays

### 3TH4 contactor relays, 8- and 10-pole

Contact relays

Type **3TH42, 3TH43**

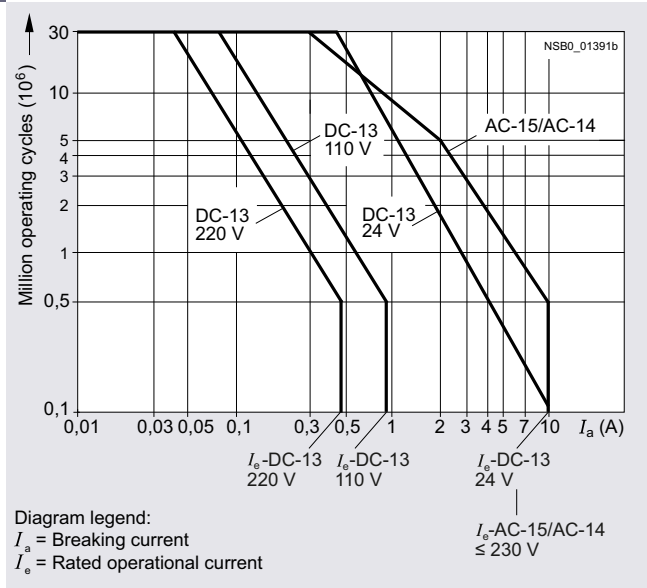

#### Contact endurance for AC-15/AC-14 and DC-13 utilization categories

The contact endurance is mainly dependent on the breaking current. It is assumed that the operating mechanisms are switched randomly, i.e. not synchronized with the phase angle of the supply system.

If magnetic circuits other than the contactor operating mechanisms or solenoid valves are present, e.g. magnetic brakes, protective measures for the load circuits are necessary.

RC elements or freewheel diodes are suitable as protective measures for the circuits.

### Connection methods

The contactor relays and the relays are available with screw terminals (box terminals) or with spring-loaded terminals.

The 3RQ coupling relays are supplied with screw terminals or spring-loaded (push-in) terminals. The plug-in bases for LZS/LZX coupling relays are also available with plug-in (push-in) terminals.

	Screw terminals
	Spring-loaded terminals, spring-loaded terminals (push-in)
	Flat connectors
	Plug-in terminals (push-in)
The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.	

### 3RQ coupling relays: Spring-loaded terminals (push-in) with TOP-wiring

Push-in terminals are a form of spring-loaded terminals allowing fast wiring without tools for rigid conductors or conductors equipped with end sleeves.

As with other spring-loaded terminals, a screwdriver (with 3.0 x 0.5 mm blade) is required to disconnect the conductor. The same tool can also be used to wire finely-stranded or stranded conductors with no end finishing.

The advantages of the push-in terminals are found, as with all spring-loaded terminals, in speed of assembly and disassembly and vibration-proof connection. There is no need for the checking and tightening required with screw terminals.

With the TOP wiring method, the wire inlet and terminals can be reached from the front. This helps to speed up the wiring process and eliminate wiring errors.

Video: SIRIUS 3RQ1 coupling relays

The force-guided SIRIUS 3RQ1 coupling relays in a modern titanium gray industrial enclosure are available in widths of 17.5 mm and 22.5 mm, and each with a supply voltage of 24 V DC (120 mm mounting depth) and 24 to 240 V AC/DC (90 mm mounting depth).

They are used for safe coupling up to SIL 3 / PL e of control signals to and from a control system or as an output expansion for the SIRIUS 3SK safety relays.

Further fields of application are based on the force-guided operation of relays according to IEC 60947-5-1 and EN 61810-3 for reading back relay states, for reliable diagnostics or signaling, or for the use of antivalent signals. Typical fields of application here are railways, signaling technology, and elevators.

The series consists of devices with up to five outputs and can be supplied with screw or spring-loaded (push-in) terminals.

International standards and certifications including CE, UL/CSA, EAC and railway approvals ensure international usability and exportability.

An extensive range of accessories is also available, such as device connectors for easy and safe connection of the 3RQ1 devices, replacement terminals, push-in lugs for wall mounting, and coding pins, see page 2/149 onwards.

### Note:

The Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

### Benefits

- Wide-range voltage versions from 24 to 240 V AC/DC available with a mounting depth of 90 mm for all variants
- Permanent wiring thanks to removable terminals in screw or spring-loaded technology (push-in)
- Replacement of individual terminals minimizes wiring effort
- Can be used as output extension for SIRIUS 3SK safety relays via device connectors
- All versions with real load contacts, also in the NC circuit
- Safety certification according to functional safety SIL 3 / PL e
- International standards and certifications including CE, UL/CSA, EAC, railway approvals, and more

## Switching devices – Contactors and contactor assemblies – Contactor relays and relays

### Coupling relays

#### SIRIUS 3RQ1 force-guided coupling relays, fail-safe up to SIL 3 / PL e

#### Application

- Safe coupling up to SIL 3 / PL e of control signals from and to a control system
- Output expansion for 3SK safety relays
- Use of force-guided contacts for reading back relay states
- For reliable diagnostics or signaling or for antivalent switching of loads
- Safe coupling:
  - Electrical separation between the input and output circuit
  - Adjustment of different signal levels
  - Signal amplification
  - Contact multiplication

#### 3RQ1 output expansion (up to SIL 3 / PL e) for the 3SK system

The force-guided 3RQ1 coupling relays with a mounting depth of 120 mm can be used as an output expansion up to SIL 3 / PL e and can be connected by wiring to all 3SK basic units and by using the 3ZY12 device connector to all 3SK1 and 3SK2 Advanced basic units.

They have a switching capacity of AC-15 5/3 A (like 3SK1211) at a switching voltage of 230 V and are available in widths of 17.5 mm and 22.5 mm. Furthermore, they have NC contacts with a switching capacity of AC-15 2/1.5 A for direct switching of loads (anti-parallel switching, signaling, etc.).

System configuration example with SIRIUS 3SK safety relays

Typical application with a fail-safe control system

<sup>1)</sup> NC contact designed to act as feedback contact.

#### Note:

All force-guided 3RQ1 coupling relays have safety certification up to SIL 2 / PL c or SIL 3 / PL e according to IEC 62061 / ISO 13849.

To achieve SIL 3 / PL e, two 3RQ10 devices can also be wired in series, see [Equipment Manual](#).

In addition, the 3SK1211 devices (output expansions for 3SK) provide force-guided coupling relays with 4 NO contacts and 1 NC contact up to SIL 3 / PL e with 24 V AC, 24 V DC and 110 to 240 V AC/DC.

For applications with high currents up to a switching capacity of 10 A AC-15, the 3SK1213 output expansions are also available with 24 V AC, 24 V DC and 110 to 240 V AC/DC.

These devices can be used in the same way as the 3RQ1 coupling relays for coupling to and from safe control systems, they feature 4 NO contacts and 1 NC contact, and are available as variants with 24 V AC, 24 V DC and 110 to 240 V AC/DC.

## Coupling relays

### SIRIUS 3RQ2 coupling relays with industrial enclosure

#### Overview

SIRIUS 3RQ2 coupling relay, screw terminals, 3 changeover contacts

#### More information

Homepage, see [www.siemens.com/relays](http://www.siemens.com/relays)

Industry Mall, see [www.siemens.com/product?3RQ2](http://www.siemens.com/product?3RQ2)

TIA Selection Tool Cloud (TST Cloud), see [www.siemens.com/tstcloud/?node=SignalConverters](http://www.siemens.com/tstcloud/?node=SignalConverters)

Conversion tool, see [www.siemens.com/conversion-tool](http://www.siemens.com/conversion-tool)

3RQ2 coupling relays in their 22.5 mm industrial enclosure serve to couple control signals to and from a controller and replace the 3RS18 coupling relays. The 3RQ2 has an impressively high-quality industrial enclosure finished in modern titanium gray so that it fits in visually with the SIRIUS series of relays.

The series consists of devices with up to three changeover contacts with screw or spring-loaded terminals (push-in) and, with its wide voltage range from 24 to 240 V AC/DC, is a genuine highlight in the coupling relay market.

Thanks to terminal assignment that is identical to the previous version, existing products can easily be converted.

The reduced variety of components simplifies product selection and standardization.

Numerous accessories are available for the 3RQ2 coupling relays, for example replacement terminals, push-in lugs for wall mounting and coding pins.

For your orders, please use the article numbers quoted in the selection and ordering data.

#### Benefits

- Permanent wiring thanks to removable terminals in screw or spring-loaded technology (push-in)
- Replacement of individual terminals minimizes wiring effort
- A product for all voltages from 24 to 240 V AC/DC
- Reduced costs thanks to fewer versions
- Especially high contact reliability even at low currents thanks to versions with hard gold-plated contacts
- International standards and certifications including CE, UL/CSA, EAC, railway approvals, and more

#### Application

- Electrical separation between the input and output circuit
- Adjustment of different signal levels
- Signal amplification
- Contact multiplication

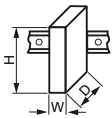

Application example motor controller

### Coupling relays

#### SIRIUS 3RQ3 coupling relays, narrow design

##### Overview

SIRIUS 3RQ3 coupling relays

##### More information

Homepage, see [www.siemens.com/relays](http://www.siemens.com/relays)

Industry Mall, see [www.siemens.com/product?3RQ3](http://www.siemens.com/product?3RQ3)

TIA Selection Tool Cloud (TST Cloud), see [www.siemens.com/tstcloud/?node=SignalConverters](http://www.siemens.com/tstcloud/?node=SignalConverters)

Conversion tool, see [www.siemens.com/conversion-tool](http://www.siemens.com/conversion-tool)

SIRIUS 3RQ3 coupling relays in narrow design are used for coupling control signals from and to a controller, and they are available in different versions:

- Coupling relays with relay output (not plug-in)
- Coupling relays with plug-in relays
- Coupling relays with semiconductor output (not plug-in)

##### ***Coupling relays with relay output (not plug-in)***

###### **AC and DC operation**

IEC 60947-5-1

The input and output coupling relays differ with regard to the positioning of the terminals and the LEDs.

##### ***Coupling relays with plug-in relays***

###### **AC and DC operation**

IEC 60947-1

The coupling relays are plug-in, so the relay can be replaced quickly at the end of its service life without detaching the wiring.

##### ***Coupling relays with semiconductor output (not plug-in)***

###### **AC and DC operation**

IEC 60947-1, EN 60664-1 and EN 50005;  
coupling relays with semiconductor output: EN 60747-5;  
programmable controllers: IEC 61131-2

The input and output coupling relays differ with regard to the positioning of the terminals and the LEDs.

The coupling relays with semiconductor output have extremely high contact reliability, so they are especially suitable for solid-state systems.

For test purposes, versions are available with manual-off-automatic switches.

This Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

## Switching devices – Contactors and contactor assemblies – Contactor relays and relays

### Coupling relays

#### SIRIUS 3RQ3 coupling relays, narrow design

##### Benefits

###### General

- All versions with screw terminals or spring-loaded terminals (push-in technology)
- TOP wiring with spring-loaded terminals (push-in) for quick and reliable wiring
- Low space requirements in the control cabinet thanks to a consistent width of 6.2 mm
- Reduced stockkeeping due to fewer variants
- Clearly visible functional state of the coupling relay by green LED
- Integrated reverse polarity protection and EMC suppressor diode
- Standardized accessories across the entire 3RQ3 series
- Universal bridging option using connecting combs for all terminals
- Galvanic isolation plate for isolating different voltages for neighboring units
- Clip-on labels available as set for individual labeling

###### Coupling relays with relay output (not plug-in)

- Relays fixed in enclosure for increased contact reliability
- Device variants with hard gold-plated contacts, hence high contact reliability at low currents

###### Coupling relays with plug-in relays

- Fast replacement of the relays with existing wiring
- Shorter installation times thanks to certified complete units
- Individual relays available as spare parts
- Device variants with hard gold-plated contacts, hence high contact reliability at low currents

###### Coupling relays with semiconductor output (not plug-in)

- Long service life since there is no mechanical wear
- High switching frequency thanks to short make-break times
- Vibration-resistant
- No contact bounce
- Extremely high contact reliability
- Noise-free switching
- Low control power required
- Switching of DC and capacitive loads

###### Note:

With semiconductors, the switching current is not dependent on the inductance of the load, i.e. the switching current for an inductive DC-13 load is the same as that for a DC-12 load. This means that coupling links with a semiconductor output are particularly suitable for inductive loads such as solenoid valves. It is not relevant to specify the number of operating cycles, because this does not affect the endurance of the semiconductor, provided it is not overheated.

##### Application

- Electrical separation between the input and output circuit
- Adjustment of different signal levels
- Signal amplification

Application example motor controller

✓ Has this function or can use this accessory

-- Does not have this function or cannot use this accessory

1) For symmetrical loading of the three phases.

2) For 1-phase, 2-phase and 3-phase asymmetrical loading of the three phases.

3) With molded-plastic enclosure 500 V AC.

4) For overload protection of the motors, appropriate overload relays must be used.

5) According to UL 489 at 480 Y/277 V AC: 65 kA or 50 kA.

6) Only lateral auxiliary switches can be used.

7) see Catalog IC 10.

The following illustration shows 3RV2 motor starter protectors/circuit breakers with the accessories which can be mounted for the sizes S00 to S3, see also "Introduction" → "Overview", page 2/162.

For accessories, see page 2/195 onwards.

Mountable accessories for SIRIUS 3RV2 motor starter protectors/circuit breakers

Motor starter protector with spring-loaded terminals, size S0 (left) and motor starter protector with screw terminals, size S00 (right)

The SIRIUS 3RV2 motor starter protectors/circuit breakers are compact, current limiting motor starter protectors/circuit breakers which are optimized for load feeders. The motor starter protectors/circuit breakers are used for switching and protecting three-phase motors of up to 55/45 kW at 400 V AC and for other loads with rated currents of up to 100 A.

3RV2 motor starter protectors are usually approved according to IEC and UL/CSA. According to UL 508/UL 60947-4-1, the 3RV2 motor starter protectors/circuit breakers in sizes S00 to S3 are approved as:

- "Manual Motor Controllers"
- "Manual Motor Controllers" for "Group Installations"
- "Manual Motor Controllers Suitable for Tab Conductor Protection in Group Installations"
- "Self-Protected Combination Motor Controllers (Type E)"  
Please note that for this approval the 3RV20 motor starter protectors must be equipped with additional infeed terminals or phase barriers.

Corresponding short-circuit values, see page 2/166.

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

#### General data

The 3RV2...-.....-0BA0 motor starter protectors/circuit breakers can be used at low ambient temperatures down to -50 °C.

3RV20..-.....-0DA0 motor starter protectors for system protection according to IEC, 3RV24..-.....-0DA0 for transformer protection according to IEC and 3RV27 and 3RV28 circuit breakers according to UL 489 can be used for 1-phase, 2-phase and 3-phase loads, as these motor starter protectors/circuit breakers do not have asymmetry detection.

The 3RV27 and 3RV28 are approved as circuit breakers according to UL 489; they are a special version of the 3RV2 motor starter protectors.

Thanks to their dimensions, the 3RV1011 motor starter protectors are suitable for installation in enclosures or under cramped installation conditions.

#### Type of construction

The 3RV2 motor starter protectors are available in four sizes:

- Size S00 – width 45 mm, max. rated current 16 A, at 400 V AC suitable for three-phase motors up to 7.5 kW
- Size S0 – width 45 mm, max. rated current 40 A, at 400 V AC suitable for three-phase motors up to 18.5 kW
- Size S2 – width 55 mm, max. rated current 80 A, at 400 V AC suitable for three-phase motors up to 37 kW
- Size S3 – width 70 mm, max. rated current 100 A, at 400 V AC suitable for three-phase motors up to 45/55 kW

#### Circuit breakers acc. to UL 489

The 3RV27 and 3RV28 circuit breakers are available in two or three sizes:

- Size S00 – width 45 mm, max. rated current 15 A, for 480 Y/277 V AC
- Size S0 – width 45 mm, max. rated current 22 A, for 480 Y/277 V AC
- Size S3 – width 70 mm, max. rated current 70 A, for 480 Y/277 V AC

#### Connection methods

The 3RV2 motor starter protectors/circuit breakers can be supplied with screw terminals and spring-loaded terminals.

Screw terminals

Spring-loaded terminals

The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.

#### Voltage data

The data for 3-phase power systems according to IEC 60947-4-1 are valid for the following line system configurations:

Voltage data $U_e$ in the catalog	Line system configurations	
	Three-phase Four-wire systems	Three-phase Three-wire systems
V	V	V
230	--	230
400	230/400	400
440	260/440	440
500	--	500
690	400/690	690 (only from size S3)
1 000	--	1 000

-- Not specified

#### Use in hazardous areas

The 3RV20 motor starter protectors for motor protection (without 3RV20..-.....-0BA0 and -0DA0) have certification in accordance with both the European explosion protection directive (ATEX) and the international explosion protection standard (IECEx).

In accordance with the European directive (ATEX), the 3RV20 (without 3RV20..-.....-0BA0 and -0DA0) are able to switch and protect explosion-proof motors of type of protection "Increased Safety EEx e".

In accordance with the international guideline (IECEx), the 3RV20 (without 3RV20..-.....-0BA0 and -0DA0) are able to switch and protect motors of the types "Increased Safety Ex e" or "Flameproof enclosure Ex d".

#### Note:

The Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

## Application

### Operating conditions

3RV2 motor starter protectors/circuit breakers are suitable for use in any climate. They are intended for use in enclosed rooms in which no severe operating conditions (such as dust, caustic vapors, hazardous gases) prevail. When installed in dusty and damp areas, suitable enclosures must be provided.

3RV2 motor starter protectors/circuit breakers can optionally be fed from the top or from below.

The permissible ambient temperatures, the maximum switching capacities, the tripping currents and other boundary conditions can be found in the technical specifications and tripping characteristics.

3RV2 motor starter protectors/circuit breakers are suitable for operation in IT systems (IT networks). In this case, the different short-circuit breaking capacity in the IT system must be taken into account, [see page 2/168](#).

Since operational currents, starting currents and current peaks are different even for motors with identical power ratings due to the inrush current, the motor ratings in the selection tables are only guide values. The specific rated and startup data of the motor to be protected are always paramount to the choice of the most suitable motor starter protector/circuit breaker. This also applies to motor starter protectors for transformer protection.

### Possible uses

The 3RV motor starter protectors/circuit breakers can be used:

- For short-circuit protection
- For motor protection (also with overload relay function)
- For system protection
- For short-circuit protection for starter combinations
- For transformer protection
- As main and EMERGENCY OFF switches
- For operation in IT systems (IT networks)
- In hazardous areas (ATEX, IECEx)
- As circuit breakers according to UL 489 (3RV27 and 3RV28)
- For fuse monitoring
- For distance protection

### **Use of SIRIUS protection devices in conjunction with IE3/IE4 motors**

#### Note:

For the use of 3RV2 motor starter protectors/circuit breakers in conjunction with highly energy-efficient IE3/IE4 motors, please observe the information on dimensioning and configuring, [see Application Manual](#).

#### Short-circuit breaking capacity $I_{cu}$ , $I_{cs}$ according to IEC 60947-2

The table shows the rated ultimate short-circuit breaking capacity  $I_{cu}$  and the rated service short-circuit breaking capacity  $I_{cs}$  of the 3RV motor starter protectors/circuit breakers with different operating voltages dependent on the rated current  $I_n$  of the motor starter protectors/circuit breakers.

Power can be supplied to the motor starter protectors/circuit breakers via the terminals at the top or at the bottom without restricting the rated data. If the short-circuit current at the installation location exceeds the motor starter protector/circuit breaker's specified rated short-circuit breaking capacity, you will need to use a back-up fuse. It is also possible to install an

upstream motor starter protector/circuit breaker with a limiter function.

The maximum rated current of this back-up fuse is indicated in the tables. The rated ultimate short-circuit breaking capacity then applies as specified on the fuse.

#### Fuseless design

Motor starter protector/contactors assemblies for short-circuit currents up to 150 kA can be ordered as 3RA2 fuseless load feeders.

Motor starter protectors/circuit breakers	Rated current $I_n$	Up to 240 V AC <sup>1)</sup>			Up to 400 V AC <sup>1)/415 V AC<sup>2)</sup></sup>			Up to 440 V AC <sup>1)/460 V AC<sup>2)</sup></sup>			Up to 500 V AC <sup>1)/525 V AC<sup>2)</sup></sup>			Up to 690 V AC <sup>1)</sup>

-- No back-up fuse required, since short-circuit-proof up to 100 kA

1) 10% overvoltage.

2) 5% overvoltage.

3) Back-up fuse only required if short-circuit current at the installation location is  $> I_{cu}$ .

4) Alternatively, fuseless limiter combinations for 690 V AC can also be used.

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

#### General data

#### Short-circuit breaking capacity $I_{cuIT}$ in the IT system (IT network) according to IEC 60947-2

3RV motor starter protectors/circuit breakers are suitable for use in IT systems. The values of  $I_{cu}$  and  $I_{cs}$  apply for the 3-pole short circuit. In the case of a double ground fault in different phases at the input and output side of a motor starter protector/circuit breaker, the special short-circuit breaking capacity  $I_{cuIT}$  applies. The specifications in the table below apply to 3RV motor starter protectors/circuit breakers.

If the short-circuit current at the installation location exceeds the motor starter protector/circuit breaker's specified rated short-circuit breaking capacity, you will need to use a back-up fuse. The maximum rated current of this back-up fuse is indicated in the tables. The rated short-circuit breaking capacity then applies as specified on the fuse.

Motor starter protectors/ circuit breakers	Rated current $I_n$	Up to 240 V AC <sup>1)</sup>		Up to 400 V AC <sup>1)/415 V AC<sup>2)</sup></sup>		Up to 440 V AC <sup>1)/460 V AC<sup>2)</sup></sup>		Up to 500 V AC <sup>1)/525 V AC<sup>2)</sup></sup>		Up to 690 V AC <sup>1)3)</sup>

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

#### General data

##### Limiting function with standard devices for 500 V AC and 690 V AC according to IEC 60947-2

The table shows the rated ultimate short-circuit breaking capacity  $I_{cu}$  and the rated service short-circuit breaking capacity  $I_{cs}$  with an upstream standard motor starter protector/circuit breaker that fulfills the limiter function at voltages 500 V AC and 690 V AC.

The short-circuit breaking capacity can be increased significantly with an upstream standard motor starter protector/circuit breaker with limiter function. The motor starter protector/circuit breaker which is connected downstream must be set to the rated current of the load.

With motor starter protector/circuit breaker assemblies, note the clearance to grounded parts and between the motor starter protectors/circuit breakers. Short-circuit-proof wiring between the motor starter protectors/circuit breakers must be ensured. The motor starter protectors/circuit breakers can be mounted side by side in a modular arrangement.

-- No limiter required

1) 10% overvoltage.

2) 5% overvoltage.

3) Use phase barriers 3RV29.8-1K on the infeed side.

4) Infeed to the limiter is always on the side 1L1/3L2/5L3.

5) Infeed to the limiter only on the side 2T1/4T2/6T3. At the infeed side phase barriers 3RV2948-1K have to be used.

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

#### General data

#### Permissible rated data of devices approved for North America (UL/CSA)

Motor starter protectors of the 3RV2 series are approved for UL/CSA, and according to UL 508/UL 60947-4-1 and CSA C22.2 No. 14/CSA C22.2 No. 60947-4-1 they can be used on their own or as load feeders in combination with a contactor.

These motor starter protectors/circuit breakers can be used as "Manual Motor Controllers" for "Group Installations", as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations" and as "Self-Protected Combination Motor Controllers (Type E)".

#### 3RV motor starter protectors as "Manual Motor Controllers"

If used as a "Manual Motor Controller", the motor starter protector is always operated in combination with an upstream short-circuit protection. Approved fuses or motor starter protectors/circuit breakers according to UL 489/CSA C22.2 No. 5 may be used for this purpose. These devices must be dimensioned according to the National Electrical Code (UL) or Canadian Electrical Code (CSA).

The file numbers for the approval of the 3RV as a manual motor controller are as follows:

- UL File No. 47705, CCN: NLRV
- CSA Master Contract 165071, Product Class: 3211

-- No approval

1) hp rating = Power rating in horse power (maximum motor rating).

2) FLA = Full Load Amps/motor full load current.

3) Corresponds to "short-circuit breaking capacity" according to UL/CSA.

4) Values in brackets only apply to 3RV2.23 motor starter protectors.

5) With Class J fuse.

6) With Class J fuse 300 A.

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

##### General data

3RV20 motor starter protectors (up to 100 A) as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations"

The application as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations" is only available for UL. CSA does not recognize this approval! When the motor starter protector is used as a "Manual Motor Controller Suitable for Tap Conductor Protection in Group Installations", it must always be combined with upstream short-circuit protection. Approved fuses or motor starter protectors/circuit breakers according to UL 489 may be used for this purpose. These devices must be dimensioned according to the National Electrical Code.

The 3RV20 motor starter protectors are approved as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations" under the following file number:

- UL File No. 47705, CCN: NLRV

#### General data

##### Front transverse auxiliary switches

		Switching capacity for different voltages	
		1 CO	1 NO + 1 NC, 2 NO
<b>Rated operational current <math>I_e</math></b>			
• At AC-15, alternating voltage			
- 24 V	A	4	2
- 230 V	A	3	0.5
• At AC-12 = $I_{th}$ , alternating voltage			
- 24 V	A	10	2.5
- 230 V	A	10	2.5
• At DC-13, direct voltage $L/R$ 200 ms			
- 24 V	A	1	1
- 48 V	A	--	0.3
- 60 V	A	--	0.15
- 110 V	A	0.22	--
- 220 V	A	0.1	--
<b>Minimum load capacity</b>		V	17
	mA		1

##### Front transverse solid-state compatible auxiliary switches

		Switching capacity for different voltages	
		1 CO	
<b>Rated operational voltage <math>U_e</math></b>	Alternating voltage	V	125
<b>Rated operational current <math>I_e</math> /AC-14</b>	At $U_e = 125$ V	A	0.1
<b>Rated operational voltage <math>U_e</math></b>	Direct voltage $L/R$ 200 ms	V	60
<b>Rated operational current <math>I_e</math> /DC-13</b>	At $U_e = 60$ V	A	0.3
<b>Minimum load capacity</b>		V	5
	mA		1

##### Lateral auxiliary switches with signaling switch

		Switching capacity for different voltages: Lateral auxiliary switch with 1 NO + 1 NC, 2 NO, 2 NC, 2 NO + 2 NC, Signaling switch	
<b>Rated operational current <math>I_e</math></b>			
• At AC-15, alternating voltage			
- 24 V	A	6	
- 230 V	A	4	
- 400 V	A	3	
- 690 V	A	1	
• At AC-12 = $I_{th}$ , alternating voltage			
- 24 V	A	10	
- 230 V	A	10	
- 400 V	A	10	
- 690 V	A	10	
• At DC-13, direct voltage $L/R$ 200 ms			
- 24 V	A	2	
- 110 V	A	0.5	
- 220 V	A	0.25	
- 440 V	A	0.1	
<b>Minimum load capacity</b>		V	17
	mA		1

##### Auxiliary releases

		Undervoltage releases	Shunt releases
<b>Power consumption</b>			
• During pick-up			
- AC voltages	VA/W	20.2/13	
- DC voltages	W	20	13 ... 80
• During uninterrupted duty			
- AC voltages	VA/W	7.2/2.4	--
- DC voltages	W	2.1	--
<b>Response voltage</b>			
• Tripping	V	0.35 ... 0.7 × $U_s$	0.7 ... 1.1 × $U_s$
• Pick-up	V	0.85 ... 1.1 × $U_s$	--
<b>Opening time maximum</b>	ms	20	

##### Short-circuit protection for auxiliary and control circuits

<b>Melting fuses</b> operational class gG	A	10
<b>Miniature circuit breakers</b> C characteristic	A	6 (prospective short-circuit current < 0.4 kA)

<sup>1)</sup> Guide value for 4-pole standard motors at 50 Hz 400 V AC. The actual starting and rated data of the motor to be protected must be considered when selecting the units.

<sup>2)</sup> Suitable for use with IE3/IE4 motors up to a starting current of 256 A. For higher starting currents we recommend using 3RV2 motor starter protectors size S2.

<sup>3)</sup> The devices must not be mounted side-by-side and they must not be assembled with link modules with contactors. A lateral clearance of 9 mm is required. For use with IE3/IE4 motors we recommend using 3RV2 motor starter protectors size S2.

<sup>4)</sup> The 3RV2021-.....-0BA0 motor starter protectors have a mechanical service life of 500 operating cycles.

<sup>5)</sup> The motor starter protectors do not have UL/CSA approval and are not certified either according to the European explosion protection directive ATEX or according to the international explosion protection standard (IECEx).

Auxiliary switches and other accessories can be ordered separately (see page 2/196 onwards).

<sup>2)</sup> The 3RV20.1-...-0BA0 motor starter protectors in sizes S00 and S0 have a mechanical service life of 500 operating cycles.

<sup>3)</sup> The motor starter protectors do not have UL/CSA approval and are not certified either according to the European explosion protection directive ATEX or according to the international explosion protection standard (IECEX).

<sup>4)</sup> Suitable for use with IE3/IE4 motors up to a starting current of 256 A. For higher starting currents we recommend using 3RV2 motor starter protectors size S2.

<sup>5)</sup> The devices must not be mounted side-by-side and they must not be assembled with link modules with contactors. A lateral clearance of 9 mm is required. For use with IE3/IE4 motors we recommend using 3RV2 motor starter protectors size S2.

Auxiliary switches and other accessories can be ordered separately (see page 2/196 onwards).

## Motor starter protectors/circuit breakers

### SIRIUS 3RV2 motor starter protectors/circuit breakers

Accessories &gt; Mountable accessories

#### Overview

##### Mounting location and function

The 3RV2 motor starter protectors/circuit breakers have three main contact elements. In order to achieve maximum flexibility, auxiliary switches, signaling switches, auxiliary releases and isolator modules can be supplied separately.

These components are easily fitted to the switches without the use of any tools according to requirements.

Overview graphic, [see page 2/163](#).

<p><b>Front side</b></p> <p><u>Notes:</u></p> <ul style="list-style-type: none"> <li>A maximum of four auxiliary contacts with auxiliary switches can be mounted on each motor starter protector/circuit breaker.</li> <li>Transverse auxiliary switches cannot be used for circuit breaker 3RV2742 (size S3).</li> </ul>	<p><b>Transverse auxiliary switches, solid-state compatible transverse auxiliary switches</b></p> <p>1 NO + 1 NC or 2 NO or 1 CO</p>	<p>An auxiliary switch can be inserted transversely on the front. The overall width of the motor starter protectors/circuit breakers remains unchanged.</p>
<p><b>Left-hand side</b></p> <p><u>Notes:</u></p> <ul style="list-style-type: none"> <li>A maximum of four auxiliary contacts with auxiliary switches can be mounted on each motor starter protector/circuit breaker.</li> <li>Lateral auxiliary switches (two contacts) and signaling switches can be mounted separately or together.</li> <li>Signaling switches cannot be used for 3RV1011, 3RV27 and 3RV28 motor starter protectors/circuit breakers.</li> <li>Only lateral auxiliary switches can be used for 3RV2742 (size S3).</li> </ul>	<p><b>Lateral auxiliary switches (2 contacts)</b></p> <p>1 NO + 1 NC or 2 NO or 2 NC</p> <p><b>Lateral auxiliary switches (4 contacts)</b></p> <p>2 NO + 2 NC</p> <p><b>Signaling switches</b></p> <p>Tripping 1 NO + 1 NC Short circuit 1 NO + 1 NC</p>	<p>One of the three lateral auxiliary switches can be mounted on the left side per motor starter protector/circuit breaker. The contacts of the auxiliary switch close and open together with the main contacts of the motor starter protector/circuit breaker.</p> <p>The width of the lateral auxiliary switch with two contacts is 9 mm.</p> <p>One lateral auxiliary switch with four contacts can be mounted on the left side per motor starter protector/circuit breaker. The contacts of the auxiliary switch close and open together with the main contacts of the motor starter protector/circuit breaker.</p> <p>The width of the lateral auxiliary switch with four contacts is 18 mm.</p> <p>One signaling switch can be mounted on the left side of each motor starter protector.</p> <p>The signaling switch has two contact systems.</p> <p>One contact system always signals <b>tripping</b> irrespective of whether this was caused by a short circuit, an overload or an auxiliary release. The other contact system only switches in the event of a short circuit. There is no signaling as a result of <b>switching off</b> with the actuator.</p> <p>In order to be able to switch on the motor starter protector again after a short circuit, the signaling switch must be reset manually after the error cause has been eliminated.</p> <p>The width of the signaling switch is 18 mm.</p>
<p><b>Right-hand side</b></p> <p><u>Notes:</u></p> <ul style="list-style-type: none"> <li>One auxiliary release can be mounted per motor starter protector/circuit breaker.</li> <li>Accessories cannot be mounted on the right-hand side of the 3RV21 motor starter protectors for motor protection with overload relay function.</li> </ul>	<p><b>Auxiliary releases</b></p> <p>Shunt releases</p> <p>or</p> <p>Undervoltage releases</p> <p>or</p> <p>Undervoltage releases with leading auxiliary contacts 2 NO</p> <p>Own version for 3RV1011</p>	<p>For remote-controlled tripping of the motor starter protector/circuit breaker. The release coil should only be energized for short periods (see circuit diagrams).</p> <p>Trips the motor starter protector/circuit breaker when the voltage is interrupted and prevents the motor from being restarted accidentally when the voltage is restored. Used for remote-controlled tripping of the motor starter protector/circuit breaker.</p> <p>Particularly suitable for EMERGENCY OFF disconnection by way of corresponding EMERGENCY OFF pushbuttons according to IEC 60204-1.</p> <p>Function and use as for the undervoltage release without leading auxiliary contacts, but with the following additional function: the auxiliary contacts will open in switch position OFF to deenergize the coil of the undervoltage release, thus interrupting energy consumption. In the "tripped" position, these auxiliary contacts are not guaranteed to open. The leading contacts permit the motor starter protector/circuit breaker to reclose.</p> <p>The width of the auxiliary release is 18 mm.</p>
<p><b>Top</b></p> <p><u>Notes:</u></p> <ul style="list-style-type: none"> <li>Isolator modules cannot be used for 3RV1011, 3RV27 and 3RV28 motor starter protectors/circuit breakers.</li> <li>The isolator module for size S2 can be used only with 3RV2 motor starter protectors/circuit breakers up to max. 65 A.</li> <li>The isolator module cannot be used with the transverse auxiliary switch.</li> </ul>	<p><b>Isolator modules</b></p>	<p>Isolator modules can be mounted to the upper connection side of the motor starter protectors.</p> <p>The supply cable is connected to the motor starter protector through the isolator module.</p> <p>The plug can only be unplugged when the motor starter protector is open and isolates all 3 poles of the motor starter protector from the network. The shock-protected isolation point is clearly visible and secured with a padlock to prevent reinsertion of the plug.</p>

For a complete overview of which accessories can be used for the various motor starter protectors/circuit breakers, [see page 2/162](#).

<sup>1)</sup> The voltage range is valid for 100% (infinite) ON period. The response voltage lies at 0.9 of the lower limit of the voltage range.

<sup>2)</sup> The voltage range is valid for 5 s ON period at 50/60 Hz AC and DC. The response voltage lies at 0.85 of the lower limit of the voltage range.

<sup>3)</sup> One auxiliary release can be mounted on the right per motor starter protector/circuit breaker (does not apply to 3RV21 motor starter protectors/circuit breakers with overload relay function).

<sup>4)</sup> Not for 3RV1011 motor starter protectors.

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

##### Accessories > Busbar accessories

### Overview

#### Insulated 3-phase busbar system

3-phase busbar systems provide an easy, time-saving and clearly arranged means of feeding 3RV2 motor starter protectors/circuit breakers with screw terminals. Different versions are available for sizes S00 to S2 and can be used for the various different types of motor starter protectors/circuit breakers (size S0 up to 32 A).

The 3RV1915 3-phase busbar systems are generally unsuitable for the 3RV21 motor starter protectors with sizes S00 and S0 for motor protection with overload relay function.

The busbars are suitable for between two and five motor starter protectors/circuit breakers. However, any kind of extension is possible by clamping the connection tags of an additional busbar (rotated by 180°) underneath the terminals of the respective last motor starter protector/circuit breaker.

A combination of motor starter protectors/circuit breakers of size S00 and S0 is possible. The motor starter protectors/circuit breakers are supplied by appropriate infeed terminals.

SIRIUS 3-phase busbar system size S00/S0

SIRIUS 3-phase busbar system size S2

The 3-phase busbar systems are finger-safe. They are designed for any short-circuit stress which can occur at the output side of connected motor starter protectors/circuit breakers.

The 3-phase busbar systems can also be used to construct "Starters (Type E)" according to UL/CSA and for 3RV27 and 3RV28 circuit breakers according to UL 489. However, special infeed terminals, 3RV2925-5EB for sizes S00/S0 and 3RV2935-5E for size S2, must be used for this purpose, see page 2/200.

#### Terminal blocks and phase barriers for "Self-Protected Combination Motor Controllers (Type E)" according to UL 508/UL 60947-4-1

Note:

UL 508/UL 60947-4-1 approval demands 1-inch clearances and 2-inch creepage distances for "Self-Protected Combination Motor Controllers (Type E)". The following terminal blocks or phase barriers must be used for the 3RV20 motor starter protectors with screw terminals. This also applies to construction with the 8US busbar adapter. 3RV20 motor starter protectors with spring-loaded terminals must be assembled with the 3RV29 infeed system for approval as "Self-Protected Combination Motor Controllers (Type E)" according to UL 508/UL 60947-4-1. The 3RV1011 motor starter protectors do not have UL approval as "Starters (Type E)".

The terminal block or phase barriers cannot be used in combination with the 3RV19.5 3-phase busbars.

For construction with 3-phase busbars, see "Busbar accessories", page 2/198 onwards.

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

#### 3RV29 infeed system

##### Overview

The 3RV29 infeed system is a convenient means of energy supply and distribution for a group of several motor starter protectors or complete load feeders with screw or spring-loaded terminals in sizes S00 and S0. Motor starter protectors or load feeders with a rated current of maximum 32 A each can be used. 3RV21 motor starter protectors/circuit breakers cannot be used in this system.

The system is based on a basic module complete with a lateral incoming unit (3-phase busbar with infeed). This infeed with spring-loaded terminals is mounted on the right or left, depending on the version, and can be supplied with a maximum conductor cross-section of 25 mm<sup>2</sup> (with end sleeve). A basic module has two sockets onto each of which a motor starter protector can be snapped.

Expansion modules (3-phase busbars for system expansion) are available for extending the system. The individual modules are connected through an expansion plug.

The electrical connection between the 3-phase busbars and the motor starter protectors is implemented through plug-in connectors. The complete system can be mounted on a TH 35 standard mounting rail according to IEC 60715, and can be expanded as required up to a maximum current carrying capacity of 63 A.

The system is mounted extremely quickly and easily thanks to the simple plug-in terminals. Thanks to the lateral infeed, the system also saves space in the control cabinet.

The additional height required for the infeed unit is only 30 mm. The alternative infeed possibilities on each side offer a high degree of flexibility for configuring the control cabinet: Infeed on left-hand or right-hand side as well as infeed on one side and outfeed on the other side to supply further loads are all possible. A terminal block with spring-loaded terminals in combination with a standard mounting rail enables the integration of not only SIRIUS motor starter protectors but also 1-phase, 2-phase and 3-phase components such as 5SY miniature circuit breakers or SIRIUS relay components.

The 3RV29 infeed system is approved in accordance with IEC up to 500 V. It is also UL-approved and authorized for "Self-Protected Combination Motor Controllers" (Starters (Type E)), for Starters (Type F) (Starters (Type E) + contactors) and for circuit breakers according to UL 489 (3RV27/3RV28).

##### Assembly kits for constructing the infeed system with spring-loaded terminals

The following versions can be ordered:

- Basic set for 2 feeders
- Expansion sets for 2 or 3 feeders

The assembly kits contain 3-phase busbars, plug-in connectors and contactor bases (see page 2/211).

##### Note:

Each set contains plug-in connectors for sizes S00 and S0.

Example: The basic set contains four plug-in connectors (two each for S00 and S0).

SIRIUS 3RV29 infeed system

## Protection equipment

### Motor starter protectors/circuit breakers

#### SIRIUS 3RV2 motor starter protectors/circuit breakers

#### 3RV29 infeed system

2

##### ① 3-phase busbars with infeed

A 3-phase busbar with infeed unit is required for connecting the incoming supply. These modules comprise one infeed module and two sockets which each accept one motor starter protector. A choice of two versions with infeed on the left or right is available. The infeed is connected to spring-loaded terminals. They permit an infeed with conductor cross-sections of up to 25 mm<sup>2</sup> with end sleeve. An end cover is supplied with each module.

##### ② 3-phase busbars for system expansion

The 3-phase busbars for system expansion support expansion of the system. There is a choice of modules with two or three sockets. The system can be expanded as required up to a maximum current carrying capacity of 63 A. An expansion plug is supplied with each module.

##### ③a Expansion plug

The expansion plug is used for electrical connection of adjacent 3-phase busbars. The current carrying capacity of this plug equals 63 A. One expansion plug is supplied with each 3-phase busbar for system expansion. Additional expansion plugs are therefore only required as spare parts.

##### ③b Extra-wide expansion plug

The wide expansion plug makes the electrical connection between two 3-phase busbars, thus performing the same function as the 3RV2917-5BA00 expansion plug; the electrical characteristics (e.g. a current carrying capacity of 63 A) are identical.

The 3RV2917-5E expansion plug is 10 mm wider than the 3RV2917-5BA00 expansion plug, hence in the plugged state there is a distance of 10 mm between the connected 3-phase busbars. This distance can be used to lay the auxiliary current and control current wiring ("wiring duct"). The motor starter protector and contactor can be wired from underneath, which means that the complete cable duct above the system can be omitted.

##### ④ End cover

The end cover is used to cover the 3-phase busbar at the open end of the system. This cover is therefore only required once for each system. An end cover is supplied with each 3-phase busbar system with infeed. Further end covers are therefore only required as spare parts.

##### ⑤ Terminal block for device infeed

A new addition to the system is a plug for outfeeding to a device slot within a module. This offers the option not only of connecting 3-phase loads to the system, but also of integrating 1-phase loads into the infeed system.

##### ⑥ Plug-in connector

The plug-in connector is used for the electrical connection between the 3-phase busbar and the 3RV2 or 3RV1011 motor starter protector. These plug-in connectors are available for screw or spring-loaded terminals.

##### ⑦ Contactor base

Load feeders can be assembled in the system using the S00 and S0 contactor base. The contactor bases are suitable for contactors of sizes S00 and S0 with screw and spring-loaded terminals and are simply snapped onto the 3-phase busbars. Direct-on-line starters and reversing starters are possible. One contactor base is required for direct-on-line starters and two are required for reversing starters.

To assemble load feeders for reversing starters, the contactor bases can be arranged alongside each other (90 mm overall width). In this case the mechanical interlocking of the contactors is possible. The S0 contactor bases are also suitable for soft starters size S00 and S0 with screw terminals.

The infeed system is designed for mounting on a TH 35 standard mounting rail with 7.5 mm overall depth. This standard mounting rail gives the contactor base a stable mounting surface to sit on. If standard mounting rails with a depth of 15 mm are used, the spacer connected to the bottom of the contactor base must be knocked out and plugged into the standard mounting rail mating piece, which is also located on the underside. Then the contactor base also has a stable mounting surface. When standard mounting rails with a depth of 7.5 mm are used, the spacer has no function and can be removed.

The link modules are used for direct on-line starters, in which case the use of a contactor base is not absolutely necessary. Motor starter protector and contactor assemblies can then be directly snapped onto the sockets of the 3-phase busbars. For feeders of sizes S00 and S0, the corresponding 3RA1921-1....., 3RA2911-2....., 3RA2921-1..... or 3RA2921-2..... link modules should generally be used.

##### ⑧ Terminal block

The 3RV2917-5D terminal block enables the integration of not only SIRIUS motor starter protectors but also 1-phase, 2-phase and 3-phase components. The three phases can be fed out of the system using the terminal block; which means that single-phase loads can also be integrated in the system. The terminal block is plugged into the slot of the expansion plug and thus enables outfeeding from the middle or end of the infeed system. The terminal block can be rotated through 180° and be locked to the support modules of the infeed system. In addition, the 45 mm wide TH 35 3RV1917-7B standard mounting rail option for screwing onto the support plate facilitates plugging the 1-phase, 2-phase and 3-phase components onto the infeed system.

### Connection methods

The monitoring and control devices are available with screw or spring-loaded terminals.

SIRIUS 3RP25 timing relays, 3UG458 insulation monitoring relays, SIRIUS 3RS2 temperature monitoring relays, SIRIUS 3RN2 thermistor motor protection and SIRIUS 3RS70 signal converters are available with screw terminals or spring-loaded terminals (push-in).

Screw terminals

Spring-loaded terminals, spring-loaded terminals (push-in)

The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.

### "Increased safety" type of protection EEx e/d according to ATEX directive 2014/34/EU

The communication-capable, modularly designed SIMOCODE pro motor management system (SIRIUS Motor Management and Control Devices) protects motors of types of protection EEx e and EEx d in hazardous areas.

The SIRIUS 3RN2 thermistor motor protection relay protects motors with types of protection EEx e and EEx d in hazardous areas.

### ATEX approval for operation in hazardous areas

The SIRIUS SIMOCODE pro 3UF7 motor management system is certified for the protection of motors in hazardous areas according to

- ATEX Ex I (M2); equipment group I, category M2 (mining)
- ATEX Ex II (2) GD; equipment group II, category 2 in area GD

The SIRIUS 3RN2011, 3RN2012-...30, 3RN2013 and 3RN2023 thermistor motor protection relays for PTC sensors are certified according to ATEX Ex II (2) G and D for environments with explosive gas or dust loads.

## Monitoring and control devices

### Relays

#### Timing relays

#### General data

#### Overview

7PV15, SIRIUS 3RP25 and SIRIUS 3RP20 timing relays

#### More information

Homepage, see [www.siemens.com/sirius-timing-relays](http://www.siemens.com/sirius-timing-relays)

Industry Mall, see [www.siemens.com/product?3RP](http://www.siemens.com/product?3RP)

Electronic timing relays are used in control, starting, and protective circuits for all switching operations involving time delays.

Their fully developed concept and space-saving, compact design make the SIRIUS 3RP timing relays ideal timer modules for control cabinet, switchgear and control manufacturers in the industry.

With their narrow design, the 7PV15 timing relays are ideal in particular for use in heating, ventilation and air-conditioning systems and in compressors. All 7PV15 timing relays in this enclosure version are suitable for snap-on mounting on TH 35 standard mounting rails according to IEC 60175. The enclosure complies with DIN 43880.

The SIRIUS 3RA28 function modules enable the assembly of starters and contactor assemblies for direct-on-line and wye-delta starting. They include the key control functions required for the particular feeder, e.g. timing and electrical interlocking. The function modules that function as timing relays are mounted quickly and simply on SIRIUS contactors – without any great wiring effort.

The SIRIUS 3RA28 solid-state time-delay auxiliary switches which can be mounted on contactors are designed for contactor coil voltages in the range from 24 to 240 V AC/DC (wide voltage range). Auxiliary switches for control and alarm signals are used specially for switching the smallest signals for electronics applications. They are used, for example, for allowing a pump or fan to run on, or for the delayed activation of a gate drive.

Simply by being plugged in place, the SIRIUS 3RT19 timing relays enable different functionalities required for the assembly of starters to be realized in the feeder. At the same time the timing relays for mounting on contactors reduce the wiring work required within the feeder and save space in the control cabinet.

#### Device series

##### SIRIUS timing relays for standard rail mounting

- SIRIUS 3RP25 timing relays, 17.5 mm and 22.5 mm, see page 2/215
- SIRIUS 3RP20 timing relays, 45 mm, see page 2/227
- 7PV15 timing relays, 17.5 mm

##### SIRIUS timing relays for mounting on contactors

- SIRIUS 3RA28 solid-state time-delay auxiliary switches for mounting on 3RT2 contactors and 3RH2 contactor relays,
- SIRIUS 3RA28 function modules for mounting on 3RT2 contactors and 3RH2 contactor relays
- SIRIUS 3RT19 timing relays for mounting on 3RT1 contactors

#### Benefits

- The right design for every application
- Clear-cut basic range with five basic units in the case of the 7PV15 timing relays, and up to seven basic units in the case of the 3RP timing relays
- Considerable logistical advantages thanks to versions with wide voltage and wide time setting range
- No tools required for assembly or disassembly on standard mounting rails
- Cadmium-free relay contacts
- Recyclable, halogen-free enclosure
- Optimum price/performance ratio
- Versions with logical separation
- Low variance: One design for distribution boards and for control cabinets
- Compliance with EMC requirements for buildings
- Environmentally friendly laser inscription instead of printing containing solvents
- Versions as snap-on modules for reducing wiring and saving space in the control cabinet
- Versions with coated printed circuit board
- Versions with screw terminals or alternatively with spring-loaded terminals

#### Application

##### Timing relays with ON-delay

- Interference pulse suppression (gating of interference pulses)
- Gradual startup of motors so as not to overload the power supply

##### Timing relays with OFF-delay

- Generation of overtravel functions following removal of voltage
- Gradual, delayed shutdown, e.g. of motors or fans, to allow a plant to be shut down selectively

##### Clock-pulse relay

- Flashing, asymmetrical

##### Wye-delta timing relays

- Switching over motors from wye to delta with a dead interval of 50 ms to prevent phase-to-phase short circuits

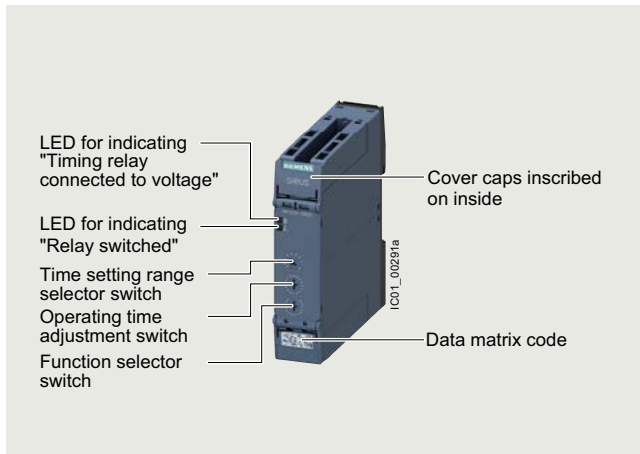

##### Multifunctional timing relays

- Maximum flexibility, with a device for every application
- Available with relay and semiconductor output
- Versions for railway applications for more exacting requirements (e.g. temperature range, vibration/shock resistance and EMC)

##### Watchdog function

- Monitoring of cyclic events

## Overview

SIRIUS 3RP25 timing relay

## More information

Homepage, see [www.siemens.com/sirius-timing-relays](http://www.siemens.com/sirius-timing-relays)Industry Mall, see [www.siemens.com/product?3RP25](http://www.siemens.com/product?3RP25)Conversion tool, see [www.siemens.com/conversion-tool](http://www.siemens.com/conversion-tool)Simulator, see <https://support.industry.siemens.com/cs/ww/en/view/103556391>Video: [What are the benefits of SIRIUS 3RP25 timing relay?](#)

Electronic timing relays for general use in control systems and mechanical engineering with:

- 1 or 2 CO, 1 NO (semiconductor) or 3 NO
- Monofunction or multifunction
- Combination voltage or wide voltage range
- Single or selectable time setting ranges
- Switch position indication and voltage indication by LED
- Versions with coated printed circuit board

## Monitoring and control devices

### Relays

#### Timing relays

#### SIRIUS 3RP25 timing relays, 17.5 mm and 22.5 mm

##### 3RP2505 multifunctional timing relays

###### Two setting options for implementing the multifunctions (A-M):

- ① Determination of 13 functions by the setting A to M, with 1 CO, 1 NO, 2 CO that switch in parallel.
- ② Extended function variance by selecting the time range and determining, whether 2 CO switch in parallel or whether 1 CO switches with delay + 1 CO switches immediately (1 CO + 1 CO)

Setting the functions on the device

The functions of the 3RP2505 multifunctional timing relays can be set by means of the function selector switch. Whether both CO contacts are switched in parallel or one CO contact with a delay and one instantaneously and the choice of time setting range are set by means of the time setting range selector switch. The exact operating time can be adjusted with the operating time switch.

###### Overview of functions

Identifica- tion letter	13 functions	27 functions
	1 CO contact (1 CO), 1 NO contact (1 NO) semiconductor, 2 CO contacts switched in parallel (2 CO) or 2 CO contacts force-guided and switched in parallel with delay (2 CO)	13 functions (A - M) 2 CO contacts switched in parallel (2 CO) + 13 functions (A - M) 1 delayed CO contact + 1 instantaneous CO contact (1 CO + 1 CO) and wye-delta function
<b>A</b>	ON-delay	ON-delay and instantaneous contact
<b>B</b>	OFF-delay with control signal	OFF-delay with control signal and instantaneous contact
<b>C</b>	ON-delay/OFF-delay with control signal	ON-delay/OFF-delay with control signal and instantaneous contact
<b>D</b>	Flashing, symmetrical, starting with interval	Flashing, symmetrical, starting with interval and instantaneous contact
<b>E</b>	Passing make contact, interval relay	Passing make contact, interval relay and instantaneous contact
<b>F</b>	Retriggerable interval relay with deactivated control signal (passing break contact with control signal)	Retriggerable interval relay with deactivated control signal (passing break contact with control signal) and instantaneous contact
<b>G</b>	Passing make contact, with control signal, not retriggerable (pulse-forming with control signal)	Passing make contact, with control signal, not retriggerable, (pulse-forming with control signal) and instantaneous contact
<b>H</b>	Additive ON-delay, instantaneous OFF with control signal	Additive ON-delay, instantaneous OFF with control signal and instantaneous contact
<b>I</b>	Additive ON-delay with control signal	Additive ON-delay with control signal and instantaneous contact
<b>J</b>	Flashing, symmetrical, starting with pulse	Flashing, symmetrical, starting with pulse and instantaneous contact
<b>K</b>	Pulse-delayed (fixed pulse (at 1 s) and settable pulse delay)	Pulse-delayed (fixed pulse (at 1 s) and settable pulse delay) and instantaneous contact
<b>L</b>	Pulse-delayed with control signal (fixed pulse (at 1 s) and settable pulse delay)	Pulse-delayed with control signal (fixed pulse (at 1 s) and settable pulse delay) and instantaneous contact
<b>M</b>	Retriggerable interval relay with activated control signal (watchdog)	Retriggerable interval relay with activated control signal and instantaneous contact (watchdog)
--	--	Wye-delta function

With a set of foil labels the timing relay can be legibly marked with the functions which can be selected on the timing relay. This is supplied together with the multifunctional timing relay.

The same potential must be applied to terminals A. and B.

###### Note:

The activation of loads parallel to the start input is permissible when using AC/DC control voltage.

Diagram

## Simulator

3RP25 simulator

The 3RP25 simulator visualizes different time functions in the 3RP25 timing relay. Any fault scenario can be simulated.

The tool is available free of charge, see <https://support.industry.siemens.com/cs/ww/en/view/103556391>.

2

## Benefits

- Easy stock keeping and logistics thanks to low variance of devices
- Reduced space requirement in the control cabinet thanks to variants in width 17.5 mm and 22 mm
- Consistent for all functions thanks to wide voltage range from 12 to 240 V AC/DC
- Up to 27 functions according to IEC 61812 in the multifunctional timing relay with wide voltage range
- Multifunctional timing relay with semiconductor output for high switching frequencies, bounce-free and wear-free switching

## Standards and approvals

- IEC 60721-3-3 "Classification of environmental conditions"
- IEC 61812-1/DIN VDE 0435 Part 2021 "Specified time relays for industrial use"
- IEC 61000-6-2, IEC 61000-6-3 and IEC 61000-6-4 "Electromagnetic compatibility"
- IEC 60947-5-1 "Low-voltage switchgear and controlgear – Electromechanical control circuit devices"

## Application

Timing relays are used in control, starting, and protective circuits for all switching operations involving time delays. They guarantee a high level of functionality and a high repeat accuracy of timer settings.

Use in environments exposed to dust, condensation, rapid temperature changes and corrosion is possible thanks to the standard coating of the printed circuit board according to IPC-610. Suitable for applications in rail, agriculture, mining, woodworking, etc.

## Enclosure version

All timing relays are suitable for snap-on mounting on TH 35 standard mounting rails according to IEC 60715 or for screw fixing.

## Monitoring and control devices

### Relays

#### Timing relays

#### SIRIUS 3RP25 timing relays, 17.5 mm and 22.5 mm

##### Possibilities of operation of the 3RP2560-.SW30 timing relay

Operation 1: Start contact B./A2 is open when control supply voltage A./A2 is applied

The control supply voltage is applied to A./A2 and there is no control signal on B./A2. This starts the  $\Upsilon\Delta$  timing. The idling time (coasting time) is started by applying a control signal to B./A2. When the set time  $t_{\text{idling}}$  (30 to 600 s) has elapsed, the output relays (17/38 and 17/28) are reset. If the control signal on B./A2 is switched off (minimum OFF period 270 ms), a new timing is started.

Note:

Observe response time (dead time) of 400 ms on energizing control supply voltage until contacts 17/18 and 17/38 close.

Operation 1

Operation 2: Start contact B./A2 is closed when control supply voltage A./A2 is applied

If the control signal B./A2 is already present when the control supply voltage A./A2 is applied, **no** timing is started. The timing is only started when the control signal B./A2 is switched off.

Operation 2

Operation 3: Start contact B./A2 closes while star time is running

If the control signal B./A2 is applied again during the star time, the idling time starts and the timing is terminated normally.

Operation 3

Operation 4: Start contact B./A2 opens while delta time is running and is applied again

If the control signal on B./A2 is applied and switched off again during the delta time, although the idling time has not yet elapsed, the idling time (coasting time) is reset to zero. If the control signal is re-applied to B./A2, the idling time is restarted.

Operation 4

##### Legend

- Timing relay energized
- Contact closed
- Contact open

$t_Y$  = Star time 1 to 20 s

$t_{\text{idling}}$  = Idling time (coasting time) 30 to 600 s

Note:

The following applies to all operations: The pressure switch controls the timing via B./A2.

Application example based on standard operation (operation 1):  
For example, use of 3RP2560 for compressor control

Frequent starting of compressors strains the network, the machine, and the increased costs for the operator. The new timing relay prevents frequent starting at times when there is high demand for compressed air. A special control circuit prevents the compressor from being switched off immediately when the required air pressure in the tank has been reached. Instead, the valve in the intake tube is closed and the compressor runs in "Idling" mode, i.e. in no-load operation for a specific time which can be set from 30 to 600 s.

If the pressure falls within this time, the motor does not have to be restarted again, but can return to nominal load operation from no-load operation.

If the pressure does not fall within this idling time, the motor is switched off.

The pressure switch controls the timing via B./A2.

The control supply voltage is applied to A./A2 and the start contact B./A2 is open, i.e. there is no control signal on B./A2 when the control supply voltage is applied. The pressure switch signals "too little pressure in system" and starts the timing by way of terminal B./A2. The compressor is started, enters  $\Upsilon\Delta$  operation, and fills the pressure tank.

When the pressure switch signals "sufficient pressure", the control signal B./A2 is applied, the idling time (coasting time) is started, and the compressor enters no-load operation for the set period of time from 30 to 600 s. The compressor is then switched off. The compressor is only restarted if the pressure switch responds again (low pressure).

## Type of electrical connection

- Screw terminals
- Spring-loaded terminals (push-in)

- Force-guided contacts.
- Optionally 1 CO delayed + 1 CO instantaneous.
- With 3RP2574-.NM20 and 3RP2576-.NM20, connection of 200 to 240 V AC, 50/60 Hz control voltage is also possible.
- Setting of output contacts in as-supplied state not defined (bistable relay). Application of the control supply voltage once results in contact changeover to the correct setting.

## Notes:

For accessories, see page 2/226.

In the case of 3RP2505, the functions can be adjusted by means of function selector switches on the device. With a set of foil labels the timing relay can be legibly marked with the functions which can be selected on the timing relay. This is included in the scope of supply. The same potential must be applied to terminals A. and B.

For functions, see the overview of functions on page 2/216.

## Overview

SIRIUS 3RP20 timing relay

SIRIUS 3RP20 electronic timing relays for use in control systems and mechanical engineering with:

- 1 or 2 CO contacts
- Multifunction or monofunction
- Wide voltage range or combination voltage
- Single or selectable time setting ranges
- Switch position indication and voltage indication by LED

## Standards

The timing relays comply with:

- IEC 60721-3-3 "Classification of environmental conditions"
- IEC 61812-1 "Specified time relays for industrial use"
- IEC 61000-6-2 and IEC 61000-6-4 "Electromagnetic compatibility"
- IEC 60947-5-1 "Low-voltage switchgear and controlgear – Electromechanical control circuit devices"
- IEC 60947-1, Annex N "Protective separation"

## Multifunction

The functions of the 3RP2005 multifunctional timing relays can be set by means of the function selector switch. Insert labels can be used to adjust different functions of the timing relay clearly and unmistakably. The corresponding labels can be ordered as an accessory. The same potential must be applied to terminals A. and B.

For functions, see 3RP2901 label set, page 2/232.

## Note:

The activation of loads parallel to the start input is not permissible when using AC control voltage.

## Monitoring and control devices

### Relays

#### Timing relays

#### SIRIUS 3RP20 timing relays, 45 mm

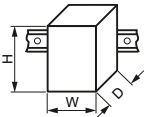

##### Benefits

- Suitable for 3RT miniature contactors
- Uniform design
- Ideal for small distance between standard mounting rails and/or for low mounting depth, e.g. in control boxes
- Labels are used on the multifunctional timing relay to document the function that has been set

##### Application

Timing relays are used in control, starting, and protective circuits for all switching operations involving time delays. They guarantee a high level of functionality and a high repeat accuracy of timer settings.

## SIRIUS 3RR21, 3RR22 monitoring relays for mounting on 3RT2 contactors

## Current and active current monitoring

## Overview

SIRIUS 3RR2242, 3RR2142, 3RR2243 current monitoring relays

## More information

Homepage, see [www.siemens.com/sirius-monitoring-relays](http://www.siemens.com/sirius-monitoring-relays)Industry Mall, see [www.siemens.com/product?3RR21](http://www.siemens.com/product?3RR21)

Video: SIRIUS 3RR2 current monitoring relays

The SIRIUS 3RR2 current monitoring relays are suitable for load monitoring of motors or other loads. In 2 or 3 phases they monitor the rms value of AC currents for overshooting or undershooting of set threshold values.

Whereas apparent current monitoring is used above all in connection with the rated torque or in case of overload, the active current monitoring option can be used to observe and evaluate the load factor over a motor's entire torque range.

The 3RR2 current monitoring relays can be integrated directly in the feeder by mounting on the 3RT2 contactor; separate wiring of the main circuit is therefore superfluous. No separate transformers are required.

For a line-oriented configuration or simultaneous use of an overload relay, terminal supports for stand-alone installation are available for separate standard rail mounting.

## Versions

## Basic versions

The basic versions with 2-phase apparent current monitoring, a CO contact output and analog adjustability provide a high level of monitoring reliability especially in the rated and overload range.

## Standard versions

The standard versions monitor the current in 3 phases with selectable active current monitoring. They have additional diagnostics options such as residual-current monitoring and phase sequence monitoring, and they are also suitable for monitoring motors below the rated torque. These devices have an additional independent semiconductor output, an actual value indicator, and are digitally adjustable.

Both versions are available optionally with screw or spring-loaded terminals, in each case for sizes S00 and S0. With variants of size S2 the main conducting paths always have screw terminals; the control current side can have screw or spring-loaded terminals.

## Note:

In addition to the features of the standard versions, the 3RR24 monitoring relays for mounting on 3RT2 contactors for IO-Link also offer the possibility of transmitting the measured values and diagnostics data to a controller via an IO-Link. Furthermore, the devices can be parameterized on the devices themselves or via IO-Link.

For more information, see page 2/241 onwards.

##### Note:

The Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

#### Benefits

- Can be mounted directly on 3RT2 contactors and 3RA23 reversing contactor assemblies, in other words, there is no need for additional wiring in the main circuit
- Optimally coordinated with the technical characteristics of the 3RT2 contactors
- No separate current transformer required
- Versions with wide voltage supply range
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Display of actual value and status messages
- All versions with removable control current terminals
- All versions with screw terminals or spring-loaded terminals
- Simple determination of the threshold values through direct reference to actually measured values for setpoint loading
- Range monitoring and selectable active current measurement mean that only one device for monitoring a motor is required along the entire torque curve
- In addition to current monitoring it is also possible to monitor for broken cables, phase failure, phase sequence, residual current and motor blocking

#### Application

- Monitoring for current overshoot and undershoot
- Monitoring of broken conductors
- Monitoring of no-load operation and load shedding, e.g. in the event of a torn V-belt or no-load operation of a pump
- Monitoring of overload, e.g. on conveyor belts or cranes due to an excessive load
- Monitoring the functionality of electrical loads such as heaters
- Monitoring of wrong phase sequence on mobile equipment such as compressors or cranes
- Monitoring of high-resistance ground faults, e.g. caused by damaged insulation or moisture

Industry Mall, see [www.siemens.com/product?3RR24](http://www.siemens.com/product?3RR24)

Video: SIRIUS 3RR2 current monitoring relays

The SIRIUS 3RR24 current monitoring relays for IO-Link are suitable for the load monitoring of motors or other loads. In 3 phases they monitor the rms value of AC currents for overshooting or undershooting of set threshold values.

Whereas apparent current monitoring is used above all in connection with the rated torque or in case of overload, the active current monitoring option, which is also selectable, can be used to observe and evaluate the load factor over a motor's entire torque range.

The 3RR24 current monitoring relays for IO-Link can be integrated directly in the feeder by mounting on the 3RT2 contactor; separate wiring of the main circuit is therefore superfluous. No separate transformers are required.

For a line-oriented configuration or simultaneous use of an overload relay, terminal supports for stand-alone installation are available for separate standard rail mounting.

The SIRIUS 3RR24 current monitoring relays for IO-Link also offer many other options based upon the monitoring functions of the conventional SIRIUS 3RR2 monitoring relays:

- Measured value transmission to a controller, including resolution and unit, may be parameterizable as to which value is cyclically transmitted
- Transmission of alarm flags to a controller
- Full diagnostics capability by inquiry as to the cause of the fault in the diagnostics data record
- Remote parameterization is also possible, in addition to or instead of local parameterization

- Rapid parameterization of the same devices by duplication of the parameterization in the controller
- Parameter transmission through upload to a controller by IO-Link call or by parameter server (if IO-Link master from IO-Link specification V1.1 and higher is used)
- Consistent central data storage in the event of parameter change locally or via a controller
- Automatic reparameterizing when devices are exchanged
- Blocking of local parameterization via IO-Link possible
- Faults are saved in parameterizable and non-volatile fashion to prevent an automatic startup after voltage failure and to make sure diagnostics data are not lost
- Integration into the automation level provides the option of parameterizing the monitoring relays at any time via a display unit, or displaying the measured values in a control room or locally at the machine/control cabinet.
- The MindSphere app SIRIUS Asset Monitor enables access to the SIRIUS 3RR24 current monitoring relay anytime and anywhere. It provides the user with detailed information on the device status as well as fault messages and warnings in a clearly arranged form.

Even without communication via IO-Link the devices continue to function fully autonomously:

- Parameterization can take place locally at the device, independently of a controller.
- In the event of failure or before the controller becomes available the monitoring relays work as long as the control supply voltage (24 V DC) is present.
- If the monitoring relays are operated without the controller, the 3RR24 monitoring relays for IO-Link have, thanks to the integrated SIO mode, an additional semiconductor output, which switches when the adjustable warning threshold is exceeded.

Thanks to the combination of autonomous monitoring relay function and integrated IO-Link communication, redundant sensors and/or analog signal converters – which previously took over the transmission of measured values to a controller, leading to considerable extra cost and wiring overhead – are no longer needed.

Because the output relays are still present, the monitoring relays increase the functional reliability of the system, since only the controller can fulfill the control tasks if the current measured values are available, whereas the output relays can also be used for the disconnection of the system if limit values that cannot be reached during operation are exceeded.

For more information on the IO-Link communication system.

Notes on security

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see [www.siemens.com/industrialsecurity](http://www.siemens.com/industrialsecurity).

## Monitoring and control devices

3RR2443	8 ... 80	With stand-alone installation support	With stand-alone installation support	✓

✓ Available

#### Notes:

Devices required for communication via IO-Link:

- Any controller that supports IO-Link (e.g. ET 200SP with CPU or S7-1200), see [Catalog ST 70](#).
- IO-Link master (e.g. CM 4xIO-Link for SIMATIC ET 200SP or SM 1278 for S7-1200).

Each monitoring relay requires an IO-Link channel.

##### Benefits

- Can be mounted directly on 3RT2 contactors and 3RA23 reversing contactor assemblies, in other words, there is no need for additional wiring in the main circuit
- Optimally coordinated with the technical characteristics of the 3RT2 contactors
- No separate current transformer required
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Display of actual value and status messages
- All versions with removable control current terminals
- All versions with screw or spring-loaded terminals
- Simple determination of the threshold values through direct reference to actually measured values for setpoint loading
- Range monitoring and selectable active current measurement mean that only one device for monitoring a motor is required along the entire torque curve
- In addition to current monitoring it is also possible to monitor for current asymmetry, broken cables, phase failure, phase sequence, residual current and motor blocking
- Integrated counter for operating cycles and operating hours to support requirements-based maintenance of the monitored machine or application
- Simple cyclical transmission of the current measured values, relay switching states and events to a controller
- Remote parameterization
- Automatic reparameterizing when devices are exchanged
- Simple duplication of identical or similar parameterizations
- Reduction of control current wiring
- Elimination of testing costs and wiring errors
- Reduction of configuration work
- Integration in TIA means clear diagnostics if a fault occurs
- Cost saving and space saving in control cabinet due to the elimination of AI and IO modules as well as analog signal converters and duplicated sensors

##### Application

- Monitoring for current overshoot and undershoot
- Monitoring of broken conductors
- Monitoring of no-load operation and load shedding, e.g. in the event of a torn V-belt or no-load operation of a pump
- Monitoring of overload, e.g. on pumps due to a dirty filter system
- Monitoring the functionality of electrical loads such as heaters
- Monitoring of wrong phase sequence on mobile equipment such as compressors or cranes
- Monitoring of high-resistance short circuits or ground faults, e.g. caused by damaged insulation or moisture

The use of SIRIUS monitoring relays for IO-Link is particularly recommended for machines and plants in which these relays, in addition to their monitoring function, are to be connected to the automation level for the rapid, simple and fault-free provision of the current measured values and/or for remote parameterization.

The monitoring relays can either relieve the controller of monitoring tasks or, as a second monitoring entity in parallel to and independent of the controller, increase the reliability in the process or in the system. In addition, the elimination of AI and IO modules allows the width of the controller to be reduced despite significantly expanded functionality.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG5 monitoring relays for stand-alone installation

#### DC load monitoring

#### Overview

SIRIUS 3UG546 DC load monitoring relays

#### More information

Homepage, see [www.siemens.com/sirius-monitoring-relays](http://www.siemens.com/sirius-monitoring-relays)

Industry Mall, see [www.siemens.com/product?3UG5](http://www.siemens.com/product?3UG5)

The SIRIUS 3UG546 DC load monitoring relays are suitable for monitoring motors, batteries, and other DC equipment. They are also suitable for applications where batteries are used. The devices monitor the DC current, voltage, and actual power for overshooting or undershooting of the set limit values in 1 or 2 channels. The relays have a CO contact output for alarms and operate on the closed-circuit principle (NC).

The devices are parameterized via PROFINET, and transfer the measured values and diagnostic messages to a controller. Besides providing detailed fault diagnostics, the integrated energy counters, operating hours counters, and operating cycle counters can also be read out and reset.

When metering energy consumption, the SIRIUS 3UG546 DC load monitoring relays distinguish the direction of current flow and can thus, for example, separately sense the quantities of energy stored in or drawn from a battery.

#### Benefits

- Wide voltage measuring range of up to 800 V
- 60 V versions especially for applications where batteries are used
- Detection and monitoring of current, voltage and power in a single device
- Detailed fault diagnostics
- Energy metering with distinction of direction of current flow
- Communication and visualization via PROFINET and thus quick and easy integration for visualizing plant energy values
- Integration in the TIA Portal
- Customary screw terminals for quick and reliable wiring
- Device replacement without renewed wiring thanks to removable terminals

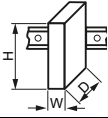

**Application**

- Exhaustive discharge protection on battery-operated vehicles
- Acquisition of energy flows, incl. energy recovery, e.g. for robots
- DC line monitoring
- DC heaters
- Lighting systems
- Energy management
- Condition monitoring

The SIRIUS 3UG546 DC load monitoring relays monitor a DC load current circuit for undershooting or overshooting of set limit values in 1 or 2 channels. Current, voltage, and power can be monitored separately. When the relays measure the current, they also detect the direction of current and have separate counters for measuring energy consumption and energy recovery.

The devices count the operating cycles and the operating hours of the connected loads as well as the operating cycles of the internal relay. All counters can be monitored for settable limit values and the counter statuses can be reset (with the exception of the operating cycle counter of the internal relay).

The SIRIUS 3UG546 DC load monitoring relays are parameterized exclusively via a PROFINET interface. All measured values and counter values as well as other diagnostics data are transmitted to a controller via PROFINET. The relays can also be operated without PROFINET. If communication fails, the monitoring function continues to be reliably executed. The internal relay, which is switched as a signaling output that responds when a set limit value is undershot or overshoot, responds to detected system faults.

All monitored counter values and measured values can be additionally assigned a warning limit, which generates an alarm via PROFINET when the set value is undershot or overshoot. Violations of the set limit values are also signaled as an alarm via PROFINET.

The devices are supplied via an external 24 V DC voltage source.

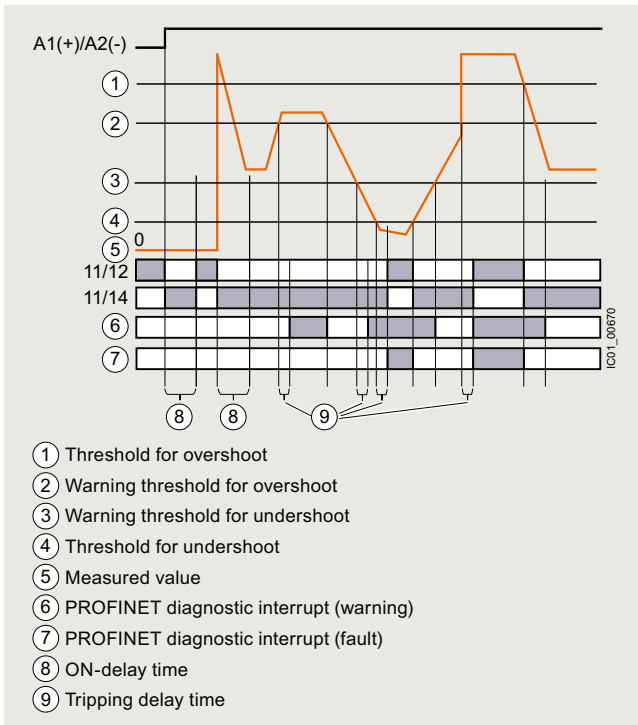

The integral counters for operating hours and operating cycles support operators in requirement-oriented plant maintenance. The operating hours counter outputs the time during which a measurable current flows. The properties of the insulation material of the motor windings, for example, deteriorate during operation due to the thermal load. The operating hours serve as an indicator of upcoming maintenance or replacement of machine parts and system components.

The operating cycles counter is incremented by one each time a breaking operation of the monitored load is detected (transition from current flow to no measurable current flow). The number of operating cycles serves as an indicator of upcoming maintenance or replacement of contact blocks. Arcs in breaking operations cause high loads and wear in particular in DC current circuits.

With the closed-circuit principle selected upon application of the control supply voltage

Monitoring for overshooting and undershooting of a measured value including parameterized warning limit/current flow in one direction only/automatic RESET

Monitoring for overshooting of a measured value including parameterized warning limit/manual RESET

Monitoring for overshooting and undershooting of a measured value including parameterized warning limit/current flow in both directions (energy consumption and energy recovery)/ automatic RESET

## Overview

SIRIUS 3UG4 monitoring relay

## More information

Homepage, see [www.siemens.com/sirius-monitoring-relays](http://www.siemens.com/sirius-monitoring-relays)

Industry Mall, see [www.siemens.com/product?3UG45](http://www.siemens.com/product?3UG45)

Conversion tool, see [www.siemens.com/conversion-tool](http://www.siemens.com/conversion-tool)

The field-proven SIRIUS monitoring relays for electrical and mechanical variables enable constant monitoring of all important characteristic quantities that provide information about the functional capability of a plant. Both sudden disturbances and gradual changes, which may indicate the need for maintenance, are detected. Thanks to their relay outputs, the monitoring relays permit direct disconnection of the affected system components as well as alerting (e.g. by switching a warning lamp).

Thanks to adjustable delay times the monitoring relays can respond very flexibly to brief faults such as voltage dips or load changes. This avoids unnecessary alarms and disconnections while enhancing plant availability.

The individual 3UG4 monitoring relays offer the following functions in various combinations:

- Undershooting and/or overshooting of liquid levels
- Phase sequence
- Phase failure, neutral conductor failure
- Phase asymmetry
- Undershooting and/or overshooting of limit values for voltage
- Undershooting and/or overshooting of limit values for current
- Undershooting and/or overshooting of limit values for power factor
- Monitoring of the active current or the apparent current
- Monitoring of the residual current
- Monitoring of the insulation resistance
- Undershooting and/or overshooting of limit values for speed

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

#### General data

#### Benefits

- Customary screw and spring-loaded terminals for quick and reliable wiring
- Fast commissioning thanks to menu-guided parameterization and actual value display for limit value determination
- Reduced space requirement in the control cabinet thanks to a consistent width of 22.5 mm
- Parameterizable monitoring functions, delay times, RESET response, etc.
- Reduced stockkeeping thanks to minimized variance and large measuring ranges
- Wide-voltage power supply units for global applicability
- Device replacement without renewed wiring thanks to removable terminals
- Reliable system diagnostics thanks to actual value display and connectable fault storage
- Rapid diagnostics thanks to unambiguous fault messages on the display

#### Application

The SIRIUS 3UG4 monitoring relays monitor the most diverse electrical and mechanical quantities in the feeder, and provide reliable protection against damage in the plant. For this purpose, they offer freely parameterizable limit values and diverse options for adapting to the respective task, and in the event of a fault, they provide clear diagnostics information.

The digitally adjustable products also display the current measured values direct on the device. This not only facilitates the display of valuable plant status information during operation, it also enables adjustment of the monitored limit values in accordance with the actual conditions.

The positive result: More selective avoidance of production faults – sustained increases in availability and productivity.

The 3UG4 monitoring relays are available for the following applications:

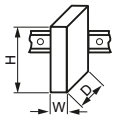

- Line and 1-phase voltage monitoring
- 1-phase current monitoring or power factor and active current monitoring
- Residual-current monitoring
- Insulation monitoring
- Level monitoring
- Speed monitoring

## Overview

SIRIUS 3UG4616 monitoring relay

Electronic line monitoring relays provide maximum protection for mobile machines and plants or for unstable networks. Network and voltage faults can thus be detected early and rectified before far greater damage ensues.

Depending on the version, the relays monitor phase sequence, phase failure with and without N conductor monitoring, phase asymmetry, undervoltage or overvoltage.

Phase asymmetry is evaluated as the difference between the greatest and the smallest phase voltage relative to the greatest phase voltage. Undervoltage or overvoltage exists when at least one phase voltage deviates by 20% from the set rated system voltage or the directly set limit values are overshoot or undershot. The rms value of the voltage is measured.

With the 3UG4617 or 3UG4618 relay, a wrong direction of rotation can also be corrected automatically.

## Benefits

- Can be used without auxiliary voltage in any network from 160 to 630 V AC worldwide thanks to wide voltage range
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Width 22.5 mm
- Permanent display of actual value and line fault type on the digital versions
- Automatic correction of the direction of rotation by distinguishing between power system faults and wrong phase sequence
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

## Application

The relays are used above all for mobile equipment, e.g. air conditioning compressors, refrigerating containers, building site compressors and cranes.

Function	Application
Phase sequence	<ul style="list-style-type: none"> <li>• Direction of rotation of the drive</li> </ul>
Phase failure	<ul style="list-style-type: none"> <li>• A fuse has tripped</li> <li>• Failure of the control supply voltage</li> <li>• Broken cable</li> </ul>
Phase asymmetry	<ul style="list-style-type: none"> <li>• Overheating of the motor due to asymmetrical voltage</li> <li>• Detection of asymmetrically loaded networks</li> </ul>
Undervoltage	<ul style="list-style-type: none"> <li>• Increased current on a motor with corresponding overheating</li> <li>• Unintentional resetting of a device</li> <li>• Network collapse, particularly with battery power</li> </ul>
Oversvoltage	<ul style="list-style-type: none"> <li>• Protection of a plant against destruction due to overvoltage</li> </ul>

## Technical specifications

### 3UG4511 monitoring relays

The 3UG4511 phase sequenced relay monitors the phase sequence in a 3-phase network. No adjustments are required for operation. The device has an internal power supply and works using the closed-circuit principle. If the phase sequence at the terminals L1-L2-L3 is correct, the output relay picks up after the delay time has elapsed and the green LED is lit. If the phase sequence is wrong, the output relay remains in its rest position.

#### Note:

When one phase fails, connected loads (motor windings, lamps, transformers, coils, etc.) create a feedback voltage at the terminal of the failed phase due to the network coupling. Because the 3UG4511 relays are not resistant to voltage feedback, such a phase failure is not detected. Should this be required, then the 3UG4512 monitoring relay must be used.

### Correct phase sequence

### Wrong phase sequence

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

#### Line monitoring

##### 3UG4512 monitoring relays

The 3UG4512 line monitoring relay monitors 3-phase networks with regard to phase sequence, phase failure and phase asymmetry of 10%. Thanks to a special measuring method, a phase failure is reliably detected in spite of the wide voltage range from 160 to 690 V AC and feedback through the load of up to 90%. The device has an internal power supply and works using the closed-circuit principle. No adjustments are required. If the line voltage is switched on, the green LED will light up. If the phase sequence at the terminals L1-L2-L3 is correct, the output relay picks up. If the phase sequence is wrong, the red LED flashes and the output relay remains in its rest position. If a phase fails, the red LED is permanently lit and the output relay drops.

##### Note:

The red LED is a fault diagnostic indicator and does not show the current relay status. The 3UG4512 monitoring relay is suitable for line frequencies of 50/60 Hz.

##### Phase failure

##### Wrong phase sequence

##### 3UG4513 monitoring relays

The 3UG4513 line monitoring relay monitors 3-phase networks with regard to phase sequence, phase failure, phase asymmetry and undervoltage of 20%. The device has an internal power supply and works using the closed-circuit principle. The hysteresis is 5%. The integrated response delay time T is adjustable from 0 to 20 s and responds to undervoltage. If the direction is incorrect, the device switches off immediately. Thanks to a special measuring method, a phase failure is reliably detected in spite of the wide voltage range from 160 to 690 V AC and feedback through the load of up to 80%. If the line voltage is switched on, the green LED will light up. If the phase sequence at the terminals L1-L2-L3 is correct, the output relay picks up. If the phase sequence is wrong, the red LED flashes and the output relay remains in its rest position. If a phase fails, the red LED is permanently lit and the output relay drops.

##### Note:

The red LED is a fault diagnostic indicator and does not show the current relay status. The 3UG4513 monitoring relay is suitable for line frequencies of 50/60 Hz.

##### Phase failure and undervoltage

##### Wrong phase sequence

**3UG4614 monitoring relays**

The 3UG4614 line monitoring relay has a wide voltage range input and an internal power supply. The device is equipped with a display and is parameterized using three buttons. The unit monitors 3-phase networks with regard to phase asymmetry from 5 to 20%, phase failure, undervoltage and phase sequence. The hysteresis is adjustable from 1 to 20 V. In addition the device has a response delay and ON-delay from 0 to 20 s in each case. The response delay time responds to phase asymmetry and undervoltage. If the direction is incorrect, the device switches off immediately. Thanks to a special measuring method, a phase failure is reliably detected in spite of the wide voltage range from 160 to 690 V AC and feedback through the load of up to 80%.

The 3UG4614 monitoring relay can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET.

**3UG4615/3UG4616 monitoring relays**

The 3UG4615/3UG4616 line monitoring relay has a wide voltage range input and an internal power supply. The device is equipped with a display and is parameterized using three buttons. The 3UG4615 device monitors 3-phase networks with regard to phase failure, undervoltage, overvoltage and phase sequence. The 3UG4616 monitoring relay monitors the neutral conductor as well. The hysteresis is adjustable from 1 to 20 V. In addition the device has two separately adjustable delay times for overvoltage and undervoltage from 0 to 20 s in each case. If the direction of rotation is incorrect, the device switches off immediately. Thanks to a special measuring method, a phase failure is reliably detected in spite of the wide voltage range from 160 to 690 V AC and feedback through the load of up to 80%.

The 3UG4615/3UG4616 monitoring relay can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

#### Line monitoring

##### 3UG4617/3UG4618 monitoring relays

The 3UG4617/3UG4618 line monitoring relay has an internal power supply and can automatically correct a wrong direction of rotation. Thanks to a special measuring method, a phase failure is reliably detected in spite of the wide voltage range from 160 to 690 V AC and feedback through the load of up to 80%. The device is equipped with a display and is parameterized using three buttons. The 3UG4617 line monitoring relay unit monitors 3-phase networks with regard to phase sequence, phase failure, phase asymmetry, undervoltage and overvoltage. The 3UG4618 monitoring relay monitors the neutral conductor as well. The hysteresis is adjustable from 1 to 20 V. In addition the device has delay times from 0 to 20 s in each case for overvoltage, undervoltage, phase failure and phase asymmetry. The 3UG4617/3UG4618 monitoring relay can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET. The one changeover contact is used for warning or disconnection in the event of power system faults (voltage, asymmetry), the other responds only to a wrong phase sequence. In conjunction with a contactor reversing assembly it is thus possible to change the direction automatically.

With the closed-circuit principle selected

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

#### Voltage monitoring

##### Overview

SIRIUS 3UG4631 monitoring relay

The relays monitor 1-phase AC voltages (rms value) and DC voltages against the set threshold value for overshoot and undershoot. The devices differ with regard to their power supply (internal or external).

##### Benefits

- Versions with wide voltage supply range
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Width 22.5 mm
- Display of actual value and status messages
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

##### Application

- Protection of a plant against destruction due to overvoltage
- Switch-on of a plant at a defined voltage and higher
- Protection from undervoltage due to overloaded supply voltages, particularly with battery power
- Threshold switch for analog signals from 0.1 to 10 V

##### Technical specifications

###### 3UG4631/3UG4632 monitoring relays

The 3UG4631/3UG4632 voltage monitoring relay is supplied with an auxiliary voltage of 24 V AC/DC or 24 to 240 V AC/DC and performs overshoot, undershoot or range monitoring of the voltage depending on parameterization. The device is equipped with a display and is parameterized using three buttons.

The measuring range extends from 0.1 to 60 V or 10 to 600 V AC/DC. The threshold values for overshoot or undershoot can be freely configured within this range. If one of these threshold values is reached, the output relay responds according to the set principle of operation as soon as the delay time has elapsed. This delay time  $U_{Del}$  can be set from 0.1 to 20 s. The hysteresis can be set from 0.1 to 30 V or 0.1 to 300 V. The device can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET. One output changeover contact is available as signaling contact.

###### With the closed-circuit principle selected

###### Overvoltage

###### Undervoltage

###### Range monitoring

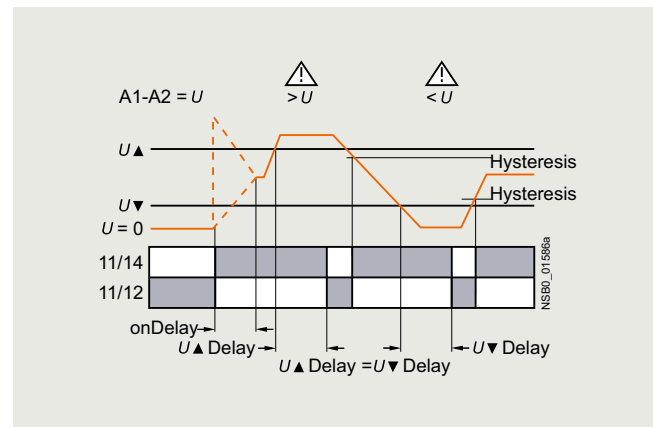

**3UG4633 monitoring relay**

The 3UG4633 voltage monitoring relay has an internal power supply and performs overshoot, undershoot or range monitoring of the voltage depending on parameterization. The device is equipped with a display and is parameterized using three buttons.

The operating and measuring range extends from 17 to 275 V AC/DC. The threshold values for overshoot or undershoot can be freely configured within this range. If one of these threshold values is reached, the output relay responds according to the set principle of operation as soon as the tripping delay time has elapsed. This delay time  $U_{Del}$  can also be adjusted, just like the ON-delay time  $onDel$  from 0.1 to 20 s.

The hysteresis is adjustable from 0.1 to 150 V. The device can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET. One output changeover contact is available as signaling contact.

## Overview

SIRIUS 3UG4622 monitoring relay

The relays monitor 1-phase AC currents (rms value) and DC currents against the set threshold value for overshoot and undershoot. They differ with regard to their measuring ranges and control supply voltage types.

## Benefits

- Versions with wide voltage supply range
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Width 22.5 mm
- Display of actual value and status messages
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

## Application

- Overcurrent and undercurrent monitoring
- Monitoring the functionality of electrical loads
- Open-circuit monitoring
- Threshold switch for analog signals from 4 to 20 mA

## Technical specifications

**3UG4621/3UG4622 monitoring relays**

The 3UG4621 or 3UG4622 current monitoring relay is supplied with an auxiliary voltage of 24 V AC/DC or 24 to 240 V AC/DC and performs overshoot, undershoot or range monitoring of the current depending on parameterization. The device is equipped with a display and is parameterized using three buttons.

The measuring range extends from 3 to 500 mA or 0.05 to 10 A. The rms value of the current is measured. The threshold values for overshoot or undershoot can be freely configured within this range. If one of these threshold values is reached, the output relay responds according to the set principle of operation as soon as the tripping delay time  $I_{Del}$  has elapsed. This time and the ON-delay time  $onDel$  are adjustable from 0.1 to 20 s.

The hysteresis is adjustable from 0.1 to 250 mA or 0.01 to 5 A. The device can be operated with Manual or Auto RESET and on the basis of either the open-circuit or closed-circuit principle. You can decide here whether the output relay is to respond when the supply voltage  $U_S = ON$  is applied, or not until the lower measuring range limit of the measuring current ( $I > 3 \text{ mA}/50 \text{ mA}$ ) is reached. One output changeover contact is available as signaling contact.

With the closed-circuit principle selected upon application of the control supply voltage

## Overview

SIRIUS 3UG4641 monitoring relay

The 3UG4641 power factor and active current monitoring device enables load monitoring of motors.

Whereas power factor (p.f.) monitoring is used above all for monitoring no-load operation, the active current monitoring option can be used to observe and evaluate the load factor over the entire torque range.

## Benefits

- Can be used worldwide thanks to wide voltage range from 90 to 690 V (absolute limit values)
- Monitoring of even small 1-phase motors with a no-load supply current below 0.5 A
- Simple determination of threshold values by directly referencing measured variables to motor loading
- Range monitoring and active current measurement enable detection of cable breaks between control cabinets and motors, as well as phase failures
- Power factor (p.f.) or  $I_{res}$  (active current) can be selected as the measurement principle
- Width 22.5 mm
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

## Application

- No-load monitoring and load shedding, such as in the event of a V-belt tear
- Underload monitoring in the low-end performance range, e.g. in the event of pump no-load operation
- Monitoring of overload, e.g. due to a dirty filter system
- Simple power factor monitoring in power systems for control of compensation equipment
- Broken cable between control cabinet and motor

## Technical specifications

## 3UG4641 monitoring relays

The 3UG4641 monitoring relay is self-powered and serves the 1-phase monitoring of the power factor or performs overshoot, undershoot or range monitoring of the active current depending on how it is parameterized. The load to be monitored is connected upstream of the IN terminal. The load current flows through the terminals IN and Ly/N. The setting range for the power factor is 0.1 to 0.99 and for the active current  $I_{res}$  it is 0.2 to 10 A. If the control supply voltage is switched on and no load current flows, the display will show  $I < 0.2$  and a symbol for overshoot, undershoot or range monitoring. If the motor is now switched on and the current exceeds 0.2 A, the set ON-delay time begins. During this time, if the set limit values are undershot or exceeded, this does not lead to a relay reaction of the changeover contact. If the operational flowing active current and/or the power factor value falls below or exceeds the respective set threshold value, the spike delay begins. When this time has expired, the relay changes its switch position. The relevant measured variables for overshooting and undershooting in the display flash. If monitoring for active current undershoot is switched off ( $I_{res} \nabla = \text{OFF}$ ), and if the load current undershoots the lower measuring range threshold (0.2 A), the CO contacts remain unchanged. If a threshold value is set for the monitoring of active current undershooting, then undershooting of the measuring range threshold (0.2 A) will result in a response of the CO contacts.

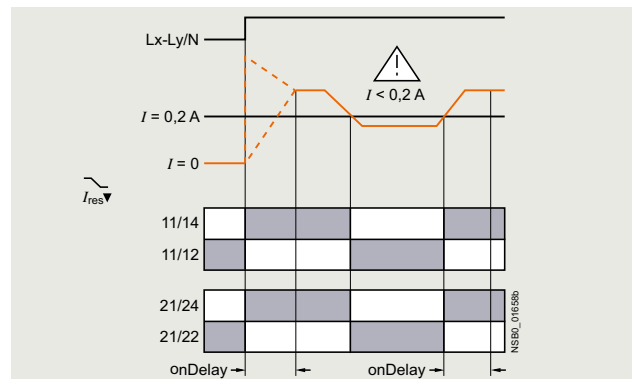

The relay operates either according to the open-circuit or closed-circuit principle. If the device is set to Auto RESET (Memory = No), depending on the set principle of operation, the switching relay returns to its initial state and the flashing ends when the hysteresis threshold is reached.

If Manual RESET is selected in the menu (Memory = Yes), the switching relay remains in its current switching state and the current measured value and the symbol for undershooting and overshooting continue to flash, even when the measured variable reaches a permissible value again. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ keys for 2 seconds, or by switching the supply voltage off and back on again.

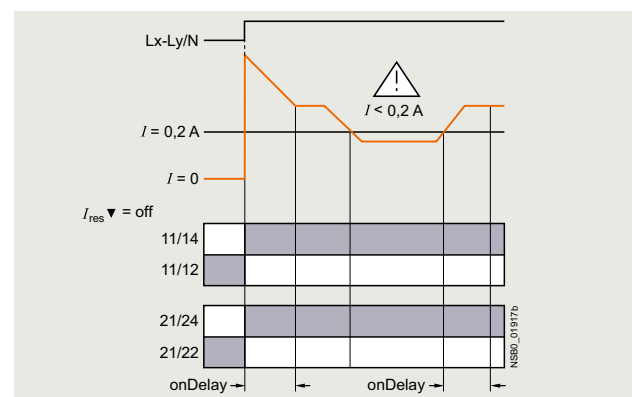

## With the closed-circuit principle selected

Response in the event of undershooting the measuring range limit

- With activated monitoring of  $I_{res} \nabla$

- With deactivated monitoring of active current undershooting

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

##### Residual-current monitoring > Residual-current monitoring relays

### Overview

SIRIUS 3UG4625 monitoring relay

The 3UG4625 residual-current monitoring relays are used in conjunction with the 3UL23 residual-current transformers for monitoring plants in which higher residual currents are increasingly expected due to ambient conditions. Monitoring encompasses pure AC residual currents or AC residual currents with a pulsating DC fault current component (transformer type A in accordance with DIN VDE 0100-530/IEC TR 60755).

### Technical specifications

#### 3UG4625 monitoring relays

The main conductor, and any neutral conductor to which a load is connected, are routed through the opening of the toroidal core of a residual-current transformer. A secondary winding is placed around this toroidal core to which the monitoring relay is connected.

If operation of a plant is fault-free, the sum of the inflowing and outward currents equals zero. No current is then induced in the secondary winding of the residual-current transformer.

However, if an insulation fault occurs, the sum of the inflowing currents is greater than that of the outward currents. The differential current – i.e. the residual current – induces a secondary current in the secondary winding of the transformer. This current is evaluated in the monitoring relay and is used on the one hand to display the actual residual current and on the other, to switch the relay if the set warning or tripping threshold is overshot.

If the measured residual current exceeds the set warning value, the associated changeover contact instantly changes the switching state and an indication appears on the display.

If the measured residual current exceeds the set tripping value, the set delay time begins and the associated relay symbol flashes. On expiry of this time, the associated changeover contact changes the switching state.

#### ON-delay time for motor start

To be able to start a drive when a residual current is detected, the output relays switch to the OK state for an adjustable ON-delay time depending on the selected open-circuit or closed-circuit principle.

The changeover contacts do not react if the set threshold values are overshot during this period.

### Benefits

- Worldwide use thanks to wide voltage range from 24 to 240 V AC/DC
- High measuring accuracy of  $\pm 7.5\%$
- Permanent self-monitoring
- Variable threshold values for warning and disconnection
- Freely configurable delay times and RESET response
- Permanent display of the actual value and fault diagnostics via the display
- High level of flexibility and space saving through installation of the transformer inside or outside the control cabinet
- Width 22.5 mm
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

### Application

Monitoring of plants in which residual currents can occur, e.g. due to dust deposits or moisture, porous cables and leads, or capacitive residual currents.

#### With the closed-circuit principle selected

#### Residual-current monitoring with Auto RESET (Memory = no)

If the device is set to Auto RESET, the relay switches back to the OK state for the tripping value after tripping once the value falls below the set hysteresis threshold and the display stops flashing.

The associated relay changes its switching state if the value falls below the fixed hysteresis value of 5% of the set warning value.

Any overshoots are therefore not stored.

## Residual-current monitoring &gt; Residual-current monitoring relays

## Residual-current monitoring with Manual RESET (Memory = yes)

If Manual RESET is selected in the menu, the output relays remain in their current switching state and the current measured value and the symbol for overshooting continue to flash, even when the measured residual current returns to a permissible value. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ keys for > 2 seconds, or by switching the supply voltage off and back on again.

**Note:**

Do not ground the neutral conductor downstream of the residual-current transformer as otherwise residual current monitoring functions can no longer be ensured.

## Overview

SIRIUS 3UG458 insulation monitor

Insulation monitoring relays are used for monitoring the insulation resistance between ungrounded 1-phase or 3-phase AC supplies and a protective conductor.

Ungrounded, i.e. isolated networks (IT networks) are always used where high demands are placed on the reliability of the power supply, e.g. emergency lighting systems. IT systems are supplied via an isolating transformer or by power supply sources such as batteries or a generator. While an initial insulation fault between a phase conductor and the ground effectively grounds the conductor, as a result no circuit has been closed, so it is possible to continue work in safety (single-fault safety). However, the fault must be rectified as quickly as possible before a second insulation fault occurs (e.g. according to DIN VDE 0100-410). For this purpose insulation monitoring relays are used, which constantly measure the resistance to ground of the phase conductor and the neutral conductor, reporting a fault immediately if insulation resistance falls below the set value so that either a controlled shutdown can be performed or the fault can be rectified without interrupting the power supply.

**Two device series**

- 3UG4581 insulation monitoring relays for ungrounded AC networks
- 3UG4582 and 3UG4583 insulation monitoring relays for ungrounded DC and AC networks

Insulation monitoring for ungrounded AC networks

The 3UG4581 insulation monitoring relays are used to monitor insulation resistance according to IEC 61557-8 in ungrounded AC networks with rated voltages of up to 400 V.

These devices can monitor control circuits (1-phase) and main circuits (3-phase).

They measure insulation resistances between system cables and system ground. If the value falls below the threshold value, the output relays are switched to fault status.

In the case of 3UG4581 a higher-level DC measuring signal is used. The higher-level DC measuring signal and the resulting current are used to determine the value of the insulation resistance of the network which is to be measured.

Insulation monitoring relay for ungrounded DC and AC networks

The 3UG4582 and 3UG4583 insulation monitoring relays are used to monitor insulation resistance in ungrounded IT AC or DC networks according to IEC 61557-8.

They measure insulation resistances between system cables and system ground. If the value falls below the threshold value, the output relays are switched to fault status. With these devices, which are suitable for both AC and DC networks, a pulsed test signal is fed into the network to be monitored and the insulation resistance is determined.

The pulsed test signal changes its form according to insulation resistance and network loss capacitance. The changed form is used to predict the changed insulation resistance.

If the predicted insulation resistance matches the insulation resistance calculated in the next measurement cycle, and is lower than the threshold value, the output relays are activated or deactivated, depending on the device configuration. This measurement principle is also suitable for identifying symmetrical insulation faults.

3UG4983 voltage reducer module

3UG4983 voltage reducer module

The 3UG4983-.AA01 voltage reducer module is available for the 3UG4583 insulation monitoring relay to extend the network voltage range to 690 V AC and 1000 V DC.

**Connection methods**

With the updated enclosure, future-proof push-in technology is available alongside the tried-and-trusted screw terminals.

Push-in is a form of spring-loaded connection system allowing wiring of terminals without tools. These terminals are self-adjusting, i.e. the regular tightening needed with screw terminals is not necessary.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

#### Insulation monitoring

##### Benefits

- Devices for AC and DC systems
- All devices have a wide control supply voltage range
- Direct connection to networks with mains voltages of up to 690 V AC and 1 000 V DC by means of a voltage reducer module
- For AC supply systems: Frequency range 15 to 400 Hz
- Monitoring of broken conductors
- Monitoring of setting errors
- Safety in use thanks to integrated system test after startup
- Option of resetting and testing (by means of button on front or using control contact)
- New predictive measurement principle allows very fast response times
- All versions with screw or spring-loaded terminals with push-in functionality

##### Application

IT networks are used, for example:

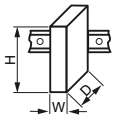

- In emergency power supplies
- In safety lighting systems
- In industrial production facilities with high availability requirements (chemical industry, automobile manufacturing, printing plants)
- In shipping and railways
- For mobile generators (aircraft)
- For renewable energies, such as wind energy and photovoltaic power plants
- In the mining industry

## Overview

SIRIUS 3UG4501 monitoring relay

The 3UG4501 level monitoring relay is used in combination with 2- or 3-pole sensors to monitor the levels of conductive liquids.

## Benefits

- Can be used worldwide thanks to wide voltage range from 24 to 240 V (absolute limit values)
- Individually shortenable 2- and 3-pole wire electrodes for easy mounting from above/below
- Bow electrodes for installation from the side, for larger filling levels and minimum space requirements
- Can be flexibly adapted to different conductive liquids through analog setting of the sensitivity from 2 to 200 k $\Omega$
- Compensation for wave movements through tripping delay times from 0.1 to 10 s
- Upstream or downstream function selectable
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

## Application

- Single-point and two-point level monitoring
- Overflow protection
- Dry-running protection
- Leak monitoring

## Technical specifications

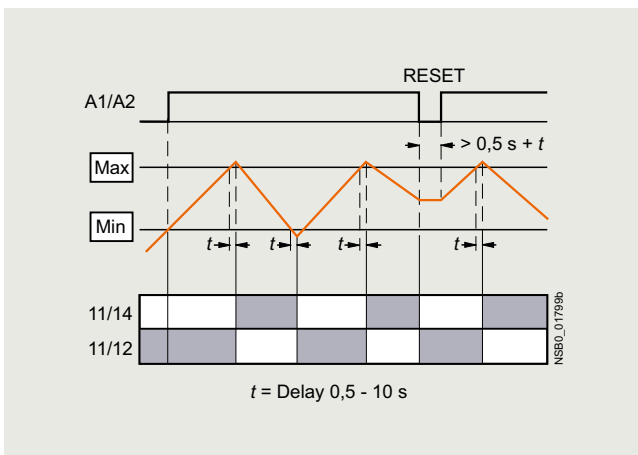

**3UG4501 monitoring relays**

The principle of operation of the 3UG4501 level monitoring relay is based on measuring the electrical resistance of the liquid between two immersion sensors and a reference terminal. If the measured value is lower than the sensitivity set at the front, the output relay changes its switching state. In order to preclude active current undershooting of the liquid, the sensors are supplied with alternating current.

Two-point control

The output relay changes its switching state as soon as the liquid level reaches the maximum sensor, while the minimum sensor is submerged. The relay returns to its original switching state as soon as the minimum sensor no longer has contact with the liquid.

OVER, two-point control

UNDER, two-point control

Note:

It is also possible to connect other resistance sensors to the Min and Max terminals in the range 2 to 200 k $\Omega$ , e.g. photoresistors, temperature sensors, encoders based on resistance, etc. The monitoring relay can therefore also be used for other applications as well as for monitoring the levels of liquids.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

#### Level monitoring

##### Single-point control

If only one level is being controlled, the terminals for Min and Max on the monitoring relay are bridged. The output relay changes its switching state as soon as the liquid level is reached and returns to its original switching state once the sensor no longer has contact with the liquid.

In order to prevent premature tripping of the switching function caused by wave motion or frothing, even though the set level has not been reached, it is possible to delay this function by 0.5 to 10 s.

For safe resetting, the control supply voltage must be interrupted for at least the set delay time of +0.5 s.

##### OVER, single-point control

##### UNDER, single-point control

**Note:**

Level monitoring sensors are available from various providers. We recommend sensors made by Jacob GmbH (see "External partners"). The previous 3UG3 level sensors are also available from here.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG45, 3UG46 monitoring relays for stand-alone installation

### Speed monitoring

#### Overview

SIRIUS 3UG4651 monitoring relay

The 3UG4651 monitoring relay is used in combination with a sensor to monitor motor drives for overspeed and/or underspeed.

Furthermore, the monitoring relay is ideal for all functions where a continuous pulse signal needs to be monitored (e.g. belt travel monitoring, completeness monitoring, passing monitoring, clock-time monitoring).

#### Benefits

- Can be used worldwide thanks to wide voltage range from 24 to 240 V (absolute limit values)
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Permanent display of actual value and fault type
- Use of up to 10 sensors per rotation for extremely slowly rotating motors
- Two- or three-wire sensors and sensors with a mechanical switching output or solid-state output can be connected
- Auxiliary voltage for sensor integrated
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

#### Application

- Slip or tear of a belt drive
- Overload monitoring
- Transport monitoring for completeness

#### Technical specifications

##### 3UG4651 monitoring relays

The speed monitoring relay operates according to the principle of period duration measurement.

In the monitoring relay, the time between two successive rising edges of the pulse encoder is measured and compared to the minimum and/or maximum permissible period duration calculated from the set limit values for the speed.

Thus, the period duration measurement recognizes any deviation in speed after just two pulses, even at very low speeds or in the case of extended pulse gaps.

By using up to ten pulse encoders evenly distributed around the circumference, it is possible to shorten the period duration, and in turn the response time. By taking into account the number of sensors in the monitoring relay, the speed continues to be indicated in rpm.

##### ON-delay time for motor start

To be able to start a motor drive, and depending on whether the open-circuit or closed-circuit principle is selected, the output relay switches to the OK state during the ON-delay time, even if the speed is still below the set value.

The ON-delay time is started by either switching on the auxiliary voltage or, if the auxiliary voltage is already applied, by actuating the respective NC contact (e.g. auxiliary contact).

##### Speed monitoring with Auto RESET (Memory = no)

If the device is set to Auto RESET, the output relay switches to the OK state, once the adjustable hysteresis threshold is reached in the range of 0.1 to 99.9 rpm and the flashing stops. Any overshoots or undershoots are therefore not stored.

##### Speed monitoring with Manual RESET (Memory = yes)

If Manual RESET is selected in the menu, the output relay remains in its current switching state and the current measured value and the symbol for overshooting/undershooting continue to flash, even when the speed returns to a permissible value. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ buttons for > 2 s, by connecting the RESET device terminal to 24 V DC or by switching the control supply voltage off and back on again.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

#### General data

#### Overview

SIRIUS 3UG48 monitoring relays

#### More information

Homepage, see [www.siemens.com/sirius-monitoring-relays](http://www.siemens.com/sirius-monitoring-relays)

Industry Mall, see [www.siemens.com/product?3UG48](http://www.siemens.com/product?3UG48)

Conversion tool, see [www.siemens.com/conversion-tool](http://www.siemens.com/conversion-tool)

The SIRIUS 3UG4 monitoring relays for electronic and mechanical variables monitor all important characteristics that allow conclusions to be drawn about the functionality of a plant. Both sudden disturbances and gradual changes, which may indicate the need for maintenance, are detected.

Thanks to their relay outputs, the monitoring relays permit direct disconnection of the affected system components and alerting, e.g. by the triggering of a warning light. Thanks to adjustable delay times the 3UG4 monitoring relays can respond very flexibly to brief faults such as voltage dips or load changes and can thus avoid unnecessary alarms and disconnections and increase system availability.

#### 3UG48 monitoring relays for IO-Link

The SIRIUS 3UG48 monitoring relays for IO-Link also offer many other options based upon the monitoring functions of the tried-and-tested SIRIUS 3UG4 monitoring relays:

- Measured value transmission to a controller, including resolution and unit, may be parameterizable as to which value is cyclically transmitted
- Transmission of alarm flags to a controller
- Full diagnostics capability by inquiry as to the cause of the fault in the diagnostics data record
- Remote parameterization is also possible, in addition to or instead of local parameterization
- Rapid parameterization of the same devices by duplication of the parameterization in the controller
- Parameter transmission through uploading to a controller by IO-Link call or by parameter server (if IO-Link master from IO-Link specification V1.1 and higher is used)
- Consistent central data storage in the event of parameter change locally or via a controller
- Automatic reparameterizing when devices are exchanged
- Blocking of local parameterization via IO-Link possible
- Faults are saved in parameterizable and non-volatile fashion to prevent an automatic startup after voltage failure and to make sure diagnostics data are not lost

- Integration into the automation level provides the option of parameterizing the monitoring relays at any time via a display unit, or displaying the measured values in a control room or locally at the machine/control cabinet.
- The MindSphere app SIRIUS Asset Monitor enables access to the SIRIUS 3UG48 monitoring relay for IO-Link anytime and anywhere. It provides the user with detailed information on the device status as well as fault messages and warnings in a clearly arranged form.

Even without communication via IO-Link the devices continue to function fully autonomously:

- Parameterization can take place locally at the device, independently of a controller.
- In the event of failure or before the controller becomes available the monitoring relays work as long as the control supply voltage (24 V DC) is present.
- If the monitoring relays are operated without the controller, the 3UG48 monitoring relays have, thanks to the integrated SIO mode, an additional semiconductor output, which switches when the adjustable warning threshold is exceeded.

Thanks to the combination of autonomous monitoring relay function and integrated IO-Link communication, redundant sensors and/or analog signal converters – which previously took over the transmission of measured values to a controller, leading to considerable extra cost and wiring overhead – are no longer needed.

Because the output relays are still present, the monitoring relays increase the functional reliability of the system, since only the controller can fulfill the control tasks if the current measured values are available, whereas the output relays can also be used for the disconnection of the system if limit values that cannot be reached during operation are exceeded.

The individual 3UG48 monitoring relays for IO-Link offer the following functions in different combinations:

- Phase sequence
- Phase failure, neutral conductor failure
- Phase asymmetry
- Undershooting and/or overshooting of limit values for voltage
- Undershooting and/or overshooting of limit values for current
- Undershooting and/or overshooting of power factor limit values
- Monitoring of the active current or the apparent current
- Monitoring of the residual current
- Undershooting and/or overshooting of limit values for speed

#### Notes on security

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see [www.siemens.com/industrialsecurity](http://www.siemens.com/industrialsecurity).

Use of conventional monitoring relays

Notes:

Devices required for communication via IO-Link:

- Any controller that supports IO-Link (e.g. ET 200SP with CPU or S7-1200), see [Catalog ST 70](#).
- IO-Link master (e.g. CM 4xIO-Link for SIMATIC ET 200SP or SM 1278 for S7-1200).

Monitoring relays for IO-Link

Each monitoring relay requires an IO-Link channel.

**Benefits**

- Simple cyclical transmission of the current measured values, relay switching states and events to a controller
- Remote parameterization
- Automatic reparameterizing when devices are exchanged
- Simple duplication of identical or similar parameterizations
- Reduction of control current wiring
- Elimination of testing costs and wiring errors
- Reduction of configuration work
- Integration in TIA means clear diagnostics if a fault occurs
- Cost saving and space saving in control cabinet due to the elimination of AI and IO modules as well as analog signal converters and duplicated sensors

## Monitoring and control devices

### Relays

#### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

#### General data

#### Application

The use of SIRIUS monitoring relays for IO-Link is particularly recommended for machines and plants in which these relays, in addition to their monitoring function, are to be connected to the automation level for the rapid, simple and fault-free provision of the current measured values and/or for remote parameterization.

The monitoring relays can either relieve the controller of monitoring tasks or, as a second monitoring entity in parallel to and independent of the controller, increase the reliability in the process or in the system. In addition, the elimination of AI and IO modules allows the width of the controller to be reduced despite significantly expanded functionality.

## Overview

SIRIUS 3UG4815 monitoring relay

Solid-state line monitoring relays provide maximum protection for mobile machines, plants and hoisting equipment or for unstable networks. Network and voltage faults can thus be detected early and rectified before far greater damage ensues.

The line monitoring relays with IO-Link monitor phase sequence, phase failure (with or without N conductor monitoring), phase asymmetry and undervoltage and/or overvoltage.

Phase asymmetry is evaluated as the difference between the greatest and the smallest phase voltage relative to the greatest phase voltage. Undervoltage or overvoltage exist if the set limit values for at least one phase voltage are overshoot or undershot. The rms value of the voltage is measured.

## Benefits

- Can be used in any network from 160 to 630 V AC worldwide thanks to wide voltage range
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Width 22.5 mm
- Display and transmission of actual value and network fault type to controller
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

## Application

The relays are used above all for mobile equipment, e.g. air conditioning compressors, refrigerating containers, building site compressors and cranes.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

#### Line monitoring

#### Technical specifications

##### 3UG4815/3UG4816 monitoring relays

The 3UG4815 and 3UG4816 line monitoring relays have a wide voltage range input and are supplied with power through IO-Link or from an external 24 V DC source.

The device is equipped with a display and is parameterized using three buttons. The 3UG4815 monitoring relay monitors 3-phase networks with regard to phase sequence, phase failure, phase asymmetry, undervoltage and overvoltage. The 3UG4816 monitoring relay monitors the neutral conductor as well. The hysteresis is adjustable from 1 to 20 V.

The device has two separately adjustable delay times for overvoltage and undervoltage and for line stabilization. If the direction of rotation is incorrect or a phase fails, the device switches off immediately. Thanks to a special measuring method, a phase failure is reliably detected in spite of the wide voltage range from and potentially high feedback through the load.

The 3UG4815 and 3UG4816 monitoring relays can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET.

If Manual RESET is selected in the menu (Memory = Yes), the switching relay remains in its current switching state and the current measured value and the symbol for undershooting and overshooting continue to flash, even when the measured variable reaches a permissible value again. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ keys for 2.5 s.

With Manual RESET through IO-Link it is possible in addition to set whether fault messages are to be deleted when the control supply voltage is switched off and on (as Remote RESET) or whether the signals are to be permanently saved even in a voltage failure, with confirmation possible only through local RESET or via IO-Link.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

### Voltage monitoring

#### Overview

SIRIUS 3UG4832 monitoring relay

The relays monitor 1-phase AC voltages (rms value) and DC voltages against the set limit value for overshoot and undershoot.

#### Benefits

- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Width 22.5 mm
- Display and transmission of actual value and status messages to controller
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

#### Application

- Protection of a plant against destruction due to overvoltage
- Switch-on of a plant at a defined voltage and higher
- Protection from undervoltage due to overloaded supply voltages, particularly with battery power

#### Technical specifications

##### 3UG4832 monitoring relays

The 3UG4832 voltage monitoring relays are supplied with power through IO-Link or with an external auxiliary voltage of 24 V DC and perform overshoot, undershoot or range monitoring of the voltage depending on parameterization. The devices are equipped with a display and are parameterized by means of three buttons or through IO-Link.

The measuring range extends from 10 to 600 V AC/DC. The limit values for overshoot or undershoot can be freely configured within this range. If one of these limit values is reached, the output relay responds according to the set principle of operation as soon as the delay time has elapsed. This tripping delay time  $U\blacktriangle\text{Del}/U\blacktriangledown\text{Del}$  can be set from 0 to 999.9 s, as can the ON-delay time onDel. The hysteresis is adjustable from 0.1 to 300 V.

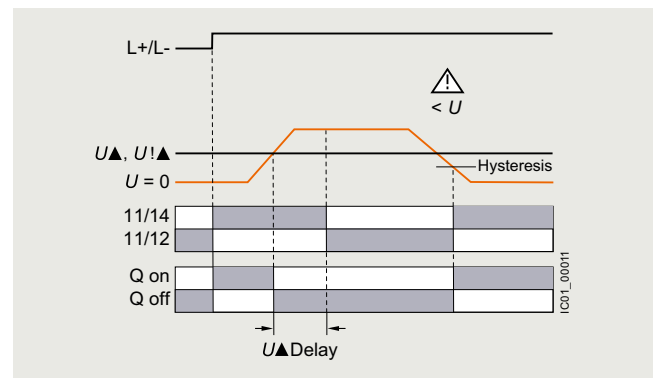

The device can be operated on the basis of either the open-circuit or closed-circuit principle and with Manual or Auto RESET. One output changeover contact is available as a signaling contact, and a semiconductor output is available in addition in SIO mode.

If Manual RESET is selected in the menu (Memory = Yes), the switching relay remains in its current switching state and the current measured value and the symbol for undershooting and overshooting continue to flash, even when the measured variable reaches a permissible value again. This stored fault status can be reset by simultaneously pressing the UP $\blacktriangle$  and DOWN $\blacktriangledown$  keys for 2.5 s.

With Manual RESET through IO-Link it is possible in addition to set whether fault messages are to be deleted when the control supply voltage is switched off and on (as Remote RESET) or whether the signals are to be permanently saved even in a voltage failure, with confirmation possible only through local RESET or via IO-Link.

## Overview

SIRIUS 3UG4822 monitoring relay

The relays monitor 1-phase AC currents (rms value) and DC currents against the set limit value for overshoot and undershoot.

## Benefits

- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Width 22.5 mm
- Display and transmission of actual value and status messages to controller
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

## Application

- Overcurrent and undercurrent monitoring
- Monitoring the functionality of electrical loads
- Monitoring for broken conductors

## Technical specifications

**3UG4822 monitoring relays**

The 3UG4822 current monitoring relays are supplied with power through IO-Link or with an external voltage of 24 V DC and perform overshoot, undershoot or range monitoring of the current depending on the parameterization. The devices are equipped with a display and are parameterized using three buttons.

The measuring range extends from 0.05 to 10 A. For larger AC currents the measuring range can be extended by using commercially available current transformers. Using the adjustable transformer factor, the display of the measured primary currents up to 750 A instead of the secondary currents (max. 1 A or 5 A) is possible.

The rms value of the current is measured. The limit values for overshoot or undershoot can be freely configured within this range. If one of these limit values is reached, the output relay responds according to the set principle of operation as soon as the tripping delay time  $I\blacktriangle\text{Del}/I\blacktriangledown\text{Del}$  has elapsed. This time and the ON-delay time  $\text{onDel}$  are adjustable from 0 to 999.9 s.

The hysteresis is adjustable from 0.01 to 5 A. The device can be operated with Manual or Auto RESET and on the basis of either the open-circuit or closed-circuit principle. You can decide here whether the output relay is to respond when the supply voltage  $U_s = \text{ON}$  is applied, or not until the lower measuring range limit of the measuring current ( $I > 50 \text{ mA}$ ) is reached. One output changeover contact is available as a signaling contact, and a semiconductor output is available in addition in SIO mode.

If Manual RESET is selected in the menu (Memory = Yes), the switching relay remains in its current switching state and the current measured value and the symbol for undershooting and overshooting continue to flash, even when the measured variable reaches a permissible value again. This stored fault status can be reset by simultaneously pressing the UP  $\blacktriangle$  and DOWN  $\blacktriangledown$  keys for 2.5 s.

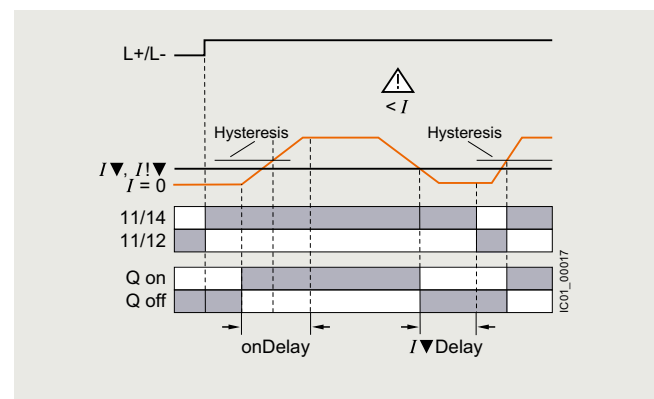

With Manual RESET through IO-Link it is possible in addition to set whether fault messages are to be deleted when the control supply voltage is switched off and on (as Remote RESET) or whether the signals are to be permanently saved even in a voltage failure, with confirmation possible only through local RESET or via IO-Link.

## Monitoring and control devices

### Relays

#### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

#### Power factor and active current monitoring

##### Overview

SIRIUS 3UG4841 monitoring relay

The 3UG4841 power factor and active current monitoring devices enable the load monitoring of motors.

Whereas power factor (p.f.) monitoring is used above all for monitoring no-load operation, the active current monitoring option can be used to observe and evaluate the load factor over the entire torque range.

##### Benefits

- Monitoring of even small 1-phase motors with a no-load supply current below 0.5 A
- Simple determination of threshold values by directly referencing measured variables to motor loading
- Range monitoring and active current measurement enable detection of cable breaks between control cabinets and motors, as well as phase failures
- Power factor (p.f.) and/or  $I_{res}$  (active current) can be selected as the measurement principle
- Width 22.5 mm
- Display and transmission of actual value and status messages to controller
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

##### Application

- No-load monitoring and load shedding, such as in the event of a V-belt tear
- Underload monitoring in the low-end performance range, e.g. in the event of pump no-load operation
- Monitoring of overload, e.g. due to a dirty filter system
- Power factor monitoring in networks for control of compensation equipment
- Broken cable between control cabinet and motor

##### Technical specifications

###### 3UG4841 monitoring relays

3UG4841 monitoring relays are supplied with power through IO-Link or with an external auxiliary voltage of 24 V DC and are used for performing overshoot, undershoot or range monitoring of the power factor and/or the resulting active current, depending on parameterization. The load to be monitored is connected upstream of the IN terminal. The load current flows through the terminals IN and Ly/N. The setting range for the power factor is 0 to 0.99 and for the active current  $I_{res}$  it is 0.2 to 10 A. If the control supply voltage is switched on and no load current flows, the display will show  $I < 0.2$  and a symbol for overshoot, undershoot or range monitoring. If the motor is now switched on and the current exceeds 0.2 A, the set ON-delay time onDel begins. During this time, if the set limit values are undershot or exceeded, this does not lead to a relay reaction of the changeover contact. If the operational flowing active current and/or the p.f. value falls below or exceeds the respective set threshold value, the tripping delay time begins. When this time has expired, the relay changes its switch position. The relevant measured variables for overshooting and undershooting in the display flash. If monitoring for active current undershoot is switched off ( $I_{res} \nabla = \text{OFF}$ ), and if the load current undershoots the lower measuring range threshold (0.2 A), the CO contacts remain unchanged. If a threshold value is set for the monitoring of active current undershooting, then undershooting of the measuring range threshold (0.2 A) will result in a response of the CO contacts.

The relay operates either according to the open-circuit or closed-circuit principle.

If the device is set to Auto RESET (Memory = No), depending on the set principle of operation, the switching relay returns to its initial state and the flashing ends when the hysteresis threshold is reached.

If Manual RESET is selected in the menu (Memory = Yes), the switching relay remains in its current switching state and the current measured value and the symbol for undershooting and overshooting continue to flash, even when the measured variable reaches a permissible value again. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ keys for 2.5 s.

With Manual RESET through IO-Link it is possible in addition to set whether fault messages are to be deleted when the control supply voltage is switched off and on (as Remote RESET) or whether the signals are to be permanently saved even in a voltage failure, with confirmation possible only through local RESET or via IO-Link.

With the closed-circuit principle selected

## Monitoring and control devices

### Relays

#### SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link

#### Residual-current monitoring > Residual-current monitoring relays

#### Overview

SIRIUS 3UG4825 monitoring relay

The 3UG4825 residual-current monitoring relays are used in conjunction with the 3UL23 residual-current transformers for monitoring plants in which higher residual currents are increasingly expected due to ambient conditions. Monitoring encompasses pure AC residual currents or AC residual currents with a pulsating DC fault current component (transformer type A in accordance with DIN VDE 0100-530/IEC TR 60755).

#### Benefits

- High measuring accuracy of  $\pm 7.5\%$
- Permanent self-monitoring
- Parameterization of the devices locally or via IO-Link possible
- Variable threshold values for warning and disconnection
- Freely configurable delay times and RESET response
- Display and transmission of actual value and status messages to controller
- High level of flexibility and space saving through installation of the transformer inside or outside the control cabinet
- Width 22.5 mm
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

#### Application

Monitoring of plants in which residual currents can occur, e.g. due to dust deposits or moisture, porous cables and leads, or capacitive residual currents.

#### Technical specifications

##### 3UG4825 monitoring relays

The main conductor, and any neutral conductor to which a load is connected, are routed through the opening of the toroidal core of a residual-current transformer. A secondary winding is placed around this toroidal core to which the monitoring relay is connected.

If operation of a plant is fault-free, the sum of the inflowing and outward currents equals zero. No current is then induced in the secondary winding of the residual-current transformer.

However, if an insulation fault occurs, the sum of the inflowing currents is greater than that of the outward currents. The differential current – i.e. the residual current – induces a secondary current in the secondary winding of the transformer. This current is evaluated in the monitoring relay and is used on the one hand to display the actual residual current and on the other, to switch the relay if the set warning or tripping threshold is overshot.

If the measured residual current exceeds the set warning value, the associated changeover contact instantly changes the switching state and an indication appears on the display.

If the measured residual current exceeds the set tripping value, the set delay time begins and the associated relay symbol flashes. On expiry of this time, the associated changeover contact changes the switching state.

##### ON-delay time for motor start

To be able to start a drive when a residual current is detected, the output relays switch to the OK state for an adjustable ON-delay time depending on the selected open-circuit or closed-circuit principle.

The changeover contacts do not react if the set threshold values are overshoot during this period.

With the closed-circuit principle selected

Residual-current monitoring with Auto RESET (Memory = no)

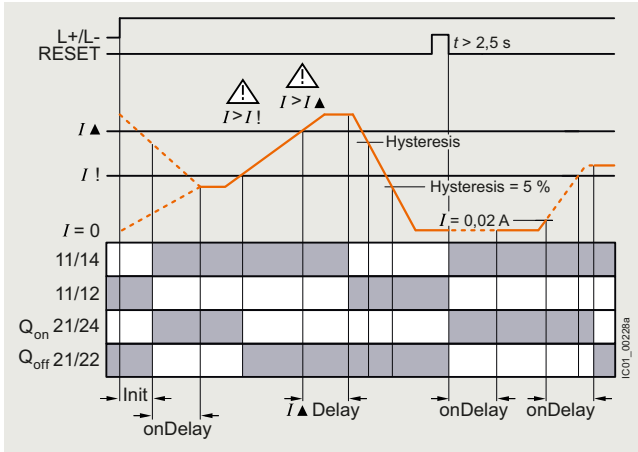

If the device is set to Auto RESET, the relay switches back to the OK state for the tripping value after tripping once the value falls below the set hysteresis threshold and the display stops flashing.

The associated relay changes its switching state if the value falls below the fixed hysteresis value of 5% of the warning value.

Any overshoots are therefore not stored.

## Residual-current monitoring with Manual RESET (Memory = yes)

If Manual RESET is selected in the menu, the output relays remain in their current switching state and the current measured value and the symbol for overshooting continue to flash, even when the measured residual current returns to a permissible value. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ keys for > 2 seconds, or by switching the supply voltage off and back on again.

Note:

The neutral conductor must not be grounded downstream of the summation current transformer as this may impair the function of the residual-current monitoring device.

**Overview**

SIRIUS 3UG4851 monitoring relay

3UG4851 monitoring relays are used in combination with a sensor to monitor drives for overspeed and/or underspeed.

Furthermore, the monitoring relays are ideal for all functions where a continuous pulse signal needs to be monitored (e.g. belt travel monitoring, completeness monitoring, passing monitoring, clock-time monitoring).

**Technical specifications****3UG4851 monitoring relays**

The speed monitoring relay operates according to the principle of period duration measurement.

In the monitoring relay, the time between two successive rising edges of the pulse encoder is measured and compared to the minimum and/or maximum permissible period duration calculated from the set limit values for the speed.

Thus, the period duration measurement recognizes any deviation in speed after just two pulses, even at very low speeds or in the case of extended pulse gaps.

By using up to ten pulse encoders evenly distributed around the circumference, it is possible to shorten the period duration, and in turn the response time. By taking into account the number of sensors in the monitoring relay, the speed continues to be indicated in rpm.

ON-delay time for motor start

To be able to start a motor drive, and depending on whether the open-circuit or closed-circuit principle is selected, the output relay switches to the OK state during the ON-delay time, even if the speed is still below the set value.

The ON-delay time is started by either switching on the auxiliary voltage or, if the auxiliary voltage is already applied, by actuating the respective NC contact (e.g. auxiliary contact).

**Benefits**

- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Display and transmission of actual value and fault type to controller
- Use of up to 10 sensors per rotation for extremely slowly rotating motors
- Two- or three-wire sensors and sensors with a mechanical switching output or solid-state output can be connected
- Auxiliary voltage for sensor integrated
- All versions with removable terminals
- All versions with screw or spring-loaded terminals

**Application**

- Slip or tear of a belt drive
- Overload monitoring
- Transport monitoring for completeness

Speed monitoring with Auto RESET (Memory = no)

If the device is set to Auto RESET, the output relay switches to the OK state, once the adjustable hysteresis threshold is reached in the range of 1 to 99.9 rpm and the flashing stops. Any overshoots or undershoots are therefore not stored.

Speed monitoring with Manual RESET (Memory = yes)

If Manual RESET is selected in the menu, the output relay remains in its current switching state and the current measured value and the symbol for overshooting/undershooting continue to flash, even when the speed returns to a permissible value. This stored fault status can be reset by simultaneously pressing the UP▲ and DOWN▼ buttons for > 2.5 s or by connecting the RESET device terminal to 24 V DC.

With Manual RESET through IO-Link it is possible in addition to set whether fault messages are to be deleted when the control supply voltage is switched off and on (as Remote RESET) or whether the signals are to be permanently saved even in a voltage failure, with confirmation possible only through local RESET, the Remote RESET contact, or via IO-Link.

## Overview

SIRIUS 3RS2 temperature monitoring relays

## More information

Homepage, see [www.siemens.com/sirius-monitoring-relays](http://www.siemens.com/sirius-monitoring-relays)

Industry Mall, see [www.siemens.com/product?3RS2](http://www.siemens.com/product?3RS2)

Conversion tool, see [www.siemens.com/conversion-tool](http://www.siemens.com/conversion-tool)

The 3RS2 temperature monitoring relays can be used to measure temperatures in solid, liquid and gas media. The temperature is acquired by means of sensors in the medium, evaluated by the device and monitored for overshoot, undershoot or location within a specified range (window function).

The family comprises an analog multi-function device which can be set using DIP switches and potentiometers, and digital devices which can be parameterized via an intuitive LC display. The digital device is also available as a version with IO-Link.

All 3RS26 digital devices, including the 3RS28 versions with IO-Link, have safety certification according to IEC 61508/62061 or ISO 13849 up to SIL 1/PL c as well as EN 14597 for heat generating systems and EN 50156 for burners.

Furthermore, the functionality of the 3RS26/3RS28 digital devices can be expanded using a 3RS29 sensor expansion module with two additional resistance sensors, e.g. for monitoring 3-phase motors or transformers.

The 3RS29 sensor expansion module also features an additional relay for outputting the sensor status, and an additional analog input 4 to 20 mA. This analog input allows ATEX applications to be implemented when using an intrinsically safe temperature sensor or other appropriate type of protection. The 3RS29 is connected wirelessly via a SIL 1-certified infrared communication interface.

## Notes:

The SIRIUS 3RS2 temperature monitoring relays fully replace the 3RS1 predecessor. The large number of 3RS1 analog devices can simply be replaced with the new 3RS25 analog multi-function device. The reduced variety of order numbers means the successors can be selected quickly and easily.

The 3RS2 digital devices fully supersede the functionality of the 3RS1 predecessor in a single device type that is now able to use resistance sensors and thermocouples – all at half the width of 22.5 mm instead of 45 mm.

## Analog multi-function devices

SIRIUS 3RS25 analog multi-function device

The analog multi-function device is parameterized using DIP switches and potentiometers. The device can be used to monitor a sensor with a limit value for overshoot or undershoot. The most common temperature ranges with Pt100 resistance sensors or type J or K thermocouples can be used for this purpose. This device can therefore also be used as a compact, easy-to-adjust two-point controller. The relay CO contact output enables loads to be switched directly. The NC contact can optionally be used as a signaling contact.

## Digital devices (1 sensor)

SIRIUS 3RS26 digital device (1 sensor) with 3RS29 sensor expansion module

The SIRIUS 3RS26 digital device with display enables sensors with two limit values to be monitored using all common resistance sensors and thermocouples.

## Monitoring and control devices

### Relays

#### SIRIUS 3RS2 temperature monitoring relays

##### General data

The additional limit value means that, in addition to overshoot and undershoot, an additional warning value can be output to the relay outputs. Alternatively, the second monitoring value can also be used to implement range monitoring. The digital devices can thus also be used as compact two or three-step controllers, with Manual RESET or Remote RESET.

Thanks to safety certification, this device can be used in a wide range of applications.

The functionality of the SIRIUS 3RS26 and 3RS28 digital devices can be expanded wirelessly with the sensor expansion module via a SIL 1-certified infrared communication interface. This combination then features three sensors and is designed for monitoring large 3-phase motors and transformers. It goes without saying that the additional sensors can also be used for other applications.

##### Digital devices (1 sensor) for IO-Link

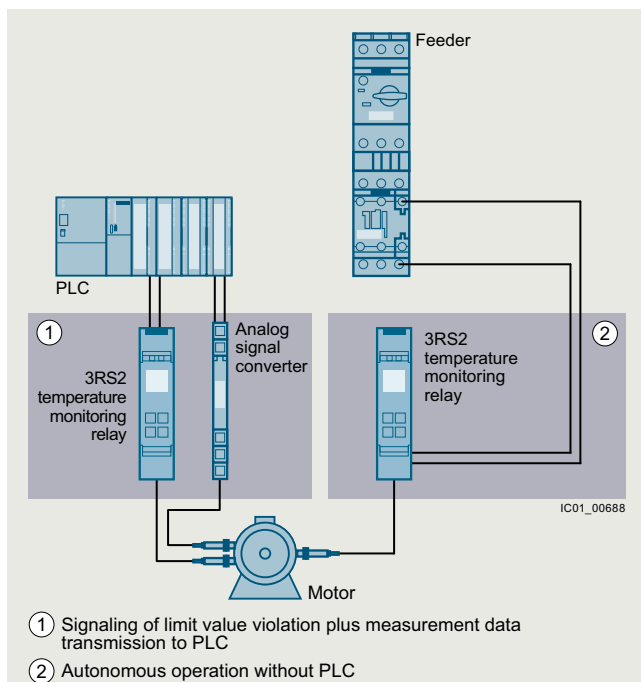

SIRIUS 3RS28 digital device (1 sensor) for IO-Link with 3RS29 sensor expansion module

The 3RS28 digital temperature monitoring relays for IO-Link feature an IO-Link communication interface in addition to a display. They include all functions of the 3RS26 digital device and can also be operated on L+/L- as a stand-alone installation with 24 V DC.

##### Note:

The IO-Link devices can be reset on the display or via IO-Link.

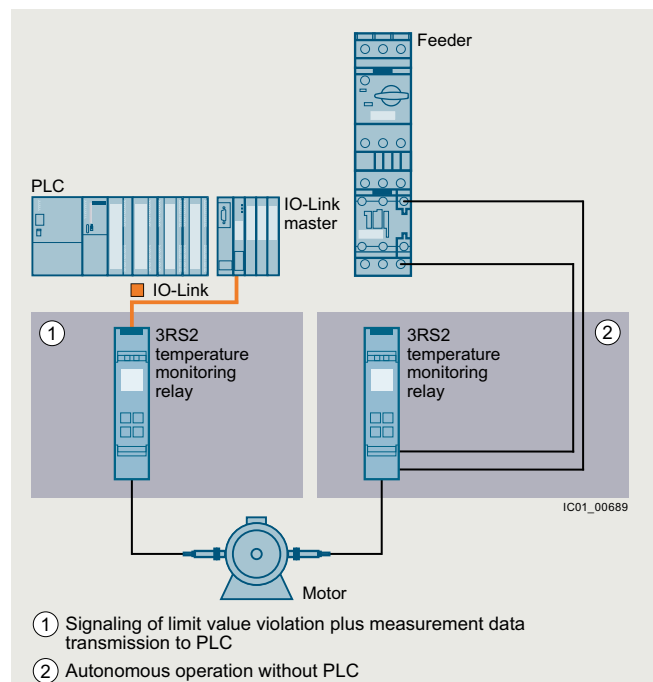

Conventional temperature monitoring relays

##### Notes:

Devices required for communication via IO-Link:

- Any controller that supports IO-Link (e.g. ET 200SP with CPU or S7-1200), see [Catalog ST 70](#).
- IO-Link master (e.g. CM 4xIO-Link for SIMATIC ET 200SP or SM 1278 for S7-1200).

Each monitoring relay requires an IO-Link channel.

Temperature monitoring relays for IO-Link

##### Notes on security

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see [www.siemens.com/industrialsecurity](http://www.siemens.com/industrialsecurity).

**Article No. scheme**

Product versions		Article number	
<b>Temperature monitoring relays</b>		<b>3RS2</b> □ 0 0 - □ □ □ □ 0	
Device type	e.g. 5 = analogically adjustable	□	
Connection type	Screw terminals		1
	Spring-loaded terminals (push-in)		2
Number of CO contacts	e.g. A = 1 CO contact, B = 2 CO contacts	□	
Rated control supply voltage	A = 24 V AC/DC, W = 24 ... 240 V AC/DC		□
Type of rated control supply voltage	3 = AC/DC, 4 = DC		□
Example		<b>3RS2 5 0 0 - 1 A A 3 0</b>	

**Note:**

The Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers. For your orders, please use the article numbers quoted in the selection and ordering data.

**Benefits**

- Customary screw and spring-loaded terminals for quick and reliable wiring
- Reduced space requirement in the control cabinet thanks to a consistent width of 22.5 mm
- Easy parameterization thanks to new display and intuitive operating concept
- Reduced stock keeping and logistics thanks to heavily reduced device variance
- Cost savings thanks to additional scalable functionality with integrated infrared interface
- Communication via IO-Link for 3RS28
- Global applicability and exportability thanks to compliance with international standards and certifications
- Problem-free use in a wide range of applications thanks to Safety bundle with certification according to SIL 1/PL c, ATEX, EN 14597 for heat generating systems and EN 50156 for burners
- All versions with removable terminals
- All versions with screw or spring-loaded terminals with push-in functionality

**Application**

The SIRIUS 3RS2 temperature monitoring relays can be used in almost any application in which temperature overshoot or undershoot is not permitted, e.g. in the monitoring of set temperature limits and the output of alarm messages for:

- Simple and compact two-point control
- Motor and system protection
- Control cabinet temperature monitoring
- Freeze monitoring
- Temperature limits for process variables e.g. in the packaging industry or electroplating
- Controlling equipment and machines such as heating, climate and ventilation systems, solar collectors, heat pumps or warm water supplies
- Motor, bearing and gear oil monitoring
- Monitoring of coolants

**Additionally for digital devices**

- Simple and compact two-point or three-point control
  - Burner acc. to EN 50156
  - Temperature monitors or temperature limiters<sup>1)</sup> according to EN 14597
  - ATEX explosion protection according to EN 50495
- <sup>1)</sup> A 3RS29 sensor expansion module with an additional sensor is required for the function as a temperature limiter.

### Relays

#### SIRIUS 3RS2 temperature monitoring relays

#### General data

#### Technical specifications

##### More information

Technical specifications, see <https://support.industry.siemens.com/cs/ww/en/ps/25719/td>

Equipment Manual and internal circuit diagrams, see <https://support.industry.siemens.com/cs/ww/en/ps/25719/man>

FAQs, see <https://support.industry.siemens.com/cs/ww/en/ps/25719/faq>

#### Connection of resistance-type thermometers

##### Two-wire measurement

When two-wire temperature sensors are used, the resistances of the sensor and wiring are added. The resulting systematic error must be taken into account when the evaluation unit is calibrated. A jumper must be clamped between terminals T2 and T3 for this purpose.

##### Wiring errors

The errors that are generated by the wiring comprise approximately 2.5 K/Ω. If the resistance of the cable is not known and cannot be measured, the wiring errors can also be estimated using the following table.

Temperature drift dependent on the length and cross-section of the cable with Pt100 sensors and an ambient temperature of 20 °C, in K:

Cable length in m	Cross-section mm <sup>2</sup>			
	0.5	0.75	1	1.5
	Temperature drift in K:			
0	0	0	0	0
10	1.8	1.2	0.9	0.6
25	4.5	3.0	2.3	1.5
50	9.0	6.0	4.5	3.0
75	13.6	9.0	6.8	4.5
100	18.1	12.1	9.0	6.0
200	36.3	24.2	18.1	12.1
500	91.6	60.8	45.5	30.2

Example: On a Pt100 sensor with a cable length of 10 m and a conductor cross-section of 1 mm<sup>2</sup> the temperature drift equals 0.9 K.

##### Three-wire measurement

To minimize the effects of the line resistances, a three-wire circuit is often used. Using the additional cable, two measuring circuits can be formed of which one is used as a reference. The evaluation unit can then automatically calculate the line resistance and take it into account.

#### Connection of thermocouples

Based on the thermo-electrical effect, a differential temperature measurement will be performed between the measuring point and the evaluation unit.

This principle assumes that the evaluation unit knows the temperature at the clamping point (T2). For this reason, the 3RS2 temperature monitoring relays have an integral reference point compensation that determines this comparison temperature and builds it into the result of the measurement. The thermal sensors and cables must therefore be insulated.

The absolute temperature is therefore calculated from the ambient temperature of the evaluation unit and the temperature difference measured by the thermocouple.

Temperature detection is therefore possible (T1) without needing to know the precise ambient temperature of the clamping point at the evaluation unit (T2).

The connection cable is only permitted to be extended using compensating lines that are made from the same material as the thermocouple. If a different type of conductor is used, an error will result in the measurement.

For more information, see <https://www.ephy-mess.com/en>

**Principle of operation**

Once the temperature has reached the set threshold value  $\vartheta_1$ , the K1 output relay changes its switching state as soon as the set time  $t$  has elapsed (K2 responds in the same manner to  $\vartheta_2$ ). The delay time can only be adjusted with digital units (on analog units  $t = 0$ ).

When Auto RESET (AUTO RST) is set, the relays return to their original state as soon as the temperature reaches the set hysteresis value.

The memory function (MEMORY) allows the status to be saved even in the event of a voltage failure.

## Position and safety switches

### SIRIUS 3SE5 mechanical position switches

#### General data

#### Overview

##### Design

All enclosure variants have an integrated chlorinated rubber diaphragm for high functional safety in cold and aggressive environments.

##### Enclosure sizes

The 3SE5 switches are available in five different enclosure sizes with 2 or 3 contacts and with the XL enclosure:

- Open-type position switch IP20 or IP10
- Plastic enclosures according to EN 50047, 31 mm wide, IP65, 1 cable entry
- Metal enclosures according to EN 50047, 31 mm wide, IP66/IP67, 1 cable entry
- Plastic and metal enclosures according to EN 50041, 40 mm wide, IP66/IP67, 1 cable entry
- Plastic enclosures, 50 mm wide, IP66/IP67, 2 cable entries
- Metal enclosures, 56 mm wide, IP66/IP67, 3 cable entries
- XL metal enclosures with 4 to 6 contacts, 56 mm wide, IP66/IP67, 3 cable entries

##### Enclosure versions

Various basic switches can be selected for the enclosures of the 3SE5 series:

- With contact blocks with two or three contact elements (screw terminals) designed as slow-action or snap-action contacts; the slow-action contacts also with make-before-break
- Optional LED status display
- With assembled M12 device plug, 4- or 5-pole (available as an accessory for self-assembly for the wide enclosure)
- With 6-pole device plug + PE on the metal enclosures
- Versions with increased corrosion protection
- Versions for operating temperatures down to -40 °C
- AS-Interface version with integrated ASIsafe electronics for all enclosure designs

##### Actuator variants

All actuators can be rotated around the axis in increments of 16 x 22.5°. The following actuator variants are available:

- Plain, rounded and roller plungers
- Roller levers and angular roller levers
- Spring rods
- Twist levers and rod levers with twist actuator
- Fork levers with twist actuator

The actuator rollers are available with various materials and diameters.

Twist actuators for twist levers and rod levers, with setting of switching direction to right, left, or right/left (standard for all twist actuators except fork levers)

##### Cover design

The mechanical position switches have a turquoise cover and the mechanical safety switches have a yellow cover.

Cover colors: position switch turquoise, safety switch yellow

On request the switches can be delivered ex works with a yellow cover. The cover has no effect on the mode of operation. Both versions can be used in safety applications.

##### Diverse contact types

Exchangeable 2-pole and 3-pole contact blocks for all enclosure sizes.

Contact block for position switches, 3 contacts

The 3-pole contact block with snap-action or slow-action contacts is regularly available for all enclosure forms. The same installation space is required as for a 2-pole block. The version with 1 NO + 2 NC offers, for example, more safety through redundant shutdowns (2 NC contacts) with simultaneous signaling (NO contact). The 3-pole blocks are also available with make-before-break and with 2 NO + 1 NC.

##### Contact reliability

The contact blocks ensure an extremely high contact stability. This applies even when the devices are switching low voltages and currents.

##### Positive opening

The NC contacts of the switch are forced open mechanically, positively driven and reliably by the plunger. This is referred to as "positive opening".

##### Optional LED indicators

LED indicators are available for all enclosure sizes except for XL. The enclosures are supplied with an LED signaling indicator (1 x green + 1 x yellow). This is the first time that optical signaling equipment is also available for small standard enclosures according to EN 50047. The LEDs are implemented in 24 V DC and 230 V AC.

### Mounting

Easy plug-in method for fast replacement of the actuator heads

Replacement of the position switch actuator head in only four steps

Video: What makes the SIRIUS position switches so flexible?

### Quick-connect technology

For plastic enclosure with a width of 31 mm

Quick-connect technology for plastic enclosures

These position switches can be wired quickly and easily as an added customer benefit. The connection cable is first connected to the terminals of the contact block and then guided through a slit into the cable gland opening. The time saved through this new connection method is approx. 20 to 25%.

A cable gland with seal must be used with the quick-connect method.

Video: How easy is it to install the 3SE5232 position switch?

For your orders, please use the article numbers quoted in the selection and ordering data.

## Position and safety switches

### SIRIUS 3SE5 mechanical position switches

#### General data

#### Benefits

The 3SE5 position switches differ from the previous series through the following new characteristics:

- The modular design of the product range allows a number of versions with a smaller number of bearing types for enclosures and operating mechanisms.
- All actuators can be turned around the axis in increments of 22.5° (see figure, page 2/318).
- Rounded and roller plungers according to EN 50041 with 3 mm overtravel (total travel 9 mm) for greater tolerance when switching.
- All enclosure sizes – now also including the small enclosure 31-mm wide – are optionally available with an LED signaling indicator (see page 2/318).
- All enclosure variants have an integrated chlorinated rubber diaphragm for high functional safety in cold and aggressive environments.
- All contact blocks are replaceable.
- The 3-pole contact blocks are available for all enclosure sizes (see figure, page 2/318).

- Contact blocks with 1 NO + 2 NC slow-action contacts with make-before-break and 2 NO + 1 NC
- The short-stroke contact block 1 NO + 1 NC improves the precision of the switching operation through a reduced actuation path.
- The contact block with 1 NO + 1 NC snap-action contacts with a contact distance of 2 x 2 mm is suitable for simultaneous shutdown and signaling, particularly in the elevator industry.
- XL metal enclosures for accommodating two 2- or 3-pole contact blocks
- Versions with plugs for safe and fast connection, e.g. to fail-safe field modules of the SIMATIC ET 200eco PN or SIMATIC ET 200AL
- The plastic enclosure with a width of 31 mm has simple and fast wiring equipment which makes it possible to save approx. 20 to 25% of the time when connecting (see figure, page 2/318).
- The ASIsafe electronics are integrated in the enclosure for the versions with AS-Interface connection; an additional adapter is not required.

#### Application

With the standard position switches, mechanical positions of moving machine parts are converted into electrical signals. Through their modular and uniform design and large number of variants, the devices can comply with practically all requirements in industry.

Devices are available with enclosure versions to suit the particular ambient conditions. Different control tasks can be performed with the contact blocks best suited for the particular purpose. And many different actuator variants are available to match the mechanical configuration of the moving machine parts. Dimensions, fixing points and characteristics are largely in accordance with the EN 50041 or EN 50047 standards.

The devices are suitable for use in any climate.

#### Standards

The switches comply with IEC 60947-5-1 (electromechanical control circuit devices).

The protective measure of "total insulation" by the plastic enclosure is ensured by the use of plastic screw glands.

#### Safety position switches

For controls according to IEC 60204-1 the devices can be used as a safety position switch. They comply with ISO 14119. A TÜV Certificate is available. To secure position switches against changes in their position, positively-driven techniques must be employed on installation.

#### Safety circuits

Standards IEC 60947-5-1 require positive opening of the NC contacts. In other words, for the purposes of personal safety, the assured opening of NC contacts is expressly stipulated for the electrical equipment of machines in all safety circuits and marked in accordance with the standard IEC 60947-5-1 with the symbol .

SIL 1 according to IEC 62061/IEC 61508 or PL c according to ISO 13849-1 can be attained with the 3SE5 position switches with  if the corresponding fail-safe evaluation units are selected and correctly installed (e.g. the 3SK safety relays or matching devices from the ASIsafe, SIMATIC or SINUMERIK product ranges).

If a second position switch with  is used, SIL 3 / PL e can be attained.

In addition to positive opening, the operating mechanism (actuators) must also have a positively-driven connection to the enclosure. The corresponding operating mechanisms are marked in the catalog with .

#### Contacts for every application

- **Snap-action contacts:** NC and NO contacts switch simultaneously – regardless of the actuating speed ( $v_{\min} = 0.01$  m/s) and contact erosion.
- **Slow-action contacts:** Difference in travel between "NC contact opens" and "NO contact closes"; the switching speed is the same as or proportional to the actuating speed ( $v_{\min} = 0.4$  m/s).
- **Slow-action contacts with make-before-break:** e.g. suitable for adding a second function to a sequence control.

#### Operating mechanisms for every application

##### Plain, rounded and roller plungers

- Operation in direction of the plunger axis or in case of roller plunger with bar at right angles to the plunger axis.
- The roller plunger is recommended for lateral actuation and relatively long overtravel.

##### Roller levers and angular roller levers

- For actuators made of finely ground steel in the form of cams, bars (approach angle 30°) or cam disks.

##### Spring rods

- Can be used for undefined actuations and changing starting conditions
- Starting from any direction is possible

##### Twist levers and rod levers

- For high starting speeds ( $v = 1.5$  m/s)
- Variety of starting options
- Insensitive to oil, grinding dust, dirt and coarse-grained material
- Adjustment of the lever in increments of 10°
- Can be adjusted with left or right switching

##### Fork levers

- Switchable in two directions
- Latching actuator
- For reciprocating movements

## Position and safety switches

### SIRIUS 3SE5 mechanical position switches

#### General data

#### Monitoring with safe evaluation units from the 3SK series

Safe evaluation units	Maximum achievable safety level according to type of switch				
	Compact	Standard	Hinge	Separate actuator	Tumbler
 <p>3SK</p>	 <p>3SE54</p>	 <p>3SE51/3SE52</p>	 <p>3SE51/3SE52</p>	 <p>3SE51/3SE52</p>	 <p>3SE53</p>
<b>Use of only one position/safety switch</b>	<b>SIL 1 / PL c</b>				
Monitoring with 1 contact: 1 x NC contact	<b>SIL 1 / PL c</b>				
Monitoring with 2 contacts: 2 x NC contact or 1 x NC contact + 1 x NO contact	<b>SIL 1 / PL c</b>		<b>SIL 2 / PL d</b>		
<b>Use of a second position/safety switch</b>	<b>SIL 3 / PL e</b>				
Standard switch	3SE51/3SE52/3SE54				
Safety switch/hinge switch	3SE51/3SE52				
Safety switch with separate actuator	3SE51/3SE52				
Safety switch with tumbler	3SE53				

#### Note:

Taking account of certain fault exclusions (e.g. actuator breakage), use of just one hinge switch or a switch with separate actuator with or without tumbler up to SIL 2 / PL d is possible as described in the table.

Since the machine manufacturer must provide proof of fault exclusion, the component manufacturer is unable to carry out a definitive assessment of the measures taken.

For more information, see <https://support.industry.siemens.com/cs/ww/en/view/35443942>.

The maximum achievable SIL or PL always depends on other assumptions as well. Factors to be taken into account include the DC (declaration), the CCF, and the number of actuations. For information on the safe evaluation units and an introduction to safety systems.

## Position and safety switches

### SIRIUS 3SE5 mechanical position switches

#### General data

#### Options

On the following pages you will find selection tables for complete units as well as components of the modular system.

Complete units

Modular system

The differences between the units are indicated in the selection and ordering data by the symbols shown on orange backgrounds.

Using the modular system you can assemble switch variants which are not available as complete units. Each complete unit can also be supplied as a module.

A basic switch for the modular system comprises an enclosure with a contact block and a cover. Among the basic switches the following versions, for example, can be selected:

- Basic enclosure with rounded plunger
- Version with increased corrosion protection
- Version with M12 device plug and/or with 2 LEDs
- Version with M12 device plug or 6-pole + PE

#### Complete units

##### Ordering example

Required:

- Position switch according to EN 50047 in a plastic enclosure
- Contact block with slow-action contacts 1 NO + 1 NC
- Angular roller lever, metal lever and plastic roller

#### Support functions

The 3SE5/3SF1 position and safety switches can also be ordered using an online configurator.

This also enables a complete documentation to be prepared:

- Product data sheets
- Dimensional drawings
- Operating travel diagrams
- CAD data in 2D and 3D model images
- Ordering data
- Product photos

For the online configurator, see [www.siemens.com/sirius/configurators](http://www.siemens.com/sirius/configurators).

To be ordered:

### Overview

Compact design in width 30 mm

Particularly in harsh environments or on equipment with limited space, the small 3SE54 position switches in compact design with a depth of 16 mm and a weight of only 80 g (without cable) are ideal. Above all the versions with molded cable can be mounted in the most confined spaces.

3SE54 compact position switches are available in two different widths as complete units:

- The 3SE5413 series complies with the EU standard and features a 30-mm-wide enclosure with drilled holes at a spacing of 20 mm.
- The 3SE5423 series meets the requirements of the US market and features a 40-mm-wide enclosure with drilled holes at a spacing of 25 mm.

Both the enclosure and the actuator head are made of metal and comply with the high degree of protection IP67.

The following actuators are available:

- Rounded plungers
- Rounded plungers with central fixing
- Rounded plungers with external seal
- Roller plungers
- Roller plungers with central fixing
- Twist levers
- Twist levers with a smaller mounting depth and lower height
- Twist levers, adjustable length

The contact block is designed with snap-action contacts 1 NO + 1 NC. The NC contact complies with the requirements for positive opening acc. to IEC 60947-5-1.

Connection:

- With molded cable, length 2 m or 5 m
- With M12 device plug and connection cable, M12 socket, 5-pole, with open end, length 5 m

### Safety circuits

Standards IEC 60947-5-1 require positive opening of the NC contacts. In other words, for the purposes of personal safety, the assured opening of NC contacts is expressly stipulated for the electrical equipment of machines in all safety circuits and marked in accordance with the standard IEC 60947-5-1 with the symbol .

SIL 1 according to IEC 62061/IEC 61508 or PL c according to ISO 13849-1 can be attained with the 3SE5 position switches with  if the corresponding fail-safe evaluation units are selected and correctly installed (e.g. the 3SK safety relays or matching devices from the ASIsafe, SIMATIC or SINUMERIK product ranges).

If a second 3SE5 position switch with  is used, SIL 3 / PL e can be attained.

### Benefits

- Very compact yet with the same rating as the 3SE51 standard switches, for notable space savings in confined installation conditions
- Various actuator versions available
- Roller plungers can be rotated 90°
- Twist levers can be rotated 180°; twist lever can be adjusted in 15° increments
- Time is saved when mounting the fully assembled unit
- With metal enclosure of degree of protection IP67, ideal for use in rough industrial environments
- Insensitive to electromagnetic interference

## Position and safety switches

### SIRIUS 3SE5 mechanical position switches

#### 3SE5, open-type design

Enclosure width 30 mm

## Overview

Open-type design

Their compact design makes these switches particularly suitable for use in confined conditions. The mountings and operating points comply with EN 50047.

The switches are equipped with two or three contacts in snap-action, slow-action or slow-action with make-before-break versions. The stroke is 6 mm.

The empty enclosure can be equipped with all contact block versions.

### Improved version

The switches have a robust metal plunger with increased abrasion resistance (instead of the rounded plunger). This enables the switch to be approached from a 30° angle.

## Selection and ordering data

## Position and safety switches

### SIRIUS 3SE5, 3SE2 mechanical safety switches

#### With separate actuator

## General data

### Overview

#### More information

Homepage, see [www.siemens.com/sirius-position-switches](http://www.siemens.com/sirius-position-switches)

Industry Mall, see [www.siemens.com/product?3SE](http://www.siemens.com/product?3SE)

Configurator, see [www.siemens.com/sirius/configurators](http://www.siemens.com/sirius/configurators)

Configuration Manual, see

<https://support.industry.siemens.com/cs/ww/en/view/43920150>

Safety switches with separate actuator are used where the position of doors, covers or protective grilles must be monitored for safety reasons.

3SE5 safety switches with separate actuator have the same enclosures as the 3SE5 position switches (modular system).

3SE5 safety switches with head for separate actuator

#### Design

##### Enclosure sizes

The 3SE5 safety switches are available in four different enclosure sizes:

- Plastic enclosures according to EN 50047, 31 mm wide, IP65, 1 cable entry
- Metal enclosures according to EN 50047, 31 mm wide, IP66/IP67, 1 cable entry
- Plastic and metal enclosures according to EN 50041, 40 mm wide, IP66/IP67, 1 cable entry
- Plastic enclosures, 50 mm wide, IP66/IP67, 2 cable entries
- Metal enclosures, 56 mm wide, IP66/IP67, 3 cable entries

Also available are safety switches in the 3SE2 series which have been developed in this form according to general market requirements:

- Molded-plastic enclosures outside of the standards, enclosure width 52 mm, IP67

##### Enclosure versions

Various basic versions can be selected for the enclosures of the 3SE5 series:

- Available with 2- or 3-pole contact blocks designed as slow-action contacts
- Optional LED status display
- With mounted 4- or 5-pole M12 device plug, also for connection to field modules, such as SIMATIC ET 200 (available for the wide enclosures as an accessory for self-assembly)
- With 6-pole device plug + PE on the metal enclosures
- Similarly with a combination of plug and LED indicators
- AS-Interface version with integrated ASIsafe electronics for all enclosure designs

For a description of the basic switches, see [page 2/318](#).

#### Operation

The actuator head is included in the scope of supply. For actuation from four directions it can be adjusted through  $4 \times 90^\circ$ . The switches can also be approached from above.

The actuator heads of the 3SE2243 and 3SE2257 switches with special enclosures cannot be changed. The switches can be approached from the two broad sides and from above.

The actuator is not included in the scope of supply of the safety switches and must be ordered separately from a choice of different versions to suit the application (see [page 2/335](#)).

The actuator is encoded. Simple overruling by hand or auxiliary devices is impossible.

##### Radius actuators

The safety switches with radius actuators are particularly suitable for rotary protective devices. The movable actuation key allows even small radii to be approached. Damage to the switch and the actuator due to inaccurate approach is prevented.

##### Locking devices

A high-grade steel blocking insert for attaching up to eight padlocks is available for even more security.

Blocking inserts with padlock

##### Dust protection

For use in dusty environments, a protective cap made of rubber is offered that protects the actuator entries of the actuator head from contamination.

##### Contact reliability

The contact blocks ensure an extremely high contact stability. This applies even when the devices are switching low voltages and currents.

##### Positive opening

The NC contacts of the switch are forced open mechanically, positively driven and reliably by the plunger. This is referred to as "positive opening".

## Position and safety switches

### SIRIUS 3SE5, 3SE2 mechanical safety switches

#### With separate actuator

#### General data

#### Benefits

The 3SE5 safety switches with separate actuator differ from the previous series through the following new properties:

- All enclosure sizes with increased corrosion protection are optionally available with an LED signaling indicator.
- The 3-pole contact block 1 NO + 2 NC is available for all enclosure sizes.
- The plastic enclosure has simple and fast wiring equipment which makes it possible to save approx. 20 to 25% of the time when connecting.
- The ASIsafe electronics are integrated in the enclosure for the versions with AS-Interface connection; an additional adapter is not required.

#### Application

Safety switches with separate actuator are used where the position of doors, covers or protective grilles must be monitored for safety reasons.

For more information about the protective door monitoring application, [see flyer](#).

The safety switch can only be operated with the matching coded actuator. Simple overruling by hand or auxiliary devices is impossible.

Devices are available with enclosure versions to suit the particular ambient conditions. The high-grade steel actuator is suitable for extreme ambient conditions down to -40 °C. Different control tasks can be performed with the contact blocks best suited for the particular purpose. Dimensions and fixing points of the enclosure are in accordance with EN 50041 or EN 50047 standards. The devices are suitable for use in any climate.

#### Standards

The switches comply with IEC 60947-5-1 (Electromechanical Control Circuit Devices).

The protective measure of "total insulation" by the plastic enclosure is ensured by the use of plastic screw glands.

#### Safety position switches

For controls according to IEC 60204-1 the devices can be used as a safety position switch. They comply with ISO 14119. A TÜV Certificate is available. To secure position switches against changes in their position, positively-driven techniques must be employed on installation.

#### Safety circuits

Standards IEC 60947-5-1 require positive opening of the NC contacts. In other words, for the purposes of personal safety, the assured opening of NC contacts is expressly stipulated for the electrical equipment of machines in all safety circuits and marked in accordance with the standard IEC 60947-5-1 with the symbol .

SIL 2 according to IEC 62061/IEC 61508 or PL d according to ISO 13849-1 can be attained with a safety switch with a separate actuator with  if the corresponding fail-safe evaluation units are selected and correctly installed (e.g. the 3SK safety relays or matching devices from the ASIsafe, SIMATIC or SINUMERIK product ranges).

If a second 3SE5 safety switch with  is used, SIL 3 / PL e can be attained.

## Position and safety switches

### SIRIUS 3SE5, 3SE2 mechanical safety switches

#### With tumbler

#### General data

#### Overview

The safety switches with tumbler are exceptional safety-related devices which prevent an unforeseen or intentional opening of protective doors, protective grilles or other covers as long as a dangerous situation is present (i.e. follow-on motion of the switched-off machine).

3SE5 safety switch with tumbler

The safety switches with tumbler are comprised of a switch part with electromechanical tumbler and a mechanical actuator which has to be ordered separately.

They are rugged protective devices that enable the greatest possible safety for man and machine.

The safety switches with tumbler are offered in plastic or metal enclosures.

Dimensions (W × H × D): 54 mm × 185 mm × 43.5 mm

#### Operation

The actuator head is included in the scope of supply. For actuation from four directions it can be adjusted through 4 × 90°. The switches can also be approached from above.

The actuator is not included in the scope of supply of the safety switches and must be ordered separately from a choice of different versions to suit the application (see page 2/335).

Actuation data:

- Maximum actuating speed  $v_{\max} = 1.5 \text{ m/s}$
- Minimum actuating speed  $v_{\min} = 0.4 \text{ mm/s}$
- Minimum force in the direction of actuation  $F_{\min} = 30 \text{ N}$

The actuator is encoded. Simple overruling by hand or auxiliary devices is impossible.

#### Radius actuators

The safety switches with radius actuators are particularly suitable for rotary protective devices. The movable actuation key allows even small radii to be approached. Damage to the switch and the actuator due to inaccurate approach is prevented.

#### Locking devices

A high-grade steel blocking insert for attaching up to eight padlocks is available for even more security.

#### Dust protection

For use in dusty environments, a protective cap made of rubber is offered that protects the actuator entries of the actuator head from contamination.

#### Tumbler

There are two versions for interlocking the actuator:

- Spring-actuated lock (closed-circuit principle) with various release mechanisms
- Solenoid-locked (open-circuit principle)

The spring-actuated lock switch is equipped with an auxiliary release for emergency situations or setup mode. Available as options:

- Escape release or
- Emergency release

#### Contact blocks

The safety switches with tumbler have one switching block each for:

- Monitoring the actuator or the position of the protective door
- Monitoring the position of the solenoid

The mechanical design of the switch corresponds to the requirements of the fail-safe principle according to ISO 14119.

#### Optical signaling equipment

The safety switches with tumbler are available with an optional optical signaling device.

The signaling device indicates the switch position of the interlock and the protective device optically by means of two LEDs on the front.

Protective device	Tumbler	Display	Meaning
Closed	Released		Actuator able to be pulled
Closed	Locked		Actuator locked
Open	Released		Actuator pulled

Internal wiring:

- The yellow LED is pre-wired to the solenoid monitoring NO contact.
- The green LED is pre-wired to the actuator monitoring NC contact.
- LED ground is pre-wired to the ground of the solenoid.

#### Notes:

- The operational voltage must be connected to the corresponding contacts by the customer.
- This voltage for the LEDs must match the operational voltage of the solenoid (same potential).

## Position and safety switches

### SIRIUS 3SE5, 3SE2 mechanical safety switches

#### With tumbler

#### General data

#### Benefits

The 3SE53 safety switches provide:

- More safety through higher locking forces:
  - 1 300 N with plastic enclosure
  - 2 600 N with metal enclosure
- Various release mechanisms: lock release, escape release and emergency release
- Two contact blocks each with three contacts as standard equipment, hence fewer versions needed
- Same dimensions for all enclosure versions: plastic, metal or with integrated ASIsafe
- An extensive range of actuators
- An optional LED status display 24 V DC, 115 V or 230 V AC for all switch versions
- Devices with ASIsafe electronics integrated in the enclosure/ wired to 8-pole M12 device plug
- 3SE5322-1S.21-1AG4 series with high degree of protection IP69 (IP69K) in accordance with IEC 60529, cover with foamed seal

#### Application

The safety switches with tumbler are exceptional safety-related devices which prevent an unforeseen or intentional opening of protective doors, protective grilles or other covers as long as a dangerous situation is present (i.e. follow-on motion of the switched-off machine).

The safety switches with tumbler have the following functions:

- Enabling the machine or process with closed and locked protective device
- Locking the machine or process with opened protective device
- Position monitoring of the protective device and tumbler

#### Standards

The switches comply with IEC 60947-1 (Low-Voltage Switchgear and Controlgear, General) and IEC 60947-5-1 (Electromechanical Control Circuit Devices).

The mechanical design of the switch corresponds to the requirements of the fail-safe principle according to ISO 14119.

#### Approvals

The switches are approved for use with locking devices according to ISO 14119 and EN 292, Parts 1 and 2.

These switches are approved according to UL 508, UL 50 and UL 746-C.

#### Safety circuits

Standards IEC 60947-5-1 require positive opening of the NC contacts. In other words, for the purposes of personal safety, the assured opening of NC contacts is expressly stipulated for the electrical equipment of machines in all safety circuits and marked in accordance with the standard IEC 60947-5-1 with the symbol ☞.

SIL 2 according to IEC 62061/IEC 61508 or PL d according to ISO 13849-1 can be attained with a safety switch with a tumbler with ☞ if the corresponding fail-safe evaluation units are selected and correctly installed (e.g. the 3SK safety relays or matching devices from the ASIsafe, SIMATIC or SINUMERIK product ranges).

If a second 3SE5 safety switch with ☞ is used, SIL 3 / PL e can be attained.

#### Tumbler

The separate actuator works like a key using coding and protects against manipulation. It transmits the locking force to the protective device and helps to monitor its position.

There are two versions of locking:

#### Spring-actuated lock (closed-circuit principle)

- In the standard version, the safety switch locks by means of spring force and releases by means of electromagnetic force. In the case of voltage failure, it reliably prevents the protective device from opening when machine parts are still moving.
- The switch is equipped with an auxiliary release for emergency situations or setup mode.
- An auxiliary release which can be secured with a lock to prevent misuse is available as a version.

Auxiliary release

Auxiliary release with lock

The 3SE53 safety switches are also available with an escape release or emergency release.

- Personnel working inside the hazard zone can use the escape release feature to manually release the tumbler without tools from the escape side (hazardous area side) so that they can exit the hazard area. An intentional act (in this case pulling the gray actuator) is required to release the locking mechanism and restore the normal operating state.
- The emergency release enables someone in an emergency situation to manually release the tumbler without tools from the access side (outside the hazardous area). Releasing the lock and restoring the normal operating state must require effort which is comparable to repair activity: in this case disassembly of the red actuator and resetting of the mechanical lock.

Escape release from the front

Emergency release from the back

#### Solenoid-locked (open-circuit principle)

- The second version offers locking by means of electromagnetic force and release by means of spring force. This version has an advantage when it is necessary to quickly access the machine after a power failure occurs, or in the case of very short coasting times.

## Position and safety switches

### SIRIUS 3SE5, 3SE2 mechanical safety hinge switches

General data

#### Overview

3SE5 hinge switches have the same enclosures as the 3SE5 position switches (modular system).

Hinge switches

#### Design

##### Enclosure sizes

The 3SE5 switches are available as complete units in two enclosure sizes:

- Plastic enclosures according to EN 50047, 31 mm wide, IP65, 1 cable entry
- Metal enclosures according to EN 50047, 31 mm wide, IP66/IP67, 1 cable entry
- Plastic and metal enclosures according to EN 50041, 40 mm wide, IP66/IP67, 1 cable entry

##### Enclosure versions

Various basic versions can be selected for the enclosures:

- With 2- or 3-pole contact blocks, designed as snap-action contacts
- AS-Interface version with integrated ASIsafe electronics for all enclosure designs

For a description of the basic switches, [see page 2/318](#).

##### Operating mechanism

The hinge switches are provided for mounting on hinges. The actuator head is included in the scope of supply. There are two versions:

- Operating mechanism with hollow shaft, inner diameter 8 mm, outer diameter 12 mm
- Operating mechanism with solid shaft, diameter 10 mm

#### 3SE2283 hinge switches

The 3SE2283 hinge switches with integrated hinge are available in a special design. They are particularly suitable for use in machine doors and flaps.

#### Benefits

The 3SE5 hinge switches differ from the previous series through the following new characteristics:

- All actuators can be turned around the axis in increments of 22.5° ([see figure, page 2/318](#)).
- The new 3-pole contact block 1 NO + 2 NC is available for all enclosure sizes ([see figure, page 2/318](#)).
- The plastic enclosure with a width of 31 mm has simple and fast wiring equipment which makes it possible to save approx. 20 to 25% of the time when connecting ([see figure, page 2/318](#)).
- The ASIsafe electronics are integrated in the enclosure for the versions with AS-Interface connection; an additional adapter is not required.

#### Application

The hinge switches are used in those areas where the position of swiveling protective devices such as doors or flaps must be monitored. With these switches, the position of the doors and flaps is converted into electric signals. The switches allow shutdown and signaling without delay in the event of a small opening angle through the snap-action contacts with an operating angle of 10°.

Devices are available with enclosure versions to suit the particular ambient conditions. Different control tasks can be performed with the contact blocks best suited for the particular purpose. Dimensions and fixing points of the enclosures are in accordance with EN 50041 or EN 50047 standards.

The devices are suitable for use in any climate.

#### Standards

The switches comply with IEC 60947-5-1 (Electromechanical Control Circuit Devices).

The protective measure of "total insulation" by the plastic enclosure is ensured by the use of plastic screw glands.

#### Safety position switches

For controls according to IEC 60204-1 the devices can be used as a safety position switch. To secure position switches against changes in their position, positively-driven techniques must be employed on installation.

#### Safety circuits

Standards IEC 60947-5-1 require positive opening of the NC contacts. In other words, for the purposes of personal safety, the assured opening of NC contacts is expressly stipulated for the electrical equipment of machines in all safety circuits and marked in accordance with IEC 60947-5-1 with the symbol  $\ominus$ .

SIL 2 according to IEC 62061/IEC 61508 or PL d according to ISO 13849-1 can be attained with a 3SE5 safety hinge switch with  $\ominus$  if the corresponding fail-safe evaluation units are selected and correctly installed (e.g. the 3SK safety relays or matching devices from the ASIsafe, SIMATIC or SINUMERIK product ranges).

If a second 3SE5 position switch with  $\ominus$  is used, SIL 3 / PL e can be attained.

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### General data

#### Overview

2

SIRIUS ACT pushbuttons and indicator lights

#### **SIRIUS ACT – commanding and signaling**

SIRIUS ACT is a modular system of pushbuttons and indicator lights for front plate mounting and rear-mounted electrical modules. Thanks to SIRIUS ACT with PROFINET, pushbuttons and indicator lights can be connected directly via PROFINET to the controller and HMI devices – including with Safety functions. Engineering and commissioning are simplified by the TIA Portal.

#### Extensive portfolio

- Customized variants, e.g. special tumbler arrangements, labeling, equipped enclosures
- Communication-enabled thanks to direct interfacing to AS-Interface, IO-Link or PROFINET

#### Diverse possible applications

- National and international approvals
- Many trade approvals
- Short delivery times thanks to global availability

#### Standards

- IEC 60947-1
- IEC 60947-5-1
- IEC 60947-5-5 for EMERGENCY STOP devices

# Commanding and signaling devices

## SIRIUS ACT pushbuttons and indicator lights

General data

### Configurator

- Fast, simple selection by intuitive navigation through clearly-organized menus using drag & drop
- Image preview of selected components
- Inscription of pushbuttons and labeling plates using the interactive inscription tool
- Once created, a configuration can be ordered as often as required using the customer-specific article number and the CIN (Configuration Identification Number)
- Everything at a glance: Product data sheets, certificates, dimensional drawings, list prices, inscription tool

Video: SIRIUS ACT - Configurator

2

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### General data

#### Benefits

##### Design

Video: SIRIUS ACT - Design

SIRIUS ACT is available in three design lines.

##### Ruggedness

Video: SIRIUS ACT - Ruggedness

- Degree of protection IP66, IP67, IP69 (IP69K)

##### IP66

6 = Protection against the ingress of dust

6 = Protection against powerful splashwater

##### IP67

6 = Protection against the ingress of dust

7 = Protection against temporary immersion

##### IP69 (IP69K)

6 = Protection against the ingress of dust

9 (9K) = Protection against water in high-pressure cleaning (approx. 80 bar) and high water jet temperatures (approx. 80 °C)

- Service life of 100 000 hours thanks to use of LEDs
- Media resistance (chemicals) thanks to solid stainless steel and high-grade plastics
- Mechanical service life of  $10 \times 10^6$  operating cycles
- Suitable for use in extreme environments
- Reliable, friction-locked fixing with just one screw
- Design stability according to use
- Simple geometry for mounting holes

##### Communication

- Direct connection of the enclosure to AS-Interface or IO-Link
- Direct connection in the control cabinet to PROFINET, IO-Link or AS-Interface
- Can be integrated easily via the TIA Portal

##### Simple installation

Video: SIRIUS ACT - Installation

- Self-holding function of the actuator when mounting
- Twist prevention integrated into patented holder design
- Stackable contact modules
- Self-explanatory and fast installation using one hand
- Components can be mounted with holder removed
- No special tools required, simple size 2 screwdriver (cross-tip ISO 87641PZD1, flat-head ISO 2380-1 A/B 1x4.5) is sufficient

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

General data

#### Mounting dimensions

	Minimum clearance		
	a	b	c
	mm	mm	mm
<b>22 mm, plastic, black</b> <b>22 mm, metal, shiny</b> <b>For front plate thickness 1 ... 6 mm</b>			
3-slot holder	30	40	22.3 <sup>+0.4</sup>
4-slot holder	40	40	22.3 <sup>+0.4</sup>
<b>30 mm, metal, matte</b> <b>For front plate thickness 1 ... 4 mm</b>			
3-slot holder	40	45	30.5 <sup>+0.5</sup>

#### Versions

SIRIUS ACT is a modular system of pushbuttons and indicator lights with which customized variants can be configured flexibly.

One command point comprises:

- An actuating or signaling element in front of the control panel
- A holder for securing behind the control panel
- Up to six contact modules and/or one LED module (mounted on the holder), 1-pole contacts can be stacked
- A comprehensive range of accessories for inscription/markings

#### Complete units

Complete units made up of an actuating or signaling element, holder and contact modules and/or LED modules are offered for the most frequent application cases. The electrical parts are integrated and only have to be wired.

#### Compact units

Signaling devices, sensor switches, pushbuttons with extended stroke and potentiometers are available as compact units. The electronic circuitry is already integrated in these devices, i.e. it is not necessary to snap on a contact or LED module.

- 1 Actuator
- 2 Holder
- 3 LED module
- 4 NO contact

- 1 Acoustic signaling device
- 2 Holder

#### Complete units<sup>1)</sup>

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### General data

#### ID key-operated switches

Groups of employees or individuals can be authenticated by means of the ID key-operated switch. The ID key-operated switch is electronic and has four switch positions that are selected by keys with different codes. Using the four ID keys with different codes, it is possible to select 1 to 4 positions. The ID keys are color-coded (yellow, blue, red, green, white) so that they can be clearly differentiated at a glance and used flexibly thanks to four function levels.

Video: SIRIUS ACT ID key-operated switches

#### RFID authentication solutions

Groups of employees or individuals can be authenticated by means of the ID key-operated switch. Color-coded keys for easy distinction between users.

Different versions of ID key-operated switches are available depending on the following features:

- Front ring material
- Conventional variant: 1 + 4 non-isolated outputs
- Variant with IO-Link: Option of individual coding

#### Operation:

Insert ID key, turn key to select the position. Standard keys can also be used in conjunction with the electronic module for ID key-operated switches with IO-Link function. The white ID key is supplied without coding.

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### General data

##### Ordering notes for multi-unit packaging

SIRIUS ACT pushbuttons and indicator lights can also be ordered in various types of practical, environment-friendly multi-unit packaging.

##### Multi-unit packaging with order code X90

When ordering products in multi-unit packaging, the Article No. of the product concerned must be supplemented with **"-Z"** and, in addition, the order code **X90** must be specified.

Ordering example:  
3SU1000-OAB20-0AA0-Z X90;  
pack of 100

Examples of multi-unit packaging with order code X90

SIRIUS ACT pushbuttons and indicator lights	Multi-unit, quantity per package X90
Complete units (3SU11)	20
Compact units (3SU12)	
• Acoustic signaling devices, pushbuttons with extended stroke, potentiometers	50
Actuating and signaling elements (3SU10)	
• Pushbuttons, illuminated pushbuttons, indicator lights	100
• Stop switches, twin pushbuttons, mushroom pushbuttons 30/40 mm, EMERGENCY STOP mushroom pushbuttons 30/40 mm, toggle switches, selector switches, key-operated switches, ID key-operated switches, coordinate switches	50
• Mushroom pushbuttons 60 mm, EMERGENCY STOP mushroom pushbuttons 60 mm	40
Holders without module (3SU15)	100
Modules for actuators and indicators (3SU14)	
• Contact modules	150
• LED modules	50
Enclosures (3SU18)	
• Empty plastic enclosures	
- 3SU1801-0AA00-0AA2, 3SU1801-0AA00-0AB1	24
- 3SU1801-0AA00-0AC2	18
Accessories (3SU19)	
• Sealing plugs, label holders, EMERGENCY STOP backing plates, labeling plates for potentiometers, EMERGENCY STOP labeling plates for enclosures without recesses and without inscription, single frames, dust caps for key-operated switches, adapters for mounting on standard rails, protective collars for EMERGENCY STOP mushroom pushbuttons (40 mm, for 5 padlocks, yellow)	100
• Labeling plates	150

##### Multi-unit packaging with order code X05

When ordering products in multi-unit packaging, the Article No. of the product concerned must be supplemented with **"-Z"** and, in addition, the order code **X05** must be specified.

Ordering example:  
3SU1500-OAA10-0AA0-Z X05;  
pack of 5

Examples of multi-unit packaging with order code X05

SIRIUS ACT pushbuttons and indicator lights	Multi-unit, quantity per package X05
Holders without module (3SU15)	
• Plastic: 3SU1500-OAA10-0AA0	5
• Metal: 3SU1510-OAA10-0AA0	5
• Universal for plastic and metal: 3SU1550-OAA10-0AA0	5
Modules for actuators and indicators (3SU14)	
• Contact modules for front plate mounting	5
- Screw terminals: 3SU1400-1AA10-1BA0, 3SU1400-1AA10-1CA0	
- Spring-loaded terminals: 3SU1400-1AA10-3BA0, 3SU1400-1AA10-3CA0	
• LED modules for front plate mounting	5
- Screw terminals: 3SU1401-1BB00-1AA0, 3SU1401-1BB20-1AA0, 3SU1401-1BB30-1AA0, 3SU1401-1BB40-1AA0, 3SU1401-1BB50-1AA0, 3SU1401-1BB60-1AA0	
- Spring-loaded terminals: 3SU1401-1BB00-3AA0, 3SU1401-1BB20-3AA0, 3SU1401-1BB30-3AA0, 3SU1401-1BB40-3AA0, 3SU1401-1BB50-3AA0, 3SU1401-1BB60-3AA0	
• LED modules for floor mounting	5
- Screw terminals: 3SU1401-2BB00-1AA0, 3SU1401-2BB20-1AA0, 3SU1401-2BB30-1AA0, 3SU1401-2BB40-1AA0, 3SU1401-2BB50-1AA0, 3SU1401-2BB60-1AA0	
- Spring-loaded terminals: 3SU1401-2BB00-3AA0, 3SU1401-2BB20-3AA0, 3SU1401-2BB30-3AA0, 3SU1401-2BB40-3AA0, 3SU1401-2BB50-3AA0, 3SU1401-2BB60-3AA0	

### Application

#### Environmental conditions

The pushbuttons and indicator lights are climate-proof (KTW 24) and suitable for standard industrial applications and operation in marine applications.

#### Simple electrical equipment

Non-illuminated actuators, contact modules, enclosures and special accessories can be classified as simple electrical equipment according to IEC 60079-11. This means that they may be used in intrinsically safe circuits in potentially explosive atmospheres. An overview of the devices and atmospheres can be found in Confirmation No. 3287.01.

#### Safety EMERGENCY STOP pushbuttons according to ISO 13850

For controls according to IEC 60204-1, the SIRIUS ACT mushroom pushbuttons are suitable for use as safety EMERGENCY STOP pushbuttons.

#### Safety circuits

Standard IEC 60947-5-1 requires positive opening. This means that for the purpose of personal safety, the reliable opening of NC contacts in all safety circuits is expressly prescribed for the electrical equipment of machines and is designated according to IEC 60947-5-1 with the symbol (⊖).

PL e according to ISO 13849-1 can be attained with the EMERGENCY STOP mushroom pushbuttons if the corresponding fail-safe evaluation units are selected and correctly installed, e.g. the 3SK safety relays or matching units from the ASIsafe, SIMATIC or SINUMERIK product ranges.

## Options

### Special locks for key-operated switches

The plastic and metal key-operated switches of type RONIS, BKS and Siemens (compatible with CES) can be optionally ordered with additional locks.

In this case **"-Z"**, the order code **"Y01"** and the required lock number must be added to the article number of the relevant key-operated switch for standard locking.

Order code	Y01
Standard delivery time	25 working days
Additional price per unit	
Ordering example	3SU1000-5BF01-0AA0-Z Y01 Z = SSG18

### Ordering notes

- For all special locks, an additional price applies.
- The order code **"Y01"** must be quoted in accordance with the above table. Automated processing of the order with a defined delivery time can be guaranteed only for correctly submitted orders.
- For applications in which access security is important and several lock numbers are used, we recommend the use of BKS or Siemens key-operated switches.
- Special locks for VW (E1, E2, ...) will be delivered without keys, all others with two keys.
- Available special locks
  - Siemens lock (compatible with CES locks): SSG1 to SSG100; SMS1 to SMS100; LSG1; BAZ1, BAZ6, BAZ8, BAZ11, BAZ20, BAZ27, BAZ30, BAZ34; VL1, VL5; TAB501; STGH10; SSP9
  - BKS lock: S1 to S99; E1 to E25 (VW – without key); G3751 (VW – without key)
  - RONIS lock: SB30, SB31, 421, 455
  - OMR lock: 73038, 73037, 73034, 73033
  - For key-operated switches with key monitoring and Siemens lock, locks SSG1 to SSG100 are possible.
  - With the Siemens locks VL1 and VL5, key removal is possible in the O, I, II, O+I and O+II positions.

### Note:

Mixing of the special locks listed above from different key-operated switch brands is not possible.

### Example:

A RONIS key-operated switch cannot be combined with an SSG10 lock.

### Master and master-pass key systems

The following key systems can be supplied with BKS or Siemens locks:

- Central lock systems
- Master key systems
- Central master key systems
- Master-pass key systems

When placing an order you must supplement the article number of the matching key-operated switches with **"-Z"** and quote the order code **"Y03"**.

Price and delivery time on request.

Email: [sirius-attach.aud@siemens.com](mailto:sirius-attach.aud@siemens.com)

Example of master-pass key system

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Actuators and indicators, customized designs

#### Laser inscriptions

#### Options

##### Inscription of actuating and signaling elements

Actuating and signaling elements in both plastic and metal version can be optionally inscribed with a laser.

Example of laser inscription

The actuators of the pushbuttons, illuminated pushbuttons, twin pushbuttons, mushroom pushbuttons, illuminated mushroom pushbuttons, EMERGENCY STOP mushroom pushbuttons (without lock), the lenses of the indicator lights, and the acoustic signaling devices can all be inscribed.

##### Version

The default typeface used for inscriptions with text is Arial and the text is centered.

The font size for illuminated actuators is 2.5 mm, for non-illuminated actuators 3 mm.

Up to 8 characters per line are possible.

##### Notes:

Selected pushbuttons and twin pushbuttons can be supplied as standard with inscribed letters or symbols.

Selector switches, key-operated switches and toggle switches can only be inscribed on the front ring in the design lines

- 22 mm, plastic, black and
- Flat, 30 mm, metal matte

(only one text line and the supplement Y19).

##### Assignment of the positions on the actuator

Front ring and twin pushbutton

##### Ordering notes

To order, the inscribed actuating and signaling elements can be selected via the SIRIUS ACT configurator. An electronic order form is then generated. For configurator, see [www.siemens.com/sirius-act/configurator](http://www.siemens.com/sirius-act/configurator)

When ordering, add "-Z" and one of the following codes to the article number of the actuator element or the indicator light:

- **Y10:** Text in upper/lower case, always upper case for beginning of line, e.g. Z1=Lift Z2=Lower
- **Y11:** Text in upper case, e.g. Z1=LIFT Z2=LOWER
- **Y12:** Text in lower case, e.g. Z1=lift off Z2=lower off
- **Y15:** Text in upper/lower case, all words begin with upper case letters, e.g. Z1=Lift Off Z2=Lower Off
- **Y13:** Symbol with number according to ISO 7000 or IEC 60417
- **Y19:** Inscription of choice, text or symbol, can only be ordered via SIRIUS ACT configurator with a Configuration Identification Number (CIN)

When ordering, specify the required inscription without spaces after Z=, Z1=, etc., in addition to the article number and order code (see ordering examples 1 to 3).

In the case of symbols, specify the symbol No. and the standard (see ordering example 2)

In the case of multi-line inscriptions, the text must be assigned to the respective line, e.g. Z1=Lift, Z2=Lower. (see ordering examples 1 and 3)

The SIRIUS ACT configurator must be used to select special inscriptions and symbols (see ordering example 4). In this case a CIN (Configuration Identification Number) is generated for placement of future orders. It is then possible to place an order directly via the SIRIUS ACT configurator using the CIN (shopping cart in the Industry Mall) or via the standard ordering channels.

Standard ordering:

- Configurator: [www.siemens.com/sirius-act/configurator](http://www.siemens.com/sirius-act/configurator)
- Industry Mall: [www.siemens.com/industrymall](http://www.siemens.com/industrymall)

##### Ordering example 1

A round pushbutton with 2 lines of text is required:

**3SU1000-0AB20-0AA0-Z**  
**Y10**

Z1=Lift  
Z2=Lower

##### Ordering example 2

A pushbutton inscribed with symbol No. 5389 according to IEC 60417 is required:

**3SU1000-0AB20-0AA0-Z**  
**Y13**

Z=5389 IEC

##### Ordering example 3

A selector switch with 2 switch positions and multi-line inscription on the front ring is required:

**3SU1002-2BF10-0AA0-Z**  
**Y11**

Z8=0  
Z2=I

##### Ordering example 4

An indicator light with customized inscription is required:

**3SU1001-6AA50-0AA0-Z**  
**Y19**

CIN.....

(20-digit number generated from the SIRIUS ACT configurator)

#### Overview

- Plastic holders are attached to actuators and indicators made of plastic (3SU100).
- Metal holders can be attached to all versions of actuators and indicators, with the exception of ID key-operated switches.
- Universal holders can be attached to actuators and indicators made of plastic or metal.
- All metal and universal holders are automatically grounded by their fastening screw. A grounding stud can also be fitted (see page 2/426).

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Modules

#### Contact modules

#### Overview

The contact modules are fitted with slow-action contacts (NO contacts or NC contacts). These ensure a high level of contact reliability even with small voltages and currents, such as 5 V/1 mA. They are suitable for use in electronic systems as well as conventional controls. The contact pieces of the NC contacts are positively driven.

#### Mounting system

- Front plate mounting:  
The contact modules are mounted on the rear face of a holder.
- Floor mounting:  
The contact modules are used in the 3SU18 enclosures and are snapped into the lower part of the enclosure.

#### Connection methods

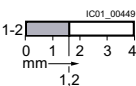

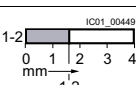

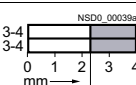

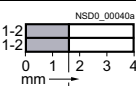

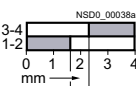

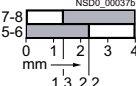

The contact modules are available with:

- Screw terminals
- Spring-loaded terminals
- Socket connection (THT) for PCB mounting

The terminal designations of the contact modules comply with EN 50013.

#### Selection and ordering data

Multi-unit packaging, see page 2/360.

	Contact version	Number of				Spring-loaded terminals	Weight
		NO contacts	NC contacts				
						Article No.	kg

		1 leading	1 lagging			<b>3SU1400-1AA10-3GA0</b>	0.016

⊖ Positive opening according to IEC 60947-5-1, Annex K. Can be used with 3SK safety relays. Certificate:

<sup>1)</sup> The contact module has 1 NO internal contact + 1 NC internal contact. The NO contact is connected in series with the NC contact and brought out at terminal 1-2. When the module is snapped onto the holder, the NO contact closes. It opens when the module is detached from the holder again (the NC contact remains closed). The NC contact opens when the EMERGENCY STOP device is actuated (the NO contact remains closed). The contact is closed only when both the NC and NO contacts are closed. Only suitable for installation in 3SU18 enclosure with one command point and in connection with the adapter 3SU1900-0JF10-0AA0.

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Modules

#### LED modules

### Overview

#### LED modules

The commanding and signaling devices can be illuminated via LED modules with integrated LEDs.

#### Mounting system

- Front plate mounting:  
The LED modules are mounted on the rear face of a holder in the center position.
- Floor mounting:  
The LED modules are used in the 3SU18 enclosures and are snapped into the lower part of enclosure.

#### Connection methods

The LED modules are available with:

- Screw terminals
- Spring-loaded terminals
- Socket connection (THT) for PCB mounting

The terminal designations of the LED modules comply with EN 50013.

#### LED test modules

The LED test modules are used to test the LED modules (AC/DC versions). One LED module is connected to each test module for testing, [see page 2/391](#).

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Enclosures

#### General data

#### Overview

#### Pushbuttons and indicator lights in the enclosure

Enclosures with standard fittings

Enclosed SIRIUS ACT pushbuttons and indicator lights are used as hand-operated command devices for separately allocated control units and cabinets. The devices are suitable for use in any climate and all have degree of protection IP66, IP67, IP69 (IP69K), including those with cable glands.

#### Standards

IEC 60947-5-1

#### Versions

The enclosed pushbuttons and indicator lights are available with conventional controls as well as for connection to AS-Interface. The following versions are available:

- Empty enclosures with 1 to 6 command points. The installed components must be ordered separately; modules for floor mounting or 1-pole contact and LED modules for front plate mounting can be used, [see page 2/386 onwards](#).
- Enclosures with standard fittings with 1 to 3 command points, e.g. EMERGENCY STOP enclosure with EMERGENCY STOP mushroom pushbutton
- Enclosures with customized fittings with 1 to 6 command points
- Special enclosure for selector switches (4 switch positions), coordinate switches, ID key-operated switches and sensor switches

#### Color of the enclosures

Top:

- Gray, RAL 7035
- Pantone yellow C, for EMERGENCY STOP

Lower part:

- Black, RAL 9005

Setup of the pushbuttons and indicator lights in the enclosure

#### Customized enclosures

The fittings and labeling of the command points can be chosen using the configurator on the internet. The prices depend on the equipment selected, [see \[www.siemens.com/sirius-act/configurator\]\(http://www.siemens.com/sirius-act/configurator\)](#).

It is also possible to create a combination of two enclosures using connectors.

#### Application

The enclosures are climate-proof (KTW 24) according to EN ISO 6270-2 and are suitable for stationary use, and for use in marine applications.

### SIRIUS ACT pushbuttons and indicator lights

#### Accessories

#### Labels > Insert labels

#### Overview

Labels can be inserted for identification purposes for the 22 mm and 30 mm design lines of the pushbuttons (clear) and illuminated pushbuttons with flat button. These insert labels are made of transparent plastic with black inscription; they can be fitted in any 90° angle.

#### Inscription

The inscription is in upper/lower case, all words begin with upper case letters. Graphic symbols, including those not listed in the catalog, are according to ISO 7000 or IEC 60417.

The insert labels without inscription are suitable for user marking with permanent pen.

For customized inscriptions, see "Options", page 2/396.

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Accessories

#### Labels > Insert labels

#### Options

##### Customized inscriptions

The labels can be inscribed with text and symbols not listed in the ordering data.

The default typeface used for inscriptions with text is Arial and the text is centered.

The font height is 2.5 mm.

Up to 6 characters per line are possible.

##### Examples of customized inscriptions

Two-line inscription in upper/lower case (Q0Y)

Single-line inscription in upper case (Q1Y)

Three-line inscription in lower case (Q2Y)

Symbol number 5011 according to IEC 60417 (Q3Y)

Any symbol according to order form supplement (Q9Y)

##### Ordering notes

Append the following order codes to the article number:

- **Q0Y:** Text line(s) in upper/lower case, always upper case for beginning of line, e.g. Z1=Lift Z2=Lower
- **Q1Y:** Text line(s) in upper case, e.g. Z1=LIFT Z2=LOWER
- **Q2Y:** Text line(s) in lower case, e.g. Z1=lift off Z2=lower off
- **Q5Y:** Text line(s) in upper/lower case, all words begin with upper case letters, e.g. Z1=Lift Off Z2=Lower Off
- **Q3Y:** Symbol with number according to ISO 7000 or IEC 60417
- **Q9Y:** Inscription of choice, text or symbol, can only be ordered via SIRIUS ACT configurator with a Configuration Identification Number (CIN)

When ordering, specify the required inscription without spaces after Z=, Z1=, etc., in addition to the article number and order code (see ordering examples 1 to 3).

In the case of multi-line inscriptions, the text must be assigned to the respective line,

e.g. Z1=LIFT Z2=LOWER (see ordering example 1).

Symbols can also be ordered with numbers according to ISO 7000 or IEC 60417 (see ordering examples 2 and 3).

The SIRIUS ACT configurator must be used to select special inscriptions and symbols (see ordering examples 4). In this case a CIN (Configuration Identification Number) is generated for placement of future orders. It is then possible to place an order directly via the SIRIUS ACT configurator using the CIN (Mail shopping cart) or via the standard ordering channels.

Standard ordering channels:

- Configurator: [www.siemens.com/sirius-act/configurator](http://www.siemens.com/sirius-act/configurator)
- Industry Mall: [www.siemens.com/industrymall](http://www.siemens.com/industrymall)

##### Ordering example 1

A label with 2 lines of text is required:

**3SU1900-0AB71-0AZ0**

**Q1Y**

Z1=LIFT

Z2=LOWER

##### Ordering example 2

A label inscribed with symbol No. 5011 according to IEC 60417 is required:

**3SU1900-0AB71-0AZ0**

**Q3Y**

Z=5011 IEC

##### Ordering example 3

A label inscribed with symbol No. 1118 according to ISO 7000 is required:

**3SU1900-0AB71-0AZ0**

**Q3Y**

Z=1118 ISO

##### Ordering example 4

A label with customized inscription is required:

**3SU1900-0AB71-0AZ0**

**Q9Y**

CIN.....

(20-digit number generated from the SIRIUS ACT configurator)

### Overview

Label holders of black plastic, and labeling plates (black with white print or silver-colored with black print) for sticking or snapping in place, are available for labeling. They are not suitable for EMERGENCY STOP buttons. Note mounting dimensions!

The label holders cannot be used in conjunction with sealing plugs, protective caps, protective collars and locking devices.

### Inscription

The inscription is in upper/lower case, all words begin with upper case letters. Graphic symbols, including those not listed in the catalog, are according to ISO 7000 or IEC 60417.

For customized inscriptions, see "Options", page 2/405.

### Labeling plates for sticking/snapping in place

The labels are available in three sizes:

- 12.5 mm × 27 mm
- 17.5 mm × 27 mm
- 27 mm × 27 mm

For mounting the labeling plates, you can choose between label holders for stick-on or snap-on mounting.

### Selection and ordering data

Multi-unit packaging, see page 2/360.

## Options

### Customized inscriptions

The labels can be inscribed with text and symbols not listed in the ordering data.

The default typeface used for inscriptions with text is Arial and the text is centered.

Up to 11 characters per line are possible.

#### Font height

Label size 12.5 mm × 27 mm, max. 3 lines:

Font height	1-line	4 mm
	2-line	3 mm
	3-line	1.75 mm

Label size 17.5 mm × 27 mm, max. 3 lines:

Font height	1- to 2-line	4 mm
	3-line	3 mm

Label size 27 mm × 27 mm, max. 5 lines:

Font height	1- to 3-line	4 mm
	4-line	3.5 mm
	5-line	3 mm

#### Examples of customized inscriptions

Two-line inscription in upper/lower case (Q0Y)

Single-line inscription in upper case (Q1Y)

Three-line inscription in lower case (Q2Y)

Symbol number 5011 according to IEC 60417 (Q3Y)

Any symbol according to order form supplement (Q9Y)

### Ordering notes

Append the following order codes to the article number:

- **Q0Y:** Text line(s) in upper/lower case, always upper case for beginning of line, e.g. Z1=Lift Z2=Lower
- **Q1Y:** Text line(s) in upper case, e.g. Z1=LIFT Z2=LOWER
- **Q2Y:** Text line(s) in lower case, e.g. Z1=lift off Z2=lower off
- **Q5Y:** Text line(s) in upper/lower case, all words begin with upper case letters, e.g. Z1=Lift Off Z2=Lower Off
- **Q3Y:** Symbol with number according to ISO 7000 or IEC 60417
- **Q9Y:** Inscription of choice, text or symbol, can only be ordered via SIRIUS ACT configurator with a Configuration Identification Number (CIN)

When ordering, specify the required inscription without spaces after Z=, Z1=, etc., in addition to the article number and order code (see ordering examples 1 to 3).

In the case of multi-line inscriptions, the text must be assigned to the respective line, e.g. Z1=LIFT Z2=LOWER (see ordering example 1).

Symbols can also be ordered with numbers according to ISO 7000 or IEC 60417 (see ordering examples 2 and 3).

The SIRIUS ACT configurator must be used to select special inscriptions and symbols (see ordering examples 4). In this case a CIN (Configuration Identification Number) is generated for placement of future orders. It is then possible to place an order directly via the SIRIUS ACT configurator using the CIN (Mall shopping cart) or via the standard ordering channels.

Standard ordering channels:

- Configurator: [www.siemens.com/sirius-act/configurator](http://www.siemens.com/sirius-act/configurator)
- Industry Mall: [www.siemens.com/industrymall](http://www.siemens.com/industrymall)

#### Ordering example 1

A label with 2 lines of text is required:

**3SU1900-0AC16-0AZ0**

**Q1Y**

Z1=LIFT

Z2=LOWER

#### Ordering example 2

A label inscribed with symbol No. 5011 according to IEC 60417 is required:

**3SU1900-0AC16-0AZ0**

**Q3Y**

Z=5011 IEC

#### Ordering example 3

A label inscribed with symbol No. 1118 according to ISO 7000 is required:

**3SU1900-0AC16-0AZ0**

**Q3Y**

Z=1118 ISO

#### Ordering example 4

An indicator light with customized inscription is required:

**3SU1900-0AC16-0AZ0**

**Q9Y**

CIN.....

(20-digit number generated from the SIRIUS ACT configurator)

### Accessories

#### Labels > Labeling plates for enclosures

#### Overview

The labeling plates in size 22 mm x 22 mm can be attached to enclosures with recesses for labels. There are versions in black with white print or silver-colored with black print.

#### Inscription

The inscription is in upper/lower case, all words begin with upper case letters. Graphic symbols, including those not listed in the catalog, are according to ISO 7000 or IEC 60417.

For customized inscriptions, see "Options", page 2/409.

#### Selection and ordering data

Multi-unit packaging, see page 2/360.

## Options

### Customized inscriptions

The labels can be inscribed with texts and symbols not listed in the ordering data.

The default typeface used for inscriptions with text is Arial and the text is centered.

The font height is 4 mm (1- and 2-line) and 3.5 mm (3-line).

Up to 8 characters per line are possible.

#### Examples of customized inscriptions

Two-line inscription in upper/lower case (Q0Y)

Single-line inscription in upper case (Q1Y)

Backing plate for enclosures, customized inscription (Q2Y)

Symbol number 5011 according to IEC 60417 (Q3Y)

Any symbol according to order form supplement (Q9Y)

### Ordering notes

Append the following order codes to the article number:

- **Q0Y:** Text line(s) in upper/lower case, always upper case for beginning of line, e.g. Z1=Lift Z2=Lower
- **Q1Y:** Text line(s) in upper case, e.g. Z1=LIFT Z2=LOWER
- **Q2Y:** Text line(s) in lower case, e.g. Z1=lift off Z2=lower off
- **Q5Y:** Text line(s) in upper/lower case, all words begin with upper case letters, e.g. Z1=Lift Off Z2=Lower Off
- **Q3Y:** Symbol with number according to ISO 7000 or IEC 60417
- **Q9Y:** Inscription of choice, text or symbol, can only be ordered via SIRIUS ACT configurator with a Configuration Identification Number (CIN)

When ordering, specify the required inscription without spaces after Z=, Z1=, etc., in addition to the article number and order code (see ordering examples 1 to 3).

In the case of multi-line inscriptions, the text must be assigned to the respective line, e.g. Z1=LIFT Z2=LOWER (see ordering example 1).

Symbols can also be ordered with numbers according to ISO 7000 or IEC 60417 (see ordering example 2 and 3).

The SIRIUS ACT configurator must be used to select special inscriptions and symbols (see ordering example 4). In this case a CIN (Configuration Identification Number) is generated for placement of future orders. It is then possible to place an order directly via the SIRIUS ACT configurator using the CIN (Mall shopping cart) or via the standard ordering channels.

Standard ordering channels:

- Configurator: [www.siemens.com/sirius-act/configurator](http://www.siemens.com/sirius-act/configurator)
- Industry Mall: [www.siemens.com/industrymall](http://www.siemens.com/industrymall)

#### Ordering example 1

A label with 2 lines of text is required:

**3SU1900-0AF16-0AZ0**

**Q1Y**

Z1=LIFT

Z2=LOWER

#### Ordering example 2

A label inscribed with symbol No. 5011 according to IEC 60417 is required:

**3SU1900-0AF16-0AZ0**

**Q3Y**

Z=5011 IEC

#### Ordering example 3

A label inscribed with symbol No. 1118 according to ISO 7000 is required:

**3SU1900-0AF16-0AZ0**

**Q3Y**

Z=1118 ISO

#### Ordering example 4

A label with customized inscription is required:

**3SU1900-0AF16-0AZ0**

**Q9Y**

CIN.....

(20-digit number generated from the SIRIUS ACT configurator)

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Accessories

#### Labels > Labels for laser printers

#### Overview

##### More information

For the Label Designer software, see [www.siemens.com/sirius-label-designer](http://www.siemens.com/sirius-label-designer)

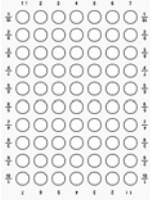

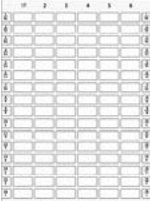

##### Label inscriptions

Using the *Label Designer* software, which can be downloaded from the internet, and the labeling plates for laser inscription you can create your own customized labels with a standard laser printer. The self-adhesive or snap-on labels can be stuck or snapped onto the corresponding label holders. Round labels are provided for inserting in illuminated pushbuttons and switches.

The labels are suitable for inscription with one to three lines of text or symbols.

For applications with more exacting requirements we recommend factory-printed labeling plates and insert labels (laser-printed or engraved depending on the type).

## Options

### Customized inscriptions

The labels can be inscribed with text not listed in the ordering data.

The EMERGENCY STOP backing plates can be divided into as many as four radial segments. Each segment can be custom-labeled.

The default typeface used for inscriptions with text is Arial and the text is centered.

#### EMERGENCY STOP backing plate 75 mm:

The font height is 5 mm.

With two radial segments, up to 20 characters are permissible.  
With four radial segments, up to 10 characters are permissible.

#### EMERGENCY STOP backing plate 60 mm:

The font height is 4 mm.

With two radial segments, up to 16 characters are permissible.  
With four radial segments, up to 8 characters are permissible.

#### EMERGENCY STOP backing plate 45 mm:

The font height is 4 mm.

With two radial segments, up to 10 characters are permissible.

### Ordering notes

Append the following order codes to the article number:

- **Q0Y:** Segment(s) in upper/lower case, always upper case for beginning of segment, e.g. Z1=Not halt Z2=Emergency stop
- **Q1Y:** Segment(s) in upper case, e.g. Z1=NOT HALT Z2=EMERGENCY STOP
- **Q2Y:** Segment(s) in lower case, e.g. Z1=not halt Z2=emergency stop
- **Q5Y:** Segment(s) in upper/lower case, all words begin with upper case letters, e.g. Z1=Not Halt Z2=Emergency Stop
- **Q3Y:** Symbol with number according to ISO 7000 or IEC 60417
- **Q9Y:** Inscription of choice, text or symbol, can only be ordered via SIRIUS ACT configurator with a Configuration Identification Number (CIN)

When ordering, specify the required inscription without spaces after Z=, Z1=, etc., in addition to the article number and order code (see ordering examples 1 to 4).

Symbols can also be ordered with numbers according to ISO 7000 or IEC 60417 (see ordering examples 2 and 3).

The SIRIUS ACT configurator must be used to select special inscriptions and symbols (see ordering example 5). In this case a CIN (Configuration Identification Number) is generated for placement of future orders. It is then possible to place an order directly via the SIRIUS ACT configurator using the CIN (Mall shopping cart) or via the standard ordering channels.

Standard ordering channels:

- Configurator: [www.siemens.com/sirius-act/configurator](http://www.siemens.com/sirius-act/configurator)
- Industry Mall: [www.siemens.com/industrymall](http://www.siemens.com/industrymall)

With ordering options Q0Y, Q1Y, Q2Y, Q3Y and Q5Y, a single-line inscription of two or four radial segments can be implemented. The text or symbol must be assigned to the respective radial segments as follows:

#### Ordering example 1, two radial segments

An EMERGENCY STOP backing plate, diameter 75 mm, with two radial segments is required

#### **3SU1900-0BB31-0AZ0**

##### **Q1Y**

Z1=NOT  
Z2=HALT

#### Ordering example 2, four radial segments

An EMERGENCY STOP backing plate, diameter 75 mm, with four radial segments is required

#### **3SU1900-0BB31-0AZ0**

##### **Q1Y**

Z1=E-STOP  
Z2=EMERGENCIA  
Z3=NOT-HALT  
Z4=EMERGENZA

#### Ordering example 3

An EMERGENCY STOP backing plate, diameter 75 mm, with symbol No. 5011 according to IEC 60417 is required:

#### **3SU1900-0BB31-0AZ0**

##### **Q3Y**

Z=5011 IEC

#### Ordering example 4

An EMERGENCY STOP backing plate, diameter 75 mm, with symbol No. 1118 according to ISO 7000 is required:

#### **3SU1900-0BB31-0AZ0**

##### **Q3Y**

Z=1118 ISO

#### Ordering example 5

An EMERGENCY STOP backing plate, diameter 75 mm, with customized inscription is required:

#### **3SU1900-0BB31-0AZ0**

##### **Q9Y**

CIN.....

(20-digit number generated from the SIRIUS ACT configurator)

## Commanding and signaling devices

### SIRIUS ACT pushbuttons and indicator lights

#### Accessories

#### Protection/access protection

#### Overview

Protection and access protection are suitable for actuators and indicators with diameters 22 mm and 30 mm.

The protective collars cannot be used in conjunction with label holders or single frames.

### Overview

Devices	Page	Application	Standards
	3/4	For all applications from 0.3 A to 80 A with a rated breaking capacity of 10 000 A and 15 000 A acc. to EN 60898-1. Applications for universal current from 0.3 A to 63 A, version 25 kA, acc. to EN 60947-2.	EN 60898-1/-2 EN 60947-2 UL 1077 CSA 22.2 GB 10963.1/2
	3/14	Circuit Breaker for Equipment offer optimum protection for all applications in AC and DC control circuits in industrial applications and plant engineering. They protect solenoid valves, servo motors, signal lamps or even PLC inputs.	EN 61373 EN 45545-2 UL 1077 IEC 60934
	3/15	For socket outlet and lighting circuits in all building installations where a switchable neutral conductor is required.  The miniature circuit breaker 1+N saves space in the distribution board.	EN 60898-1
	3/17	The new communication-capable MCB's record measured values and status information and transmit this data wirelessly to higher-level systems.	--
	3/18	Auxiliary switches, fault signal contacts, shunt trips, undervoltage releases for higher system availability, RC units for personal safety and remote controlled mechanisms for remote switching.	
	3/20	Busbars in 10 mm <sup>2</sup> and 16 mm <sup>2</sup> save space in the distribution board and time during mounting. Busbars in 18 mm <sup>2</sup> and 25 mm <sup>2</sup> acc. to UL 508 and CSA.	UL 508

<sup>1)</sup> See Catalog LV 10.

## SENTRON Protection, Switching, Measuring and Monitoring Devices

### Protection Devices

#### 5SY Miniature Circuit Breakers

#### Introduction

#### Overview

Miniature circuit breakers are used to protect systems and installations in buildings and for industrial applications.

Used in industrial applications and plant engineering, miniature circuit breakers can be supplemented with additional components, such as auxiliary switches, fault signal contacts, shunt trips, undervoltage releases, remote controlled mechanisms, RC units, and arc fault detection devices.

The devices are approved for worldwide use according to IEC standards for power supply systems up to 250/440 V AC. 72 V DC per pole is permitted in DC systems.

For North America, there is an additional approval according to UL 1077 for use as "supplementary protectors" in systems up to 480/277 V AC. For use in ship building, the devices also have numerous certifications according to shipping classifications BV, DNV, GL and LRS.

#### Benefits

- Optional top or bottom infeed as the terminals are identical
- Clear and visible conductor connection in front of the rear busbar facilitates controls
- The conductor is easily inserted into the terminal thanks to the large and easily accessible wiring space

- Quick and easy manual removal of miniature circuit breakers from the busbar assembly, for example if connections need to be changed
- Time-saving replacement of parts as busbars no longer need to be freed from adjacent devices

- Double terminal chambers permit accommodation of 2 wires of different cross-sections.

- The 5SY miniature circuit breakers are ideal for the quick and easy mounting of auxiliary switches and fault signal contacts. Captive metal brackets on the additional components ensure the quick and easy mounting of devices on the miniature circuit breakers without the need for tools.

<sup>1)</sup> 1 MW (modular width) = 18 mm.

### Note:

The 5ST3600 or 5ST3630 busbars enable simple wiring of 4-pole miniature circuit breakers see page 3/22.

For application examples, see Configuration Manual "Miniature Circuit Breakers" at: [www.siemens.com/lowvoltage/manuals](http://www.siemens.com/lowvoltage/manuals).

## SENTRON Protection, Switching, Measuring and Monitoring Devices

### Protection Devices

#### Busbars

#### 5ST standard busbars

##### Overview

The busbar system with pin-type connections can be used for all 5SL6, 5SJ6 ...-KS and 5SY miniature circuit breakers with or without mounted auxiliary switch (AS) or fault signal contact (FC).

Busbars in 10 mm<sup>2</sup> and 16 mm<sup>2</sup> versions are available.

With bars that can be cut to length, the 5ST37 busbar system can be tailored to any requirements.

The extremely flexible 5ST36 busbar system with fixed lengths also enables installation in any length as the busbars can be overlapped.

There is no further need for time-consuming tasks, such as cutting, cutting to length, deburring, cleaning of cut surfaces and mounting of end caps.

Any free pins on the busbars can be made safe by covering with touch protection.

##### Benefits

- Between the rows of devices, the busbar, which is located at the bottom and behind the conductor, provides an optimum wiring space with easy view of the inserted conductor. This enables easy control of connections.

- The ability to overlap when mounting the busbars enables a cross-section enlargement of up to 32 mm<sup>2</sup> using the respective components, 10 mm<sup>2</sup> and 16 mm<sup>2</sup>.

- By overlapping the busbars with fixed lengths, it is possible to achieve device combinations with any number of devices.

- The fact that the connection of the conductor is always clearly visible facilitates cable entry of all pole types and considerably reduces mounting times.

## Technical specifications

		5ST3
<b>Standards</b>		EN 60439-1 (VDE 0660-500): 2005-01
<b>Busbar material</b>		SF-Cu F 24
<b>Partition material</b>		Plastic, Cycloyl 3600 heat-resistant over 90 °C flame-retardant and self-extinguishing, dioxin and halogen-free
<b>Rated operational voltage <math>U_c</math></b>	V AC	400
<b>Rated current <math>I_n</math></b>		
• Cross-section 10 mm <sup>2</sup>	A	63
• Cross-section 16 mm <sup>2</sup>	A	80
<b>Rated impulse withstand voltage <math>U_{imp}</math></b>	kV	4
<b>Test pulse voltage (1.2/50)</b>	kV	6.2
<b>Rated conditional short-circuit current <math>I_{cc}</math></b>	kA	25
<b>Resistance to climate</b>		
• Constant atmosphere	Acc. to DIN 50015	23/83; 40/92; 55/20
• Humid heat	Acc. to IEC 60068-2-30	28 cycles
<b>Insulation coordination</b>		
• Overvoltage category		III
• Pollution degree		2
<b>Maximum busbar current <math>I_S</math> per phase</b>		
• Infeed at the start of the busbar		
- Cross-section 10 mm <sup>2</sup>	A	63
- Cross-section 16 mm <sup>2</sup>	A	80
• Infeed at the center of the busbar		
- Cross-section 10 mm <sup>2</sup>	A	100
- Cross-section 16 mm <sup>2</sup>	A	130

**Infeed at the start or end of the busbar****Infeed along the busbar or midpoint infeed**

The sum of the outgoing current per branch (1, 2, 3 ... n) must not be greater than the max. busbar current  $I_S$ /phase.

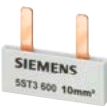

# SENTRON Protection, Switching, Measuring and Monitoring Devices

## Residual Current Protective Devices / Arc Fault Detection Devices (AFDDs)

## Introduction

## Overview (continued)

**SIGRES**

SIGRES RCCBs were developed for use in harsh ambient conditions, such as swimming baths as protection against chlorine and ozone, in the agricultural sector (ammonia), on building sites and in the chemical industry (nitrogen oxide, sulfur dioxide, solvents), in the food processing industry (hydrogen sulfide) and in unheated rooms (dampness). The patented active condensation protection requires a continuous power supply and bottom infeed if the RCCB is switched off.

When used in ambient conditions as defined in product standard EN 61008-1, the operation interval for pressing the test button can be extended to once a year.

**Super resistant** **K**

Super resistant (short-time delayed) RCCBs meet the maximum permissible break times for instantaneous devices. However, by implementing a short-time delay they prevent unnecessary tripping operations, and thus plant faults, when pulse-shaped leakage currents occur – as is the case when capacitors are switched on.

**Selective** **S**

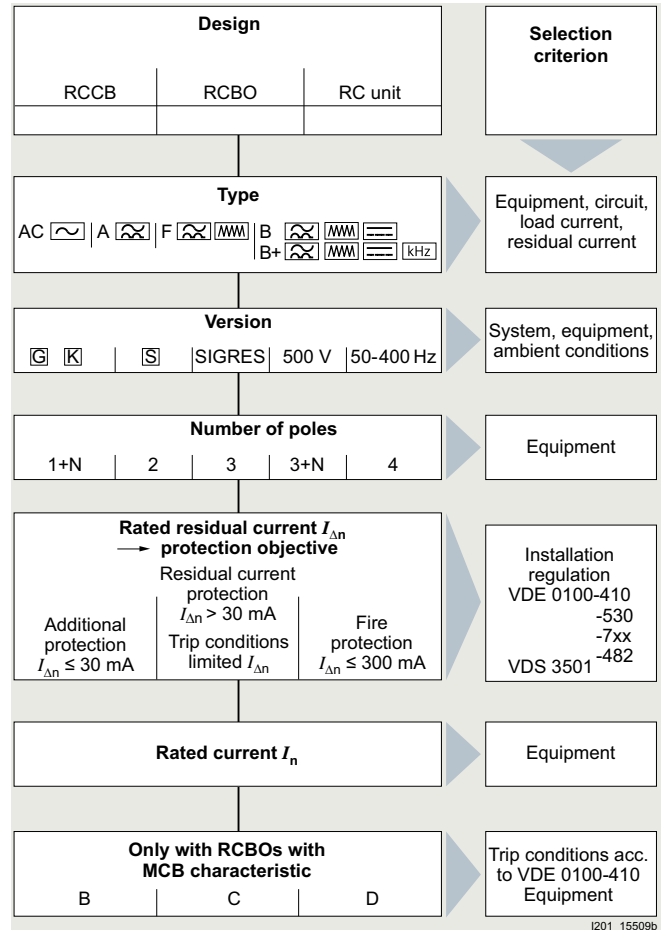

Can be used as upstream group switch for selective tripping contrary to downstream, instantaneous or short-time delayed RCCBs.

**Short-time delayed** **G**

If installations/equipment whose inadvertent tripping could lead to personal injury or material damage (such as freezers, computers) are protected by residual current protective devices, the tripping time of these devices must be at least 10 ms as defined according to ÖVE/ÖNORM E 8001-1.

Note:

You will find further information on the subject of residual current protective devices in the technology primer "Residual Current Protective Devices", Article No.: E10003-E38-2B-G0090 and in the Configuration Manual Residual Current Protective Devices/ Arc Fault Detection Devices (AFDDs) ([www.siemens.com/lowvoltage/manuals](http://www.siemens.com/lowvoltage/manuals)).

Selection aid for finding the appropriate residual current protective device

## SENTRON Protection, Switching, Measuring and Monitoring Devices

### Residual Current Protective Devices / Arc Fault Detection Devices (AFDDs)

#### 5SV RCCBs

##### Overview

RCCBs are used in all systems up to 240/415 V AC. Devices of type AC trip in the event of sinusoidal AC residual currents, type A also trips in the event of pulsating DC residual currents.

In addition, RCCBs type F also detect residual currents with mixed frequencies up to 1 kHz.

RCCBs with a rated residual current of maximum 30 mA are used for personnel, material and fire protection, as well as for protection against direct contact. RCCBs with a rated residual current of 10 mA are primarily used in areas that represent an increased risk for personnel.

Since the introduction of DIN VDE 0100-410, all socket outlet current circuits up to 20 A must also be fitted with residual current protective devices with a rated residual current of max. 30 mA. This also applies to outdoor electrical circuits up to 32 A for the connection of portable equipment.

Devices with a rated residual current of maximum 300 mA are used as preventive fire protection in case of insulation faults. RCCBs with a rated residual current of 100 mA are primarily used in European countries outside Germany.

##### Benefits

- Instantaneous residual current operated circuit breakers with the N connection on the left or right-hand side enable simple bus mounting with standard pin busbars with miniature circuit breakers installed on the right-hand side.
- Instantaneous type A devices have a surge current withstand capability with current waveform 8/20  $\mu$ s of more than 1 kA, super resistant devices of more than 3 kA and selective devices of more than 5 kA. This ensures safe operation.
- SIGRES has an extremely long service life due to patented active condensation protection, and identical dimensions enable the quick and easy replacement of existing instantaneous RCCBs.
- Super resistant devices increase system availability, as unnecessary tripping is prevented in power supply systems with short-time glitches.
- Selective RCCBs increase system availability as a staggered tripping time enables the selective tripping of RCCBs connected in series in the event of a fault.
- Auxiliary switches, fault signal contacts, undervoltage releases and shunt trips are also available as additional components.
- By means of internal contacts, effective touch protection is provided when grasping and manually operating the latching slide.
- To facilitate entry of pin busbars with connection cables up to 35 mm<sup>2</sup>, the devices are equipped with rectangular terminals for the accommodation of funnel-shaped cable entries.
- By means of standardized clearances of the terminals in modular width dimensions, the RCCBs and MCBs can be optionally connected to busbars on the top or on the bottom.

**SENTRON Protection, Switching, Measuring and Monitoring Devices**

Residual Current Protective Devices / Arc Fault Detection Devices (AFDDs)

**5SV1 electromechanic RCBOs****Overview**

Residual current circuit breakers with overload protection combine residual current detection, short circuit and overcurrent protection in one device, thus enabling combined electric-shock and line protection. The protection devices enhance reliable operation and system availability, simplifying planning.

The new 5SV1 is the first electromechanic (voltage independent) RCD on the IEC market in only one modular width. In combination with the 5SM6 AFD unit, preventive fire protection is thus possible in a total of only 2 modular widths.

## SENTRON Protection, Switching, Measuring and Monitoring Devices

Residual Current Protective Devices / Arc Fault Detection Devices (AFDDs)

### Additional components

#### Benefits

##### Can be universally retrofitted with all additional components

- Captive metal brackets on the additional components ensure the quick and easy mounting of devices without the need for tools.
- Fault signal contacts with TEST and RESET button enable simple testing of auxiliary circuits and, in the event of a fault, acknowledgement of the fault over the RESET button without the need to switch the RCCBs.
- The auxiliary switches with TEST button enable simple manual testing of control circuits during operation of the entire installation without the need to switch the RCCBs.
- Bus systems, such as *instabus* KNX, AS-Interface bus or PROFIBUS, can be integrated in the communication over binary inputs
- The leakage current measurement device enables the systematic selection of the rated residual current, thus preventing inadvertent tripping of an RCCB.

##### Remote controlled mechanisms

- Remote controlled mechanisms with ARD and Power have integrated auxiliary switches and fault signal contacts.
- More 5ST3... additional components, such as AS, FC, ST and UR, can be added to the right-hand side of the remote controlled mechanism in line with the Siemens mounting concept.
- The remote controlled mechanisms with ARD and Power have an LED display on the front of the device to show the switching state and for diagnostics.
- The 5ST3070 remote controlled mechanism has an extended temperature range from -40 °C to +70 °C

## SENTRON Protection, Switching, Measuring and Monitoring Devices

Residual Current Protective Devices / Arc Fault Detection Devices (AFDDs)

### 5SM6 / 5SV6 arc fault detection devices (AFDDs)

#### Overview

5SM6 arc fault detection devices, AFDDs

5SV6 AFDDs with integrated MCB in only 1 MW

#### Characteristics

The Siemens portfolio of protective devices has been proving itself in the field for many years. This range of fuses, miniature circuit breakers and residual current protective devices has now been expanded to include AFDDs (arc fault detection devices). These AFDDs detect arcing faults caused by serial faults or loose contacts or as a result of insulation faults that enable contact between phase conductors or between phase and protective conductors. They therefore offer extremely effective protection against fires started by electrical faults.

Generally speaking, arcing faults in the circuit can result from damage to cables and other insulations and from contamination. Insulation faults result, for example, from vibrations, thermal expansion and contraction, mechanical loads and aging.

A distinction is made between 3 types of arcing faults:

#### Serial arcing faults

These are caused by breaks in the conductor or when a loose contact is in the circuit in series with the load. As the current flow in such cases is always lower than the operational load current, miniature circuit breakers and residual current protective devices are unable to detect such faults and initiate tripping.

The AFDD is specially designed to detect the specific characteristics of these arcing faults, and it reliably disconnects the affected circuit as soon as the limit values are exceeded.

#### Parallel arcing faults between phase conductor/neutral conductor or phase conductor/phase conductor

These are caused by electric arcs resulting from damage to the insulation that permits contact between the two conductors. In this case, the level of current is determined by the impedances in the circuit. Depending on the rated current of the overcurrent protection device (for instance a miniature circuit breaker), this can be disconnected. However, if the impedance in the circuit is too high to reach the trip current of the overcurrent protection device, no tripping takes place. AFDDs disconnect the currents of arcing faults upwards of 2.5 A, thus providing reliable protection in the case of such faults.

#### Parallel arcing faults between phase conductor/protective conductor

Arcing faults against the protective conductor are reliably detected and shut down by residual current protective devices. Residual current protective devices with rated residual currents up to max. 300 mA have already been providing effective fire protection in such cases for many years. AFDDs also detect these arcing faults and provide adequate fire protection where no residual current protective device is implemented.

#### Preventing undesired tripping operations

Electric arcs and high-frequency signals occur during normal operation in networks with multiple electrical loads (e.g. electric motors, light switches, dimmers). The AFDD must not break the circuit in such cases.

Thanks to the sophisticated detection logic of our AFDDs, they are able to clearly distinguish between normal operational interference signals and hazardous arcing faults.

#### Product versions

Modern electrical devices and the rising number of communication and multimedia devices lead to a higher current loading in the electrical installation of buildings – in new buildings as well as in the modernization of existing buildings. In case of faults, there is above all the danger of electric fires, in addition to electric shock or the destruction of electrical systems. With SENTRON components, Siemens offers secure protection in electrical installations.

#### 5SM6 arc fault detection devices, AFDDs

Siemens offers four product versions which can be used in various combinations with a range of 1MW/2MW wide miniature circuit breakers and/or RCBOs up to 16 A or 40 A rated current.

This simplifies product selection and reduces inventory, while enabling coverage of every conceivable application. It also means that our tried and tested protective devices (MCBs, RCBOs) can be combined with the new functionality provided by arc fault protection. In particular, the version with RCBOs offers a protective device that provides comprehensive personnel, short-circuit, overload and fire protection in a single device.

The 5SM6 AFDDs can be connected easily and quickly. The miniature circuit breakers or RCBOs can be mounted quickly and simply by just snapping them onto the mounting rail without the need for tools. For a fast and reliable power supply, the infeed can be implemented via a busbar assembly.

The version with a compact RCBO (5SV1) in 1 MW is a space-saving alternative that is ideal for retrofitting.

Whether auxiliary switch or fault signal contact – the AFDDs can be combined at random with the versatile range of additional components from the familiar portfolio of 5SY miniature circuit breakers and 5SU1 RCBOs.

This also enables connection to a higher-level I&C system.

# SENTRON Protection, Switching, Measuring and Monitoring Devices

## Residual Current Protective Devices / Arc Fault Detection Devices (AFDDs)

### 5SM6 / 5SV6 arc fault detection devices (AFDDs)

#### Overview (continued)

##### 5SV6 AFDDs with integrated MCB in only 1 MW

Arc fault detection devices detect serial and parallel arcing faults and provide protection from electrical fires. According to DIN VDE 0100-420, they are mandated for use in many areas of application.

Thanks to the width identical to the MCB, the 5SV6 AFDD with integrated MCB is not only easily installable in new buildings, it also features straight-forward retrofitting in existing buildings. This provides an enhanced protection function without additional space requirement. The standards-compliant extension of the electrical installation for protection against electrical fires is thus quickly possible at any time.

#### Benefits

- 50% space saving
- Easy retrofitting
- Increased system availability
- New busbar concept
- 1000 V ISO testing without removing conductors

#### Status displays and self tests

In order to facilitate fault locating in the event of tripping, AFDDs have a display with 5 LEDs that provide information on the cause of tripping (serial/parallel arcing faults, overvoltage). The sophisticated detection electronics system also automatically checks the functionality of the AFDD. If the self-monitoring process detects a fault, the AFDD switches off and displays the corresponding indication.

#### Integrated overvoltage protection

Depending on the load distribution in the three-phase current system, an interruption on the infeed side of the neutral conductor may cause a shift of the neutral point and thus an increase in voltage between the phase conductor and the neutral conductor. This increase in voltage can damage the loads or present a fire risk due to overloaded components.

In order to ensure all-round protection, the AFDDs are fitted with an overvoltage release that disconnects when the voltage between phase conductor and neutral conductor exceeds 275 V, thus isolating downstream loads from the hazardous line voltage.

### Overview

#### Remote control switches up to 16 A and 20 up to 63 A

5TT4101-0 remote control switch for AC applications, up to 16 A, 2 NO contacts (left)  
 5TT44 remote control switch for AC applications, 2 CO contacts (center)  
 5TT4930 auxiliary switch for 5TT44 remote control switches, 1 NO + 1 NC (right)

Remote control switches are used in residential and non-residential buildings, as well as the switchboard engineering sector. They trip in the event of "current inrushes", i.e. pulses, and then electromechanically save the switching position, even in the event of a power failure.

All the devices have the CE mark and can also be equipped with an additional auxiliary switch. All devices have a switching position indication and are operated manually. The switching noise is particularly quiet and meets the requirements of residential buildings.

In addition to the 5TT41 remote control switch for up to 16 A, the 5TT44 version is now also available for 20 ... 63 A (up to 32 A DC).

### Benefits

- Remote control switches with central/group switching support convenient and high feature applications
- High functional reliability due to electromechanical design without fault-prone electronics
- The devices have no standby losses
- All devices have a switching position indication and are operated manually
- All the remote control switches can be fitted with an additional auxiliary switch
- The remote control switches can be bus-mounted on 5TE9100 and 5TE9101 busbars; e.g.: bus mounting of the N conductor and/or infeed

### Central switching functions

Versions with central On/Off function allow the central switching of all connected remote control switches. This type of central switching can also be actuated using a time switch. All remote control switches can be switched to the ON or OFF switching state, regardless of their current switching state.

#### Note:

Synchronous switching of the contacts cannot be guaranteed with parallel switching. Products with central/group switching must be used for the mutual control of several remote control switches.

#### Contact sequences for remote control switches up to 16 A

1 – 2 – 1+2 – 0 or 1 – 0 – 2 – 0 means:

0: No contact closed

1: Only contact 1 closed

2: Only contact 2 closed

1+2: Contact 1 and contact 2 are closed.

The contact positions are constantly changing with each pushbutton impulse.

#### Note:

Synchronous switching of the contacts cannot be guaranteed with parallel switching. Products with central/group switching must be used for the mutual control of several remote control switches.

#### Bus mounting

All 5TT41 remote control switches up to 16 A and 5TT44 from 20 ... 63 A can be bus-mounted with each other.

### Hardware and software components

#### Overview (continued)

#### Expansion modules for 7KM PAC measuring devices

					
	Switched Ethernet For 7KM PAC3200, 7KM PAC4200 and 3VA COM100/COM800	PROFIBUS DP For 7KM PAC3200, 7KM PAC4200 and 3VA COM100/COM800	RS 485 For 7KM PAC3200, 7KM PAC4200 and 3VA COM100/COM800	4DI/2DO For 7KM PAC4200 (number of digital inputs/outputs per module 4/2)	7KM PAC I(N), I(Diff), analog For 7KM PAC4200 and 3200
Protocol	PROFINET IO PROEnergy Modbus TCP	DPV1	Modbus RTU	--	--
Maximum number of connectable expansion modules of the same type	1	1	1	2	1

#### The powerconfig software for commissioning

	Software tool for the efficient commissioning and diagnosis of communication-capable SENTRON components
License	Free use
Supported devices	All PAC measuring devices incl. expansion modules, 3WL/3VL/3VA circuit breakers and further communication-capable components, e.g. ATC6300
General range of functions	The PC-based tool facilitates parameterization of the devices, resulting in substantial time savings, particularly when several devices have to be set up. The device settings can be stored in the PC and printed out. The tool enables monitoring of instantaneous measured quantities, which can be saved or printed out if required. Execution of specific device functions, such as resetting of devices and setting of energy counters
Supported languages	German, English, Chinese, Spanish, Portuguese, Italian, Turkish
Service functions	Firmware updates and switching of language packs for 7KM PAC measuring devices
Functional scope with 7KM PAC4200 and 3VA	Readout of data stored in the device (events; load profile history; daily energy counters), which are saved in csv format

Setting of parameter values

Display of actual measured quantities

Display of the circuit breaker state

### Overview

Hardware components of the PC-based power monitoring system

Software component of the power monitoring software: powermanager

#### **Power monitoring system with SENTERON components**

The TÜV-certified power monitoring system from the SENTERON portfolio consists of the 7KT/7KM PAC measuring devices, the 3WL/3VA/3VL circuit breakers, and the powermanager power monitoring software. This forms the technical basis for supporting a corporate energy management system as specified by ISO 50001.

The hardware and software components are optimally coordinated with each other. For example, special drivers for the SENTERON devices are integrated in the powermanager power monitoring software. They enable energy data to be captured without any great configuration effort and they indicate the key measured values or the status by means of predefined views.

This reduces the engineering overhead. The device functions are optimally supported in the software.

#### **Features of the powermanager power monitoring software**

The powermanager power monitoring software constitutes the optimum technical basis for supporting a corporate power monitoring system as specified by ISO 50001 and EN 16247:

- Independent power monitoring software
- Can be operated using a Windows PC, circuit breakers and measuring devices with Ethernet connection
- Easy getting started with basic license (Basic Package), can be extended with flexible licensing concept according to customer requirements
- Fully scalable, relative to number of devices and software functions
- Optimum integration of 7KT/7KM PAC measuring devices, 3WL/3VL/3VA circuit breakers, 7KM PAC 5200 power quality devices and any other Modbus devices
- Support of the various device and communication interfaces (Modbus RTU, Modbus TCP)
- Status display of devices
- Available languages: German, English, Spanish, Portuguese, Italian, French, Turkish, Chinese

## SENTRON Protection, Switching, Measuring and Monitoring Devices

### Power Monitoring

#### 7KN Powercenter 1000

##### Overview

The 7KN Powercenter 1000 data transceiver is designed to enable comprehensive data acquisition of communication and metering-capable circuit protection devices. This increases transparency in the final circuit, through which optimization measures can be derived to increase system availability.

Up to 24 devices can communicate wirelessly with 7KN Powercenter 1000 via radio link. This means that no increased installation effort is required for communication. Selected measured values of the circuit protection devices are stored in the data transceiver for up to 30 days. These can be visualized to ensure extensive data availability.

The compact design of the 7KN Powercenter 1000, in a single modular width, results in an extremely small footprint in the distribution board so as to enable wireless, comprehensive data acquisition.

This is complemented by easy mounting on a 35 mm DIN rail and plug-in terminals for a 24 V DC power supply, which can be immediately looped through (daisy chain) to supply other devices.

The integrated Bluetooth interface enables simple on-site communication and commissioning via the SENTRON powerconfig mobile app. Connection to various configuration or power monitoring systems, such as SENTRON powerconfig, SENTRON powermanager or customized solutions, is ensured via the Modbus TCP interface. Furthermore, this interface also enables a connection via e.g. 7KN Powercenter 3000 or via LOGO! to cloud applications.

##### Selection and ordering data

	Mounting	Power supply	Devices that can be connected	Interfaces	Article No.	Weight

## Overview

Expansion modules are used as communication interfaces and for expanding the digital inputs/outputs and analog measuring inputs for the 7KM PAC3200/4200 measuring devices.

The expansion modules are plugged in at the back of the measuring device. The device identifies the module automatically and presents the relevant parameters for this module for selection in the parameterization menu.

## Versions

The following expansion modules are available (shown from left to right in the figure on the left):

- 7KM PAC Switched Ethernet PROFINET expansion module
- 7KM PAC PROFIBUS DP expansion module
- 7KM PAC RS 485 expansion module
- 7KM PAC 4DI/2DO expansion module
- 7KM PAC I(N), I(Diff), analog expansion module

## Connection for 3VA molded case circuit breakers

The following expansion modules can also be mounted on the front of the COM800/COM100 breaker data servers of the 3VA molded case circuit breaker:

- 7KM PAC Switched Ethernet PROFINET and
- 7KM PAC PROFIBUS DP
- 7KM PAC RS 485

For further details see in the manual at <http://support.automation.siemens.com/WW/view/en/90318775>

## More information

For more information about the software components, see page 1/293 and on the internet at [www.siemens.com/lowvoltage/powermonitoring](http://www.siemens.com/lowvoltage/powermonitoring)

## 7KM PAC expansion modules

## 7KM PAC Switched Ethernet PROFINET expansion module

The 7KM PAC Switched Ethernet PROFINET expansion module is a plug-in communication module for 7KM PAC3200 and 7KM PAC4200 measuring devices and 3VA molded case circuit breakers.

It provides the following features:

- Standardized PROFINergy interface to the measured quantities
- The measured quantities can be individually selected using a GSDML file. This permits use of cost-effective S7 CPUs
- Easy parameter assignment using the device display or powerconfig or TIA Portal
- Integrated Ethernet switching allows networking with short cables without additional switches
- Direct integration in production machine networks using IRT (IRT = Isochronous-Real-Time)
- Full support of PROFINET IO (DHC, DNS, SNMP, SNTP)
- Device replacement without PG in the PROFINET assembly using LLDP
- Deterministic reversing time through ring redundancy (MRP)
- Modbus TCP communication
- Communication with powermanager or powerconfig
- 2 x Ethernet (RJ45) sockets
- Transmission rates 10 and 100 Mbit/s
- Protocols PROFINET IO, PROFINergy and Modbus TCP
- No external auxiliary power necessary
- Additional display via the device display and via LEDs on the module

All measured variables from 7KM PAC3200 and 7KM PAC4200 can be individually selected and cyclically transmitted by means of the GSDML file. This enables optimum use of the process image of the PROFINET controller, e.g. CPU 315-2 PN/DP of SIMATIC S7.

The measured quantities can be read out in acyclic mode using PROFINergy, a PNO protocol profile. Thanks to PROFINergy, it is possible to assemble a power monitoring system with devices from various manufacturers using PROFINET.

 <p><b>7KM PAC PROFIBUS DP expansion module</b></p> <p>The 7KM PAC PROFIBUS DP expansion module is a plug-in communication module for 7KM PAC3200 and 7KM PAC4200 measuring devices and 3VA molded case circuit breakers. The 7KM PAC PROFIBUS DP expansion module has the following features:</p> <ul style="list-style-type: none"> <li>• Plug-in communication module for measuring devices for connection to PROFIBUS DPV1</li> <li>• For 7KM PAC3200 and 7KM PAC4200</li> <li>• Easy parameter assignment using the device display or powerconfig or TIA Portal</li> <li>• Data can be transferred both cyclically and acyclically via PROFIBUS DPV1</li> <li>• Easy integration via device master data (GSD file) for other programming systems</li> <li>• Optimum use of process image of a control system for selection of individual measured quantities for cyclical transfer</li> <li>• Supports all baud rates from 9.6 kbit/s up to 12 Mbit/s</li> <li>• Connection through 9-pole Sub-D connector according to IEC 61158</li> <li>• No external auxiliary power necessary</li> <li>• Additional display via the device display and via LEDs on the module</li> </ul>	--	--	--	✓	✓	--	--	✓
 <p><b>7KM PAC RS 485 expansion module</b></p> <p>The 7KM PAC RS 485 expansion module has the following features:</p> <ul style="list-style-type: none"> <li>• Plug-in 7KM PAC RS 485 communication module for 7KM PAC3200 and 7KM PAC4200 measuring devices and 3VA molded case circuit breakers</li> <li>• Easy parameter assignment using the device display or powerconfig</li> <li>• Support for the Modbus RTU protocol</li> <li>• Plug and play</li> <li>• Supports transmission rates of 4.8/9.6/19.2 and 38.4 kbit/s</li> <li>• Connection by means of 6-pole screw terminals</li> <li>• No external auxiliary power necessary</li> <li>• Status indication by LED on the module</li> <li>• The 7KM PAC RS 485 expansion module is required for the gateway function of the 7KM PAC4200 for communication with simple devices with RS 485 interface, such as the 7KM PAC3100, via Ethernet (Modbus TCP).</li> </ul>	--	--	--	✓	✓	--	--	✓
 <p><b>7KM PAC 4DI/2DO expansion module</b></p> <p>The 7KM PAC 4DI/2DO expansion module is used to expand the 7KM PAC4200 measuring device to up to 10 digital inputs and 6 digital outputs and offers the following features:</p> <ul style="list-style-type: none"> <li>• Up to two 7KM PAC 4DI/2DO modules can be plugged onto a 7KM PAC4200.</li> <li>• The 7KM PAC 4DI/2DO expansion modules mean that the internal digital inputs and outputs can be expanded by up to 8 inputs and 4 outputs.</li> <li>• Easy parameter assignment using the device display or powerconfig</li> <li>• The digital inputs can be used without the need for an external power supply as they are self-powered. This is particularly useful for the integration of non-electric measuring devices, such as water or compressed-air counters</li> <li>• All functions of the integrated multifunctional inputs/outputs on the 7KM PAC4200 are also available in the 7KM PAC 4DI/2DO expansion module</li> <li>• Inputs and outputs can be used as an S0 interface conforming to IEC 62053-31</li> <li>• The connection is made via a 9-pole screw terminal</li> <li>• No external auxiliary power supply is required</li> </ul>	--	--	--	--	✓	--	--	--
 <p><b>7KM PAC I(N), I(Diff), analog expansion module</b></p> <p>The 7KM PAC I(N), I(Diff), analog expansion module adds the following features for 7KM PAC4200 and 7KM PAC3200 devices:</p> <ul style="list-style-type: none"> <li>• N-conductor measurement (IN), Class 1, in accordance with IEC 61557-12 via x/5A current transformers</li> <li>• Two analog inputs: The analog inputs can be used without an external voltage source via imposed direct currents from 0/4 to 20 mA. This is especially advantageous for measuring non-electrical quantities such as temperature, water or air pressure.</li> <li>• Residual current measurement: One of the two analog inputs can be used for residual current measurement via Type A or Type B summation current transformers.</li> <li>• Easy parameter assignment using the device display or powerconfig</li> <li>• The connection is made via a 6-pole screw terminal</li> <li>• One 7KM PAC I(N), I(Diff), analog module can be plugged onto a 7KM PAC4200 or 7KM PAC3200.</li> <li>• No external auxiliary power supply is required</li> </ul>	--	--	--	✓	✓	--	--	--

### Overview

3VA molded case circuit breakers from the portfolio of SENTRON protection, switching, measuring and monitoring devices ensure the reliable protection of people and property as integral components of efficient power distribution systems. With a wide range of accessories they can be adapted flexibly, quickly and easily to individual requirements.

### Spot Detector for Rail

#### Overview

##### **Spot Detector for Rail - based on High End Multi-Sensor DS1 024R-AT, DS1 110R-AT – Standard Base**

##### Sensor Technology:

- Multi criteria sensor (heat & smoke)
- Signal processing with ASAtechnology
- Highly developed immunity to deceptive phenomena
- Resistant to environmental and interfering influences such as dust, fibers, moisture, electromagnetic interference, corrosive vapors, artificial aerosols and atypical fire phenomena

##### Detector base designed for Rail Application:

- Rail base for standard ceiling installation
- Power supply 24 VDC or 110 VDC
- Alarm and Fault signaling via relay output
- 3 parameters selectable
- Stand-alone connectivity

##### Standards:

- Railway Applications EN 50155
- Extended temperature range OT4
- Requirements for fire behavior of materials and components EN 45545
- Fire detection and fire alarm systems EN 54
- Safety Integrity Level SIL2 acc. EN 5012x

##### **Spot Detector for Rail - based on High End Multi-Sensor DS2 024R-AT, DS2 110R-AT – Connector Base**

##### Sensor Technology:

- Multi criteria sensor (heat & smoke)
- Signal processing with ASAtechnology
- Highly developed immunity to deceptive phenomena
- Resistant to environmental and interfering influences such as dust, fibers, moisture, electromagnetic interference, corrosive vapors, artificial aerosols and atypical fire phenomena

##### Detector base designed for Rail Application:

- Rail base with external industry standard plug
- Plug & Play solution
- Power supply 24 VDC or 110 VDC
- Alarm and Fault signaling via relay output
- 3 parameters selectable
- Stand-alone connectivity

##### Standards:

- Railway Applications EN 50155
- Extended temperature range OT4
- Requirements for fire behavior of materials and components EN 45545
- Fire detection and fire alarm systems EN 54
- Safety Integrity Level SIL2 acc. EN 5012x

**Spot Detector for Rail - based on High End Multi-Sensor**  
**DSW 024R-AT, DSW 110R-AT – Wet Base**

Sensor Technology:

- Multi criteria sensor (heat & smoke)
- Signal processing with ASAtechnology
- Highly developed immunity to deceptive phenomena
- Resistant to environmental and interfering influences such as dust, fibers, moisture, electromagnetic interference, corrosive vapors, artificial aerosols and atypical fire phenomena

Detector base designed for Rail Application:

- Solution for rough environmental conditions
- Rail base with external industry standard plug
- Plug & Play solution
- Power supply 24 VDC or 110 VDC
- Alarm and Fault signaling via relay output
- 3 parameters selectable
- Stand-alone connectivity

Standards:

- Railway Applications EN 50155
- Extended temperature range OT4
- Requirements for fire behavior of materials and components EN 45545
- Fire detection and fire alarm systems EN 54
- Safety Integrity Level SIL2 acc. EN 5012x

**Spot Detector for Rail - based on Smoke-only Sensor**  
**DSWOP 024R-AT, DSWOP 110R-AT – Wet Base**

Sensor Technology:

- Single criteria sensor (smoke)
- Signal processing with detection algorithm
- 3-color LED indicator
- Drift compensation and internal error monitoring

Detector base designed for Rail Application:

- Solution for rough environmental conditions
- Rail base with external industry standard plug
- Plug & Play solution
- Power supply 24 VDC or 110 VDC
- Alarm and Fault signaling via relay output
- 2 parameters selectable
- Stand-alone connectivity

Standards:

- Railway Applications EN 50155
- Extended temperature range OT4
- Requirements for fire behavior of materials and components EN 45545
- Fire detection and fire alarm systems EN 54

## Fire protection for rolling stock Fire Safety Application Center

### Aspiration Smoke Detection for Rail

#### Overview

##### **Aspiration smoke detection for Rail**

##### Designed for Rail Application:

- Power supply 24 VDC
- Stand-alone connectivity
- Alarm and Fault signaling via relay output
- Variation of selectable parameter settings to meet all project specific requirements
- Fast start-up and configuration sequence

##### Standards:

- Railway Applications EN 50155
- Extended temperature range OT4
- Requirements for fire behavior of materials and components EN 45545
- Fire detection and fire alarm systems EN 54
- SIL 2 according EN 50126/128/129

##### Further Fire Safety applications

<https://new.siemens.com/global/en/products/buildings/fire-safety/applications.html>

##### Sensor Technology:

- Patented technology
- Early detection of a wide spectrum of particle size in the air
- Configuration using the USB interface
- ASD Asyst-Tool' software to assist with pipe configuration
- Unique dust-resistant detection chamber
- Intuitive front indicator for airflow and smoke value
- Access to service functions
- Different event protocols
- Offline/Online configuration supported
- Cleaning function (FDA241)

## Damper actuators for rail vehicles

5/2

OpenAir fits everywhere

## Damper actuators for rail vehicles

### OpenAir fits everywhere

#### Overview

##### **Certified, reliable, space-saving**

The challenge: harsh environmental and operating conditions.

Air conditioning units and air distribution systems in rail vehicle applications must ensure passenger comfort at all times. These systems are subject to special conditions: vibrations, extreme temperature fluctuations, special safety and fire protection regulations and confined spaces. To accomplish their task under these demanding conditions, they must have components that are precisely tailored to applications in rail vehicles. All components and materials must be certified in accordance with application-specific standards, must function reliably under harsh conditions and must be as compact as possible.

More information see [www.siemens.com/openair](http://www.siemens.com/openair)

##### Highlights

- All standards are met
- New extended voltage range (110 V/24 V)
- More safety due to Actuators with spring return function
- Compact design due to integrated auxiliary switches

Relevant standards for the certification of damper actuators:

- EN 50155 - Electronic equipment used on rolling stock
- EN 45545 - Fire protection on railway vehicles (interior applications)
- EN 61373 - Shock and vibration, railway applications

#### Selection and ordering data

##### **Air damper actuators with spring return**

Actuators for rail vehicles	Control signal	Operating voltage	Standard model	Feedback potentiometer	2 integrated auxiliary switches	Rotary direction switch

**The solution: OpenAir damper actuators**

With OpenAir, we offer you technically perfected damper actuators that can be **used the world over** and meet all the requisite standards (EN 45545, EN 50155, EN 61373) for use in rail vehicles - certified and documented, of course. These rugged devices with a tested service life of up to 100.000 full cycles and 5.000.000 partial cycles are available with 5 and 10(8) Nm of torque and running times of 30 and 90 seconds. You benefit from loadindependent running times thanks to robust, brushless DC (BLDC) motors and an extremely low sound power level of <28 dB(A).

**Easy and safe in any area**

The halogen-free printed circuit boards completely covered with a protective coating and the extremely wide temperature operating range (from -40 to +70 °C; short-term +85 °C) ensure maximum reliability and flexibility. The housings are also extremely compact because the two auxiliary switches for indicating damper position are integrated. Installation is with a single screw and the direction of rotation to be instantly adapted thanks to a rotary direction switch. To make your work easier, the actuators come preassembled with the plug of your choice and you also choose the length of the railway-specific, halogen-free connecting cables. For safety-relevant applications, damper actuators with spring return function are now also available. These are required when air dampers have to be moved to an emergency position in the event of a power failure.

**Where's the datasheet?**

EA question that never needs asking again. With the Scan to HIT app, you can simply scan in the data matrix code on the actuators and immediately obtain access to all important product information such as datasheets and installation instructions. The app is available free of charge for iOS and Android in the corresponding stores.

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL standard CPUs

**SIPLUS S7-1200 CPU 1212C RAIL****Overview**

- The superior compact solution
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- With 14 integral input/outputs
- Expandable by:
  - 1 signal board (SB) or communication board (CB)
  - 2 signal modules (SM)
  - Max. 3 communications modules (CM)

**Design**

The compact CPU 1212C has:

- Integrated power supply, either as wide-range AC or DC power supply (24 V DC).
- Integrated 24 V encoder/load current supply: For direct connection of sensors and encoders. With 300 mA output current also for use as load power supply.
- 8 integrated digital inputs 24 V DC (current sinking/current sourcing (IEC type 1 current sinking)).
- 6 integrated digital outputs, 24 V DC.
- 2 integrated analog inputs 0 ... 10 V.
- 2 pulse outputs (PTO) with a frequency of up to 100 MHz.
- Pulse-width modulated outputs (PWM) with a frequency of up to 100 kHz.
- Integrated Ethernet interface (TCP/IP native, ISO-on-TCP).
- 4 fast counters (3 with max. 100 kHz; 1 with max. 30 kHz), with configurable enable and reset inputs, can be used simultaneously as up and down counters with 2 separate inputs or for connecting incremental encoders.
- Expansion by additional communication interfaces, e.g. RS485 or RS232.
- Expansion by analog or digital signals directly on the CPU via signal board (with retention of CPU mounting dimensions).
- Expansion by a wide range of analog and digital input and output signals via signal modules.
- Optional memory expansion (SIMATIC Memory Card).
- PID controller with auto-tuning functionality.
- Integral real-time clock.
- Interrupt inputs: For extremely fast response to rising or falling edges of process signals.
- Removable terminals on all modules.
- Simulator (optional): For simulating the integrated inputs and for testing the user program.

**Function**

- Comprehensive instruction set: A wide range of operations facilitates programming:
  - Basic operations such as binary logic operations, result allocation, save, count, create times, load, transfer, compare, shift, rotate, create complement, call subprogram (with local variables),
  - integral communication commands (e.g. USS protocol, Modbus RTU, S7 communication "T-Send/T-Receive" or Freeport),
  - user-friendly functions such as pulse-width modulation, pulse sequence function, arithmetic functions, floating point arithmetic, PID closed-loop control, jump functions, loop functions and code conversions,
  - mathematical functions, e.g. SIN, COS, TAN, LN, EXP.
- Counting: User-friendly counting functions in conjunction with integrated counters and special commands for high-speed counters open up new application areas for the user.
- Interrupt processing:
  - Edge-triggered interrupts (activated by rising or falling edges of process signals on interrupt inputs) support a rapid response to process events.
  - Time-triggered interrupts.
  - Counter interrupts can be triggered when a setpoint is reached or when the direction of counting changes.
  - Communication interrupts allow the rapid and easy exchange of information with peripheral devices such as printers or bar code readers.
- Password protection
- Test and diagnostics functions: Easy-to-use functions support testing and diagnostics, e.g. online/offline diagnostics.
- "Forcing" of inputs and outputs during testing and diagnostics: Inputs and outputs can be set independently of the cycle and thus permanently, for example, to test the user program.
- Motion Control in accordance with PLCopen for simple control of movement
- Library functionality

**Programming**

The STEP 7 Basic programming package permits complete programming of all S7-1200 controllers and the associated I/O.

**SIPLUS RAIL**

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL standard CPUs

**SIPLUS S7-1200 CPU 1214C RAIL****Overview**

- The compact high-performance CPU
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- With 24 integrated I/Os
- Expandable by:
  - 1 signal board (SB) or communication board (CB)
  - 8 signal modules (SM)
  - Max. 3 communications modules (CM)

**Design**

The compact CPU 1214C has:

- Integrated power supply, either as wide-range AC or DC power supply (24 V DC).
- Integrated 24 V encoder/load current supply: For direct connection of sensors and encoders. With a 400 mA output current, it can also be used as load power supply.
- 14 integrated digital inputs 24 V DC (current sinking/current sourcing (IEC type 1 current sinking)).
- 10 integrated digital outputs, 24 V DC.
- 2 integrated analog inputs 0 ... 10 V.
- 2 pulse outputs (PTO) with a frequency of up to 100 MHz.
- Pulse-width modulated outputs (PWM) with a frequency of up to 100 kHz.
- Integrated Ethernet interface (TCP/IP native, ISO-on-TCP).
- 6 high-speed counters (3 with max. 100 kHz; 3 with max. 30 kHz), with configurable enable and reset inputs, can be used simultaneously as up and down counters with 2 separate inputs or for connecting incremental encoders.
- Expansion by additional communication interfaces, e.g. RS485 or RS232.
- Expansion by analog or digital signals directly on the CPU via signal board (with retention of CPU mounting dimensions).
- Expansion by a wide range of analog and digital input and output signals via signal modules.
- Optional memory expansion (SIMATIC Memory Card).
- PID controller with auto-tuning functionality.
- Integral real-time clock.
- Interrupt inputs: For extremely fast response to rising or falling edges of process signals.
- Removable terminals on all modules.
- Simulator (optional): For simulating the integrated inputs and for testing the user program.

**Function**

- Comprehensive instruction set: A wide range of operations facilitates programming:
  - Basic operations such as binary logic operations, result allocation, save, count, create times, load, transfer, compare, shift, rotate, create complement, call subprogram (with local variables),
  - Integral communication commands (e.g. USS protocol, Modbus RTU, S7 communication "T-Send/T-Receive" or Freeport),
  - user-friendly functions such as pulse-width modulation, pulse sequence function, arithmetic functions, floating point arithmetic, PID closed-loop control, jump functions, loop functions and code conversions,
  - mathematical functions, e.g. SIN, COS, TAN, LN, EXP.
- Counting: User-friendly counting functions in conjunction with integrated counters and special commands for high-speed counters open up new application areas for the user.
- Interrupt processing:
  - Edge-triggered interrupts (activated by rising or falling edges of process signals on interrupt inputs) support a rapid response to process events.
  - Time-triggered interrupts.
  - Counter interrupts can be triggered when a setpoint is reached or when the direction of counting changes.
  - Communication interrupts allow the rapid and easy exchange of information with peripheral devices such as printers or bar code readers.
- Password protection
- Test and diagnostics functions: Easy-to-use functions support testing and diagnostics, e.g. online/offline diagnostics.
- "Forcing" of inputs and outputs during testing and diagnostics: Inputs and outputs can be set independently of the cycle and thus permanently, for example, to test the user program.
- Motion Control in accordance with PLCopen for simple control of movement.
- Library functionality

**Programming**

The STEP 7 Basic programming package permits complete programming of all S7-1200 controllers and the associated I/O.

**SIPLUS RAIL**

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL digital modules

**SIPLUS S7-1200 SM 1221 RAIL****Overview**

- Digital inputs as supplement to the integral I/O of the CPUs
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For flexible adaptation of the controller to the corresponding task
- For subsequent expansion of the system with additional inputs

**Application**

Digital input modules allow the connection of the controller to digital signals of the process.

This provides users with the following advantages:

- Optimum adaptation: with signal modules which can be mixed as desired, users can adapt their controllers exactly to the relevant task. This avoids superfluous investments.
- Flexibility: if the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

**Function**

The SM 1221 digital input signal modules convert the level of the external digital signals from the process into the internal signal level of the S7-1200.

6

#### Selection and ordering data

Version	Article No.
<b>SIPLUS SM 1221 RAIL digital input module</b> Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic 8 inputs, 24 V DC, isolated, current sourcing/sinking • For areas with extreme exposure to environmental substances (conformal coating); ambient temperature -25 ... +70 °C	<b>6AG2221-1BF32-1XB0</b>

## Overview

- Digital outputs as a supplement to the integral I/O of the CPUs
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For flexible adaptation of the controller to the corresponding task
- For subsequent expansion of the system with additional outputs

## Application

Digital output modules permit the output of digital signals from the controller to the process.

This provides users with the following advantages:

- Optimum adaptation: with signal modules which can be mixed as desired, users can adapt their controllers exactly to the relevant task. This avoids superfluous investments.
- Flexibility: if the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

## Function

The SM 1222 digital output signal modules convert the internal signal level of the SIMATIC S7-1200 into the external signal level required by the process.

# SIPLUS RAIL

## SIPLUS S7-1200 RAIL

### SIPLUS extreme RAIL digital modules

#### SIPLUS S7-1200 SM 1223 RAIL

#### Overview

- Digital inputs and outputs as supplement to the integral I/O of the CPUs
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For flexible adaptation of the controller to the corresponding task
- For subsequent expansion of the system with additional inputs and outputs

#### Application

Digital input/output modules permit:

- Connection of the controller to digital signals of the process
- Output of digital signals from the controller to the process.

This provides users with the following advantages:

- Optimum adaptation:  
with signal modules which can be mixed as desired, users can adapt their controllers exactly to the relevant task. This avoids superfluous investments. Modules with 8 and 16 input/output channels are available.
- Flexibility:  
if the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

#### Function

The SM 1223 digital input/output signal modules convert

- the level of the external digital signals from the process into the internal signal level of the S7-1200 and
- the internal signal level of the S7-1200 into the external signal level required by the process.

# SIPLUS RAIL

## SIPLUS S7-1200 RAIL

### SIPLUS extreme RAIL digital modules

#### SIPLUS S7-1200 SB 1223 RAIL

#### Overview

- Digital inputs and outputs as supplement to the integral I/O of the SIPLUS S7-1200-CPU's
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- Can be plugged directly into the CPU

#### Application

The SB 1223 digital input/output signal board permits:

- Connection of the controller to digital signals of the process
- Output of digital signals from the controller to the process.

#### Design

The signal boards are plugged directly into the receptacle on the front of each S7-1200 CPU.

- Mounting:  
Signal boards are plugged directly into the SIMATIC S7-1200 CPU and are thus electrically and mechanically connected to the CPU
- The CPU mounting dimensions remain unchanged
- All signal boards are easy to replace thanks to removable connecting terminals ("independent wiring")

#### Function

The SB 1223 digital input/output signal board converts

- the level of the external digital signals from the process into the internal signal level of the S7-1200 and
- the internal signal level of the S7-1200 into the external signal level required by the process

#### Technical specifications

Article number	<b>6AG2223-0BD30-1XB0</b> SIPLUS S7-1200 SB 1223 2DI/2DO RAIL
<b>General information</b>	
Product type designation	SB 1223, DI 2x24 V DC/DQ 2x24 V DC
Engineering with	see entry ID: 109746275
<b>Input current</b>	
From backplane bus 5 V DC, typ.	50 mA
<b>Output voltage / header</b>	
supply voltage of the transmitters / header	4 mA; per channel
<b>Digital inputs</b>	
Number of digital inputs	2; Current-sinking
• in groups of	1
Input characteristic curve in accordance with IEC 61131, type 1	Yes
Number of simultaneously controllable inputs	2
• all mounting positions	
- up to 40 °C, max.	
Input voltage	DC
• Type of input voltage	24 V
• Rated value (DC)	0 to 5 V
• for signal "0"	+15 to +30 V
• for signal "1"	
Input current	1 mA
• for signal "0", max. (permissible quiescent current)	0.5 A
• for signal "1", typ.	
Input delay (for rated value of input voltage)	Yes; 0.2 ms, 0.4 ms, 0.8 ms, 1.6 ms, 3.2 ms, 6.4 ms and 12.8 ms, selectable in groups of four
• for standard inputs	
- parameterizable	
• for interrupt inputs	Yes
- parameterizable	
• for technological functions	Yes
- parameterizable	
<b>Digital outputs</b>	
Number of digital outputs	2; MOSFET, solid-state (current-sinking/current-sourcing)
• in groups of	1
Short-circuit protection	No
Switching capacity of the outputs	0.5 A
• with resistive load, max.	5 W
• on lamp load, max.	
Load resistance range	0.6 Ω
• upper limit

**SIPLUS RAIL**  
 SIPLUS S7-1200 RAIL  
 SIPLUS extreme RAIL digital modules

**SIPLUS S7-1200 SB 1223 RAIL**

**Selection and ordering data**

Version	Article No.
<p><b>SIPLUS SB 1223 RAIL digital input/output signal board</b>            Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic            2 inputs, 24 V DC, IEC type 1 current sinking;            2 transistor outputs 24 V DC, 0.5 A, 5 W;            can be used as HSC at up to 30 kHz</p> <p>For areas with extreme exposure to environmental substances (conformal coating);            ambient temperature -25 ... +70 °C</p>	<p><b>6AG2223-0BD30-1XB0</b></p>

**Overview**

- For the convenient recording of temperatures with great accuracy
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- 4 inputs
- Most popular resistance temperature detectors can be used
- Can easily be retrofitted to existing plant

**Application**

The SM 1231 RTD modules enable temperatures to be measured with high precision using established resistance temperature detectors. They can be used with CPU 1211, 1212 and 1214.

**Design**

The SM 1231 RTD modules exhibit the same structural features as the other modules of the S7-1200 series:

- Mounting on a DIN rail:  
The modules are snapped onto the rail just to the right of the CPU and connected to one another and with the CPU 12xx by means of the integral backplane bus.

- Direct mounting:  
Drilled holes permit the module to be bolted directly to walls. This type of mounting is recommended for applications subject to strong vibrations.
- Resistance temperature detectors:  
The most popular resistance temperature detectors can be used: Pt 100, Pt 200, Pt 500, Pt 1000, Pt 10000, Ni 100, Ni 120, Ni 1000, Cu 10, FS 150, FS 30, FS 600. They are connected directly to the module without amplifiers and all RTDs must be of the same type. The detectors can be connected with 2, 3 or 4 cables.
- Mounting location:  
For maximum possible measurement and repeat accuracy, the RTD module should be mounted in locations with low temperature variations.
- DIP switches:  
Required settings, e.g. selection of the connected RTDs, should be made using the DIP switches on the module.

**Function**

- Different measurement ranges:  
Resistance temperature detectors of types Pt 100, Pt 200, Pt 500, Pt 1000, Pt 10000, Ni 100, Ni 120, Ni 1000, Cu 10, FS 150, FS 30, FS 600.
- Temperature scaling:  
The measured temperature can be shown in °C or °F.

**SIPLUS RAIL**

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL analog modules

**SIPLUS extreme S7-1200 SM 1232 RAIL****Overview**

- Analog outputs for SIPLUS S7-1200
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- With extremely short conversion times
- For connecting analog actuators without additional amplifiers
- Even solves more complex automation tasks

This provides users with the following advantages:

- **Optimal adaptation:**  
With analog signal modules, users can optimally adapt their controllers even to more complex tasks.
- **Direct connection of actuators:**  
up to 14 bit resolution permit the connection of actuators without an additional amplifier.
- **Flexibility:**  
if the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

**Design**

The signal modules have the same design features as the basic devices.

- **Installation on DIN rails:**  
The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.
- **Direct installation:**  
Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.

**Function**

SM 1232 analog output signal modules convert digital signals of the SIMATIC S7-1200 into signals for controlling the respective process.

6

**Application**

SM 1232 analog output signal modules permit the use of analog outputs.

**Technical specifications**

Version	Article No.
<b>Analog output SIPLUS signal module SM 1232 RAIL</b> Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic 4 analog outputs, $\pm 10$ V with 14 bits or 0 ... 20 mA with 13 bits For areas subject to exceptional medial exposure (conformal coating); ambient temperature range -25 ... +60 °C	<b>6AG2232-4HD32-1XB0</b>

**Overview**

- Analog inputs and outputs for SIPLUS S7-1200
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- With extremely short conversion times
- For connecting analog actuators and sensors without additional amplifiers
- Even solves more complex automation tasks
- From +60 °C to +70 °C, max. 50% of the inputs and outputs can be controlled simultaneously

**Application**

SM 1234 analog input/outputs permit the use of analog inputs/outputs.

This provides users with the following advantages:

- **Optimal adaptation:**  
With analog and digital expansion modules, users can optimally match their controllers even to more complex tasks.
- **Direct connection of sensors and actuators:**  
up to 14 bit resolution plus sign and different input/output ranges permit the connection of sensors and actuators without an additional amplifier.
- **Flexibility:**  
if the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.

**Design**

The SM 1234 analog input/output signal modules have the same design features as the basic devices.

- **Installation on DIN rails:**  
The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.
- **Direct installation:**  
Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.

**Function**

The SM 1234 analog input/output signal modules

- convert analog signals from the process into digital signals for internal processing by the SIMATIC S7-1200.
- convert digital signals of the SIMATIC S7-1200 into signals for controlling the respective process.

# SIPLUS RAIL

## SIPLUS S7-1200 RAIL

### SIPLUS extreme RAIL communication

#### SIPLUS S7-1200 CM 1241 RAIL

##### Overview

- For fast, high-performance serial data exchange via point-to-point connection
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Implemented protocols: ASCII, USS drive protocol, Modbus RTU
- Additional protocols can be loaded later
- Simple parameterization with STEP 7 Basic

##### Application

The CM 1241 communications modules are used for quick, high-performance serial data exchange via point-to-point connection.

Point-to-point connection is possible to, e.g.:

- SIMATIC S7 automation systems and the systems of many other manufacturers
- Printers
- Robot controls
- Modems
- Scanners
- Bar code readers, etc.

##### Design

The CM 1241 communications modules have the same design features as the basic devices.

- Installation on DIN rails:  
The modules are snapped onto the rail next to the CPU on the right and are electrically and mechanically connected to each other and to the CPU by the integral slide mechanism.
- Direct installation:  
Horizontal or vertical mounting on DIN rail or direct mounting in the cabinet using integral lugs.

The communications modules are equipped with the following:

- Status LEDs for indicating “Send”, “Receive” and “Error”
- Communication interface:  
available for the RS232 or RS422/485 physical transmission properties

##### Function

The following standard protocols are available on the CM 1241 communications modules:

- ASCII:  
For interfacing to third-party systems with simple transmission protocols, e.g. protocols with start and end characters or with block check characters. The interface handshake signals can be called and controlled via the user program.
- Modbus:  
For communication according to the Modbus protocol with RTU format:
  - Modbus Master:  
Master-slave interfacing with SIMATIC S7 as master.
  - Modbus slave:  
master-slave interfacing with SIMATIC S7 as slave; message frame traffic from slave to slave not possible.
- USS drive protocol:  
instructions for connection of USS protocol drives are especially supported. In this case, drives exchange data over RS485. It is then possible to control these drives, and to read and write parameters.

Further drivers for downloading are also available.

##### Parameterization

Parameterization of the CM 1241 communications module is particularly user-friendly and simple with STEP 7 Basic:

- The user assigns the module characteristics via a parameterization environment integrated in STEP 7 Basic, e.g.:
  - The implemented protocol drivers that are used.
  - The driver-specific characteristics that are used.

#### Selection and ordering data

Version	Article No.
<b>SIPLUS S7-1200 CM1241 RS232 T1 RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic	<b>6AG2241-1AH32-1XB0</b>
<b>SIPLUS S7-1200 CM1241 RS422/485 T1 RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic	<b>6AG2241-1CH32-1XB0</b>

### Overview

- For fast, high-performance serial data exchange via point-to-point connection
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Implemented protocols: ASCII, USS drive protocol, Modbus RTU
- Additional protocols can be loaded later
- Simple parameterization with STEP 7 Basic
- Can be plugged directly into the CPU

### Application

The Communication Board CB 1241 RS 485 is used for fast, high-performance serial data exchange via point-to-point connections.

Point-to-point coupling is possible, for example, to:

- SIMATIC S7 automation systems and systems of many other manufacturers
- Printers
- Robot controls
- Modems
- Scanners
- Bar code readers, etc.

The Communication Board CB 1241 RS 485 can be plugged directly into all SIMATIC S7-1200 CPUs.

This provides users with the following advantages:

- **Optimal adaptation:**  
With communication boards, users can optimally adapt their controllers even to more complex tasks.
- **Flexibility:**  
If the task is expanded subsequently, the controller can be upgraded. Updating of the user program is extremely simple.
- **Use where space is limited:**  
The communication boards are directly plugged into the CPU, enabling the controller to be expanded without taking up any additional space.

### Design

The communication boards are plugged straight into the holder on the front of the S7-1200 CPU.

- **Installation:**  
Communication boards are plugged directly into the SIPLUS extreme S7-1200 RAIL-CPU, and are thus connected electrically and mechanically with the CPU.
- The installation dimensions of the CPU remain unchanged.
- Replacement of all communication boards is facilitated by removable terminals ("permanent wiring").

### Function

On the Communication Board CB 1241 RS 485, the following standard protocols are available:

- **ASCII:**  
For interfacing to third-party systems with simple transmission protocols, e.g. protocols with start and end characters or with block check characters. The interface handshake signals can be queried and controlled via the user program.
- **Modbus:**  
For communication according to the Modbus protocol with RTU format:
  - Modbus Master:  
Master-slave interfacing with SIMATIC S7 as master.
  - Modbus slave:  
Master-slave interfacing with SIMATIC S7 as slave; message frame traffic from slave to slave not possible.
- **USS drive protocol:**  
Instructions for connection of USS protocol drives are specifically supported. In this case, drives exchange data over RS485. It is then possible to control these drives, and to read and write parameters.

Additional drivers can also be downloaded.

### Parameterization

The parameterization of the Communication Board CB 1241 is particularly user-friendly and simple with STEP 7 Basic:

The user specifies the properties of the module by means of a parameterization environment integrated into STEP 7 Basic.

#### Technical specifications

Article number	<b>6AG2241-1CH30-1XB0</b> SIPLUS S7-1200 CB 1241 RS485 T1 RAIL
<b>General information</b>	
<b>Product type designation</b>	CB 1241 RS 485
<b>Input current</b>	
<b>from backplane bus 5 V DC, typ.</b>	50 mA
<b>Interfaces</b>	
<b>Point-to-point connection</b>	
• Cable length, max.	1 000 m
<b>Integrated protocol driver</b>	
• Freepoint	Yes
• ASCII	Yes; Available as library function
• Modbus RTU master	Yes
• MODBUS RTU slave	Yes
• USS	Yes; Available as library function
<b>Protocols</b>	
<b>Integrated protocols</b>	
• Freepoint	
- Telegram length, max.	1 kbyte
- Bits per character	7 or 8
- Number of stop bits	1 (Standard), 2
- Parity	No parity (standard); even, uneven, mark (parity bit always 1); space (parity bit always 0)
• 3964 (R)	
- Telegram length, max.	1 kbyte
- Bits per character	7 or 8
- Number of stop bits	1 (Standard), 2
- Parity	No parity (standard); even, uneven, mark (parity bit always 1); space (parity bit always 0)
• Modbus RTU master	
- Address area	1 through 49 999 (Standard Modbus addressing)
- Number of slaves, max.	247; slave numbers 1 through 247, per MODBUS network segment maximum 32 devices, additional repeaters needed to expand the network to maximum configuration
• MODBUS RTU slave	
- Address area	1 through 49 999 (Standard Modbus addressing)
<b>Interrupts/diagnostics/status information</b>	
<b>Diagnostics function</b>	Yes
<b>Degree and class of protection</b>	
<b>IP degree of protection</b>	IP20
<b>Standards, approvals, certificates</b>	
<b>Railway application</b>	
• EN 50121-3-2	Yes; EMC for rail vehicles
• EN 50121-4	Yes; EMC for signal and telecommunications systems
• EN 50124-1	Yes; Railway applications - overvoltage category OV2; pollution degree PD2; rated surge voltage UNi = 0.5 kV; UNm = 24 V DC
• EN 50125-1	Yes; Rail vehicles - see ambient conditions
• EN 50125-2	Yes; Stationary electrical equipment - see ambient conditions
• EN 50125-3	Yes; Signal and telecommunications systems - see ambient conditions; vibrations and shocks: Application point outside of tracks (1 m to 3 m away from track)
• EN 50155	Yes; Rail vehicles - temperature class OT1, ST1/ST2, horizontal mounting position
• EN 61373	Yes; Rail vehicles - vibrations and shocks: Category 1 Class A/B
• Fire protection acc. to EN 45545-2	Yes; For proof of conformity, see Service & Support
<b>Ambient conditions</b>	
<b>Ambient temperature during operation</b>	
• min.	-25 °C; = Tmin (incl. condensation/frost)
• max.	60 °C; = Tmax; +70 °C for 10 min (OT1, ST1/ST2 acc. to EN 50155)
<b>Altitude during operation relating to sea level</b>	
• Installation altitude above sea level, max.	2 000 m
• Ambient air temperature-barometric pressure-altitude	Tmin ... Tmax at 1 140 hPa ... 795 hPa (-1 000 m ... +2 000 m)
<b>Relative humidity</b>	
• With condensation, tested in accordance with IEC 60068-2-38, max.	100 %; RH incl. condensation / frost (no commissioning in bedewed state), horizontal installation

### Selection and ordering data

Version	Article No.
<b>SIPLUS CB 1241 communication board RS 485 RAIL</b> Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic for point-to-point connection, with 1 RS 485 interface	<b>6AG2241-1CH30-1XB0</b>

**SIPLUS RAIL**

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL communication

**SIPLUS S7-1200 CM 1242-5 RAIL****Overview**

DP-M	DP-S	FMS	PG/OP	S7
	●			

The SIPLUS S7-1200 CM 1242-5 RAIL communication module is used to connect a SIPLUS extreme RAIL S7-1200 to PROFIBUS as a DP slave and has the following characteristics:

- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- PROFIBUS DPV1 slave in accordance with IEC 61158
- Module replacement without PG supported
- Power is supplied via the backplane bus so that no extra cabling is required
- Support of all standard baud rates from 9.6 Kbps to 12 Mbps
- Compact industry-standard enclosure in S7-1200 design for mounting on a DIN rail
- Fast commissioning thanks to easy configuration using STEP 7 without additional programming overhead

The SIPLUS S7-1200 CM 1242-5 RAIL is intended for use in rail traffic. Low-cost PROFIBUS-based automation solutions can be created on the basis of the S7-1200.

**Benefits**

PROFIBUS-based systems can be operated effectively for lower operating and maintenance costs:

- Low costs since an automation solution requires no fixed wiring and less hardware
- Fast response to faults thanks to comprehensive diagnostics options
- Optimized plant and inventory management

The SIPLUS S7-1200 CM 1242-5 RAIL also offers further benefits especially for the requirements of micro-automation solutions:

- Uncomplicated connection of the S7-1200 to PROFIBUS without extra power supply
- Low-cost implementation of automation solutions based on PROFIBUS
- Fast commissioning, as no programming overhead is required

**Application**

The SIPLUS S7-1200 CM 1242-5 RAIL is designed for use in rail traffic.

With the CM 1242-5 RAIL, low-cost, distributed automation solutions can be implemented on the basis of the S7-1200, or in simple cases even complete plant automation systems.

**Design**

The SIPLUS S7-1200 CM 1242-5 RAIL offers all the benefits of the S7-1200 design.

- Rugged, compact plastic enclosure
- Easily accessible connection and diagnostics elements, protected by front flaps
- Removable terminals
- Simple mounting on the mounting rail of the S7-1200
- 9-pin sub-D socket for the bus interface to PROFIBUS

The CM 1242-5 RAIL is plugged into the left-hand system bus interface of the S7-1200. Power is supplied via the system bus of the S7-1200 so that no extra cabling is required. The rugged RS485 interface is located on the underside of the module, protected by the lower front flap.

**Function**

The SIPLUS S7-1200 CM 1242-5 RAIL provides the communication services for integrating an S7-1200 into an automation solution as a PROFIBUS DP slave.

**PROFIBUS DP slave**

The CM 1242-5 RAIL works as a DPV1 slave in accordance with IEC 61158, handles data traffic completely autonomously, and thus relieves the CPU of communication tasks.

The data areas of the distributed I/Os are transferred consistently between CP and CPU.

**Diagnostics**

Extensive diagnostic options are available via STEP 7, including

- Operating status of the CM
- General diagnostics functions
- Connection diagnostics
- Alarm buffer

STEP 7 Basic is required for configuring the full functional scope of the CM 1242-5.

## Overview

DP-M	DP-S	FMS	PG/OP	S7
●			●	●

The SIPLUS S7-1200 CM 1243-5 RAIL communication module is used to connect a SIPLUS extreme RAIL S7-1200 to PROFIBUS as a DP master and has the following characteristics:

- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- PROFIBUS DPV1 master in accordance with IEC 61158
- Support of up to 16 PROFIBUS DP slaves
- Communication with other S7 controllers based on S7 communication
- Allows the connection of programming devices and operator panels with a PROFIBUS interface to the S7-1200
- Module replacement without PG supported
- Support of all standard baud rates from 9.6 Kbps to 12 Mbps
- Compact industry-standard enclosure in S7-1200 design for mounting on a DIN rail
- Fast commissioning thanks to easy configuration using STEP 7 without additional programming overhead

The SIPLUS S7-1200 CM 1243-5 RAIL is intended for use in rail traffic. Low-cost PROFIBUS-based automation solutions can be created on the basis of the S7-1200 for optimal production.

## Benefits

PROFIBUS-based systems can be operated effectively for lower operating and maintenance costs:

- Low costs since an automation solution requires no fixed wiring and less hardware
- Fast response to faults thanks to excellent diagnostics options
- Optimized plant and inventory management

The SIPLUS S7-1200 CM 1243-5 RAIL also offers further benefits especially for the requirements of micro-automation solutions:

- Uncomplicated connection of the S7-1200 to PROFIBUS
- Low-cost implementation of automation solutions based on PROFIBUS
- Fast commissioning, as no programming overhead is required

Use of PROFIBUS-based micro-automation solutions enables optimal operation of the plant.

## Application

The SIPLUS S7-1200 CM 1243-5 RAIL is designed for use in rail traffic.

With the CM 1243-5 RAIL, low-cost, distributed automation solutions can be implemented on the basis of the S7-1200, or in simple cases even complete plant automation systems. It can be used in all sectors of discrete automation.

## Design

The SIPLUS S7-1200 CM 1243-5 RAIL offers all the benefits of the S7-1200 design.

- Rugged, compact plastic enclosure
- Easily accessible connection and diagnostics elements, protected by front flaps
- Removable terminals
- Simple mounting on the mounting rail of the S7-1200
- 9-pin sub-D socket for the bus interface to PROFIBUS
- 3-pin plug-in terminal strip for connection of the 24 V DC external supply voltage

The CM 1243-5 RAIL is plugged into the left-hand system bus interface of the S7-1200. The power is supplied via a 3-pin terminal strip on top of the module. The rugged RS485 interface is located on the underside of the module, protected by the lower front flap.

**SIPLUS RAIL**

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL communication

**SIPLUS S7-1200 CM 1243-5 RAIL****Function**

The SIPLUS S7-1200 CM 1243-5 RAIL provides access to different communication services on the basis of PROFIBUS:

- PROFIBUS DP (according to IEC 61158, master)
- PG/OP communication
- S7 communication

**PROFIBUS DP master**

The CM 1243-5 RAIL works as a DP-V1 master in accordance with IEC 61158, handles data traffic completely autonomously, and thus relieves the CPU of communication tasks.

The data areas of the distributed I/Os are transferred consistently between CP and CPU. As a DP master, it allows the connection of up to 16 PROFIBUS-compliant DP slaves

**PG/OP communication**

The S7-1200 to which the CM 1243-5 RAIL is connected can be programmed with the help of PG/OP communication.

**S7 communication**

Communication with the following other systems can be implemented with the mechanisms familiar from the S7 world (Put/Get) on the basis of S7 communication:

- To other SIMATIC S7 programmable controllers
- To HMI devices
- To PCs, laptops, field PGs with PROFIBUS cards

**Diagnostics**

Extensive diagnostic options are available via STEP 7, including

- Operating status of the CM
- General diagnostics and statistics functions
- Connection diagnostics
- Alarm buffer

STEP 7 Basic is required for configuring the full functional scope of the CM 1243-5 RAIL.

## Overview

The CP 1243-1 communications processor is used for connecting the SIMATIC S7-1200 to telecontrol centers via remote networks and telecontrol protocols (DNP3, IEC 60870-5-104, TeleControl Basic), and for safe communication via IP-based networks.

The CP has the following features:

- Ethernet-based connection to TeleControl Server Basic, e.g. via Internet
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Data transfer of measured values, control variables, or alarms optimized for telecontrol systems
- Automatic sending of alert emails
- Data buffering of up to 64,000 values ensures a secure database even with temporary connection failures
- Secure communication via VPN connections based on IPSec
- Access protection via Stateful Inspection Firewall
- Support of SINEMA Remote Connect with autoconfiguration
- Clearly laid out LED signaling for fast and easy diagnostics
- Compact industrial enclosure in S7-1200 design for mounting on a standard mounting rail
- Fast commissioning thanks to easy configuration using STEP 7

## Benefits

- **Data security**  
The CP 1243-1 has a large buffer for several thousand data values. Downtimes in the transmission link can then be bridged.
- **Fully automatic time stamp**  
To enable subsequent and correct archiving of process data in the control system, all data frames are time-stamped at their place of origin.
- **Fast and flexible data communication**  
Operators are quickly provided with alarms, statuses and values from the process, and they can influence process control by entering commands or setpoints at any time.
- **Simple, low-cost engineering**  
The cyclic or event-controller transfer of measurements, setpoints or alarms can be implemented in just a few steps, without any programming effort.

## Remote diagnostics

Saving of traveling and maintenance costs due to cost-effective remote programming, diagnostics, control and monitoring via the Internet

## Industrial Security

Securing plant networks against unauthorized access by means of:

- Central access protection for any devices within an automation cell, e.g. by means of authentication of the network stations
- Secure remote access via the Internet by means of data encryption (VPN) and data integrity checking

## Application

By using the CP 1243-1, the S7-1200 can be used as a remote terminal unit (substation) in telecontrol applications. Typical uses include the collection of measured values in geographically widely distributed outdoor areas (level measurement for water tanks) or centralized opening and closing of valves (oil/gas transport in pipelines).

- Plants in water, wastewater or environmental sectors:
  - Irrigation systems
  - Drinking water supply
- Monitoring of power networks for consumption metering and cost control
  - District heating networks
  - Wind farms
- Plants in the oil and gas sector
  - Oilfield water injection
  - Pipelines
- Transportation systems
  - Ventilation control in tunnel systems
  - Traffic control

Regardless of the telecontrol features of the CP, it can also be used purely for security applications if the automation system is to be connected securely to a higher-level IT network. This ensures that, within the framework of a network segmentation, the SIMATIC S7-1200 is protected against unauthorized access from Industrial Ethernet networks. The CP 1243-1 allows secure access via an Industrial Ethernet connection and allows the data transferred between devices or network segments to be protected from manipulation and industrial espionage.

## Design

The CP 1243-1 offers all the advantages of the S7-1200 design:

- Rugged, compact plastic enclosure
- Easily accessible connection and diagnostics elements, protected by front flaps
- Simple mounting on the mounting rail of the S7-1200

The CP 1243-1 is plugged into the left-hand system bus interface of the S7-1200. Power is supplied directly via the S7-1200. No additional wiring is necessary. Any required modems or routers are connected via the Ethernet interface on the underside of the module.

**SIPLUS RAIL**

SIPLUS S7-1200 RAIL

SIPLUS extreme RAIL communication

**SIPLUS S7-1200 CP 1243-1 RAIL****Function**

The CP 1243-1 communications processor is used for connecting the SIMATIC S7-1200 to control centers via Ethernet in tele-control applications and is also used in secure communications via IP-based networks (security functions).

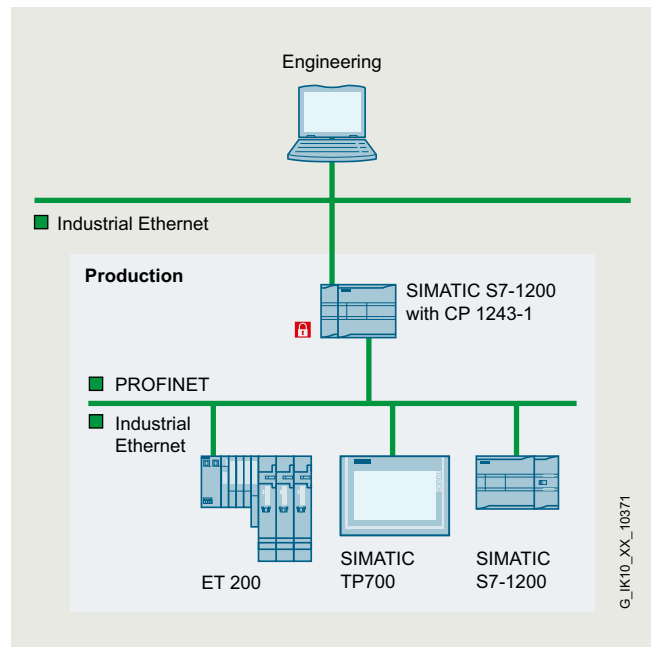

**Virtual Private Network (IPsec)**

The connection of S7-1200 via a VPN network ensures that only authenticated network nodes can communicate with the controller. Secure encryption of the data and verification of the data integrity protect the data traffic from espionage and manipulation.

**Stateful inspection firewall**

By using a firewall, the S7-1200 can provide additional protection against unauthorized access and attempted manipulation.

The firewall filters data packets and checks the communication connections in accordance with the filter list. Both incoming and outgoing communication can be filtered based on IP and MAC addresses.

Cell protection for SIMATIC S7-1200 with CP 1243-1 (Security Integrated)  
e.g. safe engineering access to the S7-1200

6

**Connection to a control center with TeleControl Server Basic**

With the help of the CP 1243-1, S7-1200-based remote stations in telecontrol applications can be directly connected via an IP-based network to the TeleControl Server Basic. By using addi-

tional routers (e.g. SCALANCE M for communication via mobile wireless or DSL), it is possible to make the connection via other media.

Telecontrol application with the S7-1200 as RTU, connected via mobile wireless (CP 1242-7) and DSL (with CP 1243-1 and SCALANCE M812-1)

### Connection to WinCC based or 3rd party control centers

With CP1243-1, it is possible in just a few steps to connect the remote station S7-1200 to a DNP3 or IEC 60870-5-104 based control center (e.g. WinCC or PCS 7).

Telecontrol application with the S7-1200 as RTU, connected via DSL to a PCS 7 control center with Telecontrol Add On

### Completely configurable application using "data point configuration"

"Data point configuration" in STEP 7 eliminates all programming effort for transmission of data to the control center.

The data of the CPU relevant to the control center is selected via user-friendly "item browsing" in STEP 7. In a clearly-arranged menu, the data transfer parameters are then assigned to the data points selected in this way. The cyclic or event-controller transfer of measured values, setpoints or alarms can thus be implemented in only a few operations and without programming effort.

### Data buffering

Data losses are prevented by the data buffering mechanisms integrated in the product.

In the event of a connection failure, up to 64 000 time-stamped values are buffered. When the connection returns, the buffered values are automatically transferred to the control center in the right order.

### DNP3 protocol

Communication with the control center is based on the established standard of DNP3 specification 2 (2007/2009).

Thanks to support of the object and data transfer mechanisms defined in the specification, compatibility with PCS 7, WinCC (with corresponding telecontrol packages), and all other control center systems available on the market is ensured.

The security mechanisms already defined in the DNP3 standard for secure data transfer through trunk networks are fully supported.

### IEC 60870 standard

Communication with the control center is based on the established communication standard in accordance with IEC 60870-5-104. This ensures that telecontrol and instrumentation and control devices and systems from Siemens or other vendors can communicate with each other without any fundamental adaptations. The variance and variabilities provided by this standard allow different vendor-specific profiles (e.g. the frame types and functions used). The profiles can be coordinated with each other with the help of an interoperability list. This standard has become widely used, especially in Europe and Asia. The IEC 60870-5-104 telecontrol protocol is also suitable as a field or station bus. Use as a station bus also enables direct communication between individual devices.

### Email alerts

Email alerts can be configured for timely provision of station states to service or maintenance personnel. When previously defined events (such as threshold violation) occur, application-specific information is sent automatically by email.

### Diagnostics

The CP1243-1 offers comprehensive diagnostic options for quick and informative analysis of the station status and VPN connections. Elementary diagnostic information is signaled directly via LEDs at the CP.

Extensive information, such as connection history, buffer status and transferred measured values, can be called up via STEP 7.

### Remote maintenance

For remote access from the control center to the substation, the CP provides a remote maintenance port parallel to process operation. This ensures monitoring access for firmware updates or program changes. Support of SINEMA Remote Connect with autoconfiguration.

### Interfaces

The CP1243-1 has an Ethernet interface. The S7-1200 can be connected directly via an existing network, or using additional routers via other media (e.g. SCALANCE M for mobile wireless communication).

### Power supply

Extra wiring for the CP power supply is not required. Power is supplied directly via the backplane bus of the S7-1200.

**More information****Technical requirements/compatibility**

An S7-1200 CPU with firmware version 4.1 is required to operate the CP 1243-1.

The CP 1243-1 can be configured with STEP 7 Basic/Professional V14 SP1 update (TIA Portal) or higher.

The TeleControl Server Basic V3 software package is required to connect to the PCS 7/WinCC control center systems.

## Overview

- Entry-level CPU in the SIPLUS extreme RAIL S7-1500 Controller product range
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Suitable for applications with medium requirements for program scope and processing speed
- PROFINET IO IRT interface with 2-port switch
- PROFINET IO controller for operating distributed I/O on PROFINET
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device under a SIMATIC or non-Siemens PROFINET IO controller
- Isochronous mode
- SIMATIC Memory Card required for operation of the CPU

## Application

The SIPLUS S7-1500 CPU 1511-1 PN RAIL is the most cost-effective entry-level CPU for applications with medium requirements for processing speed and speed of response. The CPU can be used as a PROFINET IO Controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 2-port switch so that a linear topology can be set up. In addition, the CPU offers comprehensive control functionalities via easy-to-configure blocks as well as the ability to connect drives via standardized PLC-open blocks.

## Design

The SIPLUS S7-1500 CPU 1511-1 PN RAIL has:

- A powerful processor:  
The CPU achieves command execution times as low as 60 ns per binary instruction.
- A large work memory:  
150 KB for program, 1 MB for data
- SIMATIC Memory Cards as load memory;  
permit additional functions such as datalog and archives
- Flexible expansion capability:  
single-tier configuration with max. 32 modules (CPU + 31 modules)
- PROFINET IO IRT interface for connecting distributed I/O via PROFINET

## Function

- Performance
  - Faster command processing, depending on the CPU type, language extensions and new data types
  - Even shorter response times of the CPUs due to considerably faster backplane bus
  - Powerful network connection:  
each CPU is equipped with PROFINET IO IRT (2-port switch) as standard interface.
- Integrated technology
  - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
  - Support of speed-controlled and positioning axes as well as external encoders, positionally precise gearing between axes.
  - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection
  - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
- Security Integrated
  - Password-based know-how protection against unauthorized read-out and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured memory card is inserted into the CPU.
  - 4-level authorization concept:  
Communication to the HMI devices can also be restricted.
  - Manipulation protection:  
The controller recognizes changed or unauthorized transmissions of the engineering data.
- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the TIA Portal, HMI devices and Web server, even for messages from the drives, and is updated even if the CPU is in STOP mode.
  - Integrated into the firmware of the CPU, no special configuration is required
- SIMATIC Memory Card (required for operation of the CPU)
  - Used as a plug-in load memory or for updating the firmware.
  - Also for storing additional documents or csv files (for recipes and archives)
  - Creation of data blocks for storage/reading of data via SFCs of the user program
- Datalog (archives) and recipes
  - Storage of csv files for recipes and archives on the SIMATIC Memory Card;  
easy access to plant-relevant operating data using Office tools or via a Web server
  - Easy access to machine configuration data by means of a Web browser or SD card reader (two-way data exchange from and to the controller)
- Programming
  - Programming with STEP 7 Professional

**SIPLUS RAIL**

SIPLUS S7-1500 RAIL

SIPLUS extreme RAIL standard CPUs

**SIPLUS S7-1500 CPU 1516-3 PN/DP RAIL****Overview**

- The CPU with a large program and data memory in the SIPLUS extreme RAIL S7-1500 Controller product range for applications with demanding requirements regarding program scope and networking.
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic.
- High processing speed for binary and floating-point arithmetic.
- Used as central controller in production lines with central and distributed I/O.
- PROFINET IO IRT interface with 2-port switch.
- PROFINET IO controller for operating distributed I/O on PROFINET.
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device under a SIMATIC or non-Siemens PROFINET IO controller.
- Additional PROFINET interface with separate IP address for network separation, for connecting further PROFINET IO RT devices, or for high-speed communication as an I-Device.
- PROFIBUS DP master interface.
- UA Server and Client as runtime option for the easy connection of SIMATIC S7-1500 to third-party devices/systems with the functions:
  - OPC UA Data Access
  - OPC UA Security
  - OPC UA Methods Call
  - Support of OPC UA Companion Specifications
  - OPC UA Alarms and Conditions
- Central and distributed isochronous mode on PROFIBUS and PROFINET.
- Integrated motion control functionalities for controlling speed-controlled and positioning axes, support for external encoders, output cams/cam tracks and probes.
- Integrated web server for diagnostics with the option of creating user-defined web pages.

Note:

SIMATIC Memory Card required for operation of the CPU

**Application**

The SIPLUS S7-1500 CPU 1516-3 PN/DP TX RAIL is the railway controller CPU with a large program and data memory for demanding tasks in applications that also contain distributed automation structures alongside central I/O.

It can be used as a PROFINET IO Controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 2-port switch so that a linear topology can be set up.

The additional integrated PROFINET interface with separate IP address can be used, for example, for network separation.

Distributed I/O can be connected via PROFIBUS via the integrated PROFIBUS interface.

In addition, the CPU offers comprehensive control functionalities as well as the ability to connect drives via standardized PLCopen blocks.

**Design**

The SIPLUS S7-1500 CPU 1516-3 PN/DP TX RAIL has:

- A powerful processor:
  - The CPU achieves command execution times as low as 10 ns per binary instruction.
- A large work memory:
  - 1 MB for program, 5 MB for data
- SIMATIC Memory Cards as load memory;
  - permit additional functions such as datalog and archives
- Flexible expansion capability:
  - single-tier configuration with max. 32 modules (CPU + 31 modules)
- Display with the functions for
  - Display of overview information such as IP address of the integrated interface, station name, plant designation, location designation, etc.
  - Display and acknowledgement of diagnostic and user messages
  - Display of module information
  - Showing display settings
  - Display of a user-definable logo
  - Setting of IP addresses
  - Setting of date and time
  - Selection of the operating mode
  - Resetting of the CPU to factory settings
  - Backup and restoring of the project
  - Disabling/enabling of the display
  - Enabling of protection levels
- PROFINET IO IRT interface for connecting distributed I/O via PROFINET
- PROFINET interface for network separation
- PROFIBUS DP interface for connecting distributed I/O via PROFIBUS

**Function**

- Performance
  - Faster command processing, depending on the CPU type, language extensions and new data types
  - Even shorter response times of the CPUs due to considerably faster backplane bus
  - High-performance network connection:  
Each CPU is equipped with PROFINET IO IRT (2-port switch) as standard interface. In addition, the CPU 1516-3 PN/DP features a second PROFINET interface, e.g. for network separation, for connecting further PROFINET IO RT devices, or for high-speed communication as an I-Device.
- Integrated technology
  - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
  - Support of speed-controlled and positioning axes as well as external encoders, precise position gearing between axes, output cams/output cam tracks and probes
  - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection; can also be called via the web server of the CPU
  - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
- Security Integrated
  - Password-based know-how protection against unauthorized read-out and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured memory card is inserted into the CPU.
  - 4-level authorization concept:  
Communication to the operating panels can also be restricted.
  - Manipulation protection:  
The controller recognizes changed or unauthorized transmissions of the engineering data.
- Design and handling
  - Display of overview information:  
E.g. Station name, plant designation, location identifier, etc., diagnostic information, module information, display settings.
  - Possible operations on the display:  
Set addresses of the CPU or connected Ethernet communications processors, set date and time, select operating mode of CPU, reset CPU to factory settings, disable/enable display, activate protection levels, acknowledge messages, back up and restore projects
- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the TIA Portal, operating panels and web server, even for messages from the drives, and is updated even if the CPU is in STOP mode.
  - Integrated into the firmware of the CPU, no special configuration is required
- SIMATIC Memory Card (required for operation of the CPU)
  - Used as a plug-in load memory or for updating the firmware.
  - Also for storing additional documents or csv files (for recipes and archives)
  - Creation of data blocks for storage/reading of data via SFCs of the user program
- Datalog (archives) and recipes
  - Storage of csv files for recipes and archives on the SIMATIC Memory Card;  
easy access to plant-relevant operating data using Office tools or via a web server
  - Easy access to machine configuration data by means of a web browser or SD card reader (two-way data exchange from and to the controller)
- Programming
  - Programming with STEP 7 Professional

<b>Time of day</b>	
<b>Clock</b>	
• Type	Hardware clock
<b>1. Interface</b>	
<b>Interface types</b>	
• RJ 45 (Ethernet)	Yes; X1
• Number of ports	2
• integrated switch	Yes
<b>Protocols</b>	
• IP protocol	Yes; IPv4
• PROFINET IO Controller	Yes
• PROFINET IO Device	Yes
• SIMATIC communication	Yes
• Open IE communication	Yes; Optionally also encrypted
• Web server	Yes
• Media redundancy	Yes
<b>PROFINET IO Controller</b>	
• Services	
- PG/OP communication	Yes
- Isochronous mode	Yes
- Direct data exchange	Yes; Requirement: IRT and isochronous mode (MRPD optional)
- IRT	Yes
- PROFlenergy	Yes; per user program
- Prioritized startup	Yes; Max. 32 PROFINET devices
- Number of connectable IO Devices, max.	256; In total, up to 1 000 distributed I/O devices can be connected via AS-i, PROFIBUS or PROFINET
- Of which IO devices with IRT, max.	64
- Number of connectable IO Devices for RT, max.	256
- of which in line, max.	256
- Number of IO Devices that can be simultaneously activated/deactivated, max.	8; in total across all interfaces
- Number of IO Devices per tool, max.	8
- Updating times	The minimum value of the update time also depends on communication share set for PROFINET IO, on the number of IO devices, and on the quantity of configured user data
<b>PROFINET IO Device</b>	
• Services	
- PG/OP communication	Yes
- Isochronous mode	No
- IRT	Yes
- PROFlenergy	Yes; per user program
- Shared device	Yes
- Number of IO Controllers with shared device, max.	4
- Asset management record	Yes; per user program
<b>2. Interface</b>	
<b>Interface types</b>	
• RJ 45 (Ethernet)	Yes; X2
• Number of ports	1
• integrated switch	No
<b>Protocols</b>	
• IP protocol	Yes; IPv4
• PROFINET IO Controller	Yes
• PROFINET IO Device	Yes
• SIMATIC communication	Yes
• Open IE communication	Yes; Optionally also encrypted
• Web server	Yes
• Media redundancy	No

## SIPLUS RAIL

### SIPLUS S7-1500 RAIL

### SIPLUS extreme RAIL fail-safe CPUs

#### SIPLUS S7-1500 CPU 1515F-2 PN RAIL

##### Overview

- The CPU for applications with medium to high requirements for program/data memory in the S7-1500 controller product range
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Can be used for safety functions up to SIL 3 according to IEC 61508 and up to PL e according to ISO 13849
- Medium to high processing speed for binary and floating-point arithmetic
- Used as central PLC in production lines with central and distributed I/O
- Supports PROFIsafe in centralized and distributed configurations
- PROFINET IO IRT interface with 2-port switch
- Additional PROFINET interface with separate IP address
- PROFINET IO controller for operating distributed I/O on PROFINET
- PROFINET I-device for connecting the CPU as an intelligent PROFINET device under a SIMATIC or non-Siemens PROFINET I/O controller
- Isochronous mode
- Integrated Motion Control functionalities for controlling speed-controlled and positioning axes, support for external encoders
- Integrated web server with the option of creating user-defined web pages

##### Note

SIMATIC Memory Card required for operation of the CPU

##### Application

SIPLUS S7-1500 CPU 1515F-2 PN RAIL is the CPU with a medium program and data memory for standard and fail-safe applications that also contain distributed automation structures alongside central I/O. It can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 2-port switch, enabling a linear topology to be set up in the system. The additional integrated PROFINET interface with separate IP address can be used, for example, for network separation. In addition, the CPU offers comprehensive control functionalities as well as the option to connect drives via standardized PLCopen blocks.

##### Design

SIPLUS S7-1500 CPU 1515F-2 PN T2 RAIL features:

- A powerful processor:  
The CPU achieves command execution times as low as 30 ns per binary instruction.
- Large work memory:  
750 KB for program, 3 MB for data
- SIMATIC Memory Cards as load memory;  
permit additional functions such as datalog and archives
- Flexible expansion capability:  
single-tier configuration with max. 32 modules (CPU + 31 modules)

- Display with functions for
  - Displaying overview information such as IP address of the integrated interface, station name, plant designation, location identifier, etc.
  - Displaying safety mode, collective signature and date of the last download with signature change
  - Displaying diagnostic information
  - Displaying module information
  - Showing display settings
  - Displaying a user-definable logo
  - Setting IP addresses
  - Setting the date and time
  - Selecting the operating mode
  - Resetting the CPU to factory settings
  - Disabling/enabling the display
  - Enabling protection levels
- PROFINET IO IRT interface for connecting distributed I/O via PROFINET
- PROFINET interface for network separation

##### Function

- Performance
  - Faster command processing, depending on the CPU type, language extensions and new data types
  - Even shorter response times of the CPUs due to considerably faster backplane bus
  - Powerful network connection:  
Each CPU is equipped with PROFINET IO IRT (2-port switch) as standard interface.
- Integrated technology
  - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
  - Support of speed-controlled and positioning axes as well as external encoders
  - Trace functions for all CPU tags, both for diagnostics in real time and for sporadic error detection
  - Comprehensive control functionalities, e.g. easy to configure blocks for automatic optimization of the control parameters for optimum control quality
- Security Integrated
  - Password-based know-how protection against unauthorized read-out and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured memory card is inserted in the CPU.
  - 4-level authorization concept:  
Communication to the operator panels can also be restricted.
  - Manipulation protection:  
The controller recognizes changed or unauthorized transmissions of the engineering data.
- Design and handling
  - Display of overview information:  
E.g. Station name, plant designation, location identifier, etc., diagnostic information, module information, display settings.
  - Operator control options on the display:  
set addresses of the CPU or connected Ethernet communications processors, set date and time, select operating mode of CPU, reset CPU to factory settings, disable/enable display, activate protection levels.
- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the display, TIA Portal, operator panels and web server, even for messages from the drives, and updated even if the CPU is in STOP mode.
  - Integrated in the firmware of the CPU, no special configuration is required

**SIPLUS S7-1500 CPU 1515F-2 PN RAIL**

- SIMATIC Memory Card (required for operation of the CPU)
  - Used as a plug-in load memory or for updating the firmware.
  - Also for storing additional documents or csv files (for recipes and archives)
  - Storage of data blocks and storage/reading of data via SFCs of the user program
- Datalog (archives) and recipes
  - Storage of csv files for recipes and archives on the SIMATIC Memory Card;
  - easy access to plant-relevant operating data using Office tools or via a web server
  - Easy access to configuration data of the machine by means of a web browser or SD card reader (two-way data exchange from and to the PLC)
- Programming of the standard program section
  - Programming with STEP 7 Professional, V13 and higher
  - Migration tool for migrating from SIMATIC S7-300/S7-400 to S7-1500, converts the standard program code largely automatically. Non-convertible code is logged and can be manually adapted.
  - S7-1200 basic programs can be transferred to S7-1500 by copy-paste.
- Programming of the fail-safe program section
  - Programming of the safety-related program section with the "STEP 7 Safety Advanced" option package

## Overview

- The CPU with a large program and data memory in the S7-1500 Controller product range for fail-safe applications with high requirements regarding program scope and networking.
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Can be used for failsafe functions up to SIL 3 according to IEC 61508 and up to PLe according to ISO 13849.
- High processing speed for binary and floating-point arithmetic
- Supports PROFIsafe in centralized and distributed configuration.
- PROFINET IO IRT interface with 2-port switch.
- Additional PROFINET interface with separate IP address.
- PROFINET IO controller for operating distributed I/O on PROFINET.
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device under a SIMATIC or non-Siemens PROFINET IO controller.
- PROFIBUS DP master interface.
- Isochronous mode on PROFIBUS and PROFINET.
- Integrated Motion Control functionalities for controlling speed-controlled and positioning axes, support for external encoders.
- Integrated web server with the option of creating user-defined web pages.

### Note:

SIMATIC Memory Card required for operation of the CPU

## Application

The SIPLUS CPU 1516F-3 PN/DP RAIL is the CPU with a large program and data memory for demanding standard and fail-safe applications that also contain distributed automation structures alongside central I/O.

It can be used as a PROFINET IO Controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 2-port switch so that a linear topology can be set up in the system. The additional integrated PROFINET interface with separate IP address can be used, for example, for network separation. Distributed I/O can be connected via PROFIBUS (or PROFIsafe) via the integrated PROFIBUS interface. In addition, the CPU offers comprehensive control functionalities as well as the ability to connect drives via standardized PLCopen blocks.

## Design

The SIPLUS CPU 1516F-3 PN/DP RAIL has:

- A powerful processor:  
The CPU achieves a command execution time as low as 10 ns per binary command.
- Extensive work memory:  
1.5 MB for program, 5 MB for data
- SIMATIC Memory Cards as load memory;  
permit additional functions such as datalog and archives
- Flexible expansion possibilities:  
single-tier configuration with max. 32 modules (CPU + 31 modules)

- Display with functions for:
  - Displaying overview information such as IP address of the integrated interface, station name, plant designation, location identifier, etc.
  - Displaying safety mode, overall signature and date of the last download with signature change
  - Display of diagnostic information
  - Display of module information
  - Showing display settings
  - Display of a user-definable logo
  - Setting IP addresses
  - Setting of date and time
  - Selection of operating mode
  - Resetting of the CPU to factory settings
  - Disabling/enabling of display
  - Enabling of protection levels
  - Display of safety mode, overall signature and date of the last download with signature change.
- PROFINET IO IRT interface for connecting distributed I/O via PROFINET
- PROFINET interface for network separation
- PROFIBUS DP interface for connecting distributed I/O via PROFIBUS
- Supports PROFIsafe in centralized and distributed configuration

## Function

Thanks to a variety of innovations and integrated functions, the SIMATIC S7-1500 CPUs offer added value with regard to performance and engineering efficiency. A host of features support users in programming, commissioning, and servicing the S7-1500:

- Performance
  - Faster command processing, depending on the CPU type, language extensions and new data types
  - Even shorter response times of the CPUs due to considerably faster backplane bus
  - High-performance network connection: PROFINET IO IRT (2-port switch) as standard interface. Additional PROFINET interface integrated, e.g. for network separation.
- Integrated technology
  - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
  - Support of speed-controlled and positioning axes as well as external encoders
  - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection
  - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
- Security Integrated
  - Password-based know-how protection against unauthorized reading and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card:  
The block can only run if the configured memory card is inserted in the CPU.  
4-level authorization concept:  
Communication to the HMI devices can also be restricted.
  - Manipulation protection:  
The controller recognizes changed or unauthorized transmissions of the engineering data.
- Design and handling
  - Display of overview information:  
e.g. station name, plant identifier, location ID, diagnostic information, module information, display settings, etc.
  - Possible operations on the display:  
set addresses, set date and time, select operating mode of CPU, reset CPU to factory settings, disable/enable display, activate protection levels.

**SIPLUS RAIL**

SIPLUS S7-1500 RAIL

SIPLUS extreme RAIL fail-safe CPUs

**SIPLUS S7-1500 CPU 1516F-3 PN/DP RAIL**

- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the display, TIA Portal, HMI devices and Web server, even for messages from the drives, and updated even if the CPU is in STOP mode.
  - Integrated in the firmware of the CPU, no special configuration is required
- SIMATIC Memory Card (required for operation of the CPU)
  - Used as plug-in load memory or for updating the firmware.
  - Also for storing additional documents or csv files (for recipes and archives)
  - Creation of data blocks for storage/reading of data via SFCs of the user program
- Datalog (archives) and recipes
  - Storage of csv files for recipes and archives on the SIMATIC Memory Card;
  - easy access to plant-relevant operating data using Office tools or via a Web server
  - Easy access to configuration data of the machine by means of a Web browser or SD card reader (two-way data exchange from and to the controller)
- Programming of the standard program section
  - Programming with STEP 7 from V13 or higher.
- Programming of the failsafe program section
  - Programming of the safety-related program section with the option package "STEP 7 Safety Advanced".

Article number	<b>6AG2516-3FN02-2AB0</b> SIPLUS S7-1500 CPU 1516F-3 PN/DP RAIL	<b>6AG2516-3FN02-4AB0</b> SIPLUS S7-1500 CPU 1516F-3 PN/DP RAIL
<b>3. Interface</b>		
<b>Interface types</b>		
• RS 485	Yes; X3	Yes; X3
• Number of ports	1	1
<b>Protocols</b>		
• PROFIBUS DP master	Yes	Yes
• PROFIBUS DP slave	No	No
• SIMATIC communication	Yes	Yes
<b>PROFIBUS DP master</b>		
• Number of DP slaves, max.	125; In total, up to 1 000 distributed I/O devices can be connected via AS-i, PROFIBUS or PROFINET	125; In total, up to 1 000 distributed I/O devices can be connected via AS-i, PROFIBUS or PROFINET
<b>Protocols</b>		
<b>Number of connections</b>		
• Number of connections, max.	256; via integrated interfaces of the CPU and connected CPs / CMs	256; via integrated interfaces of the CPU and connected CPs / CMs
<b>Redundancy mode</b>		
• Media redundancy		
- Media redundancy	only via 1st interface (X1)	only via 1st interface (X1)
- MRP	Yes; MRP Automanager acc. to IEC 62439-2 Edition 2.0; MRP Manager; MRP Client; max. number of devices in the ring: 50	Yes; MRP Automanager acc. to IEC 62439-2 Edition 2.0; MRP Manager; MRP Client; max. number of devices in the ring: 50
- MRPD	Yes; Requirement: IRT	Yes; Requirement: IRT
- Switchover time on line break, typ.	200 ms; For MRP, bumpless for MRPD	200 ms; For MRP, bumpless for MRPD
- Number of stations in the ring, max.	50	50
<b>SIMATIC communication</b>		
• S7 routing	Yes	Yes
<b>OPC UA</b>		
• OPC UA Client	Yes	Yes
• OPC UA Server	Yes; Data access (read, write, subscribe), method call, custom address space	Yes; Data access (read, write, subscribe), method call, custom address space
<b>Supported technology objects</b>		
<b>Motion Control</b>		
• Number of available Motion Control resources for technology objects	Yes; Note: The number of axes affects the cycle time of the PLC program; selection guide via the TIA Selection Tool or SIZER 2 400	Yes; Note: The number of axes affects the cycle time of the PLC program; selection guide via the TIA Selection Tool or SIZER 2 400
• Required Motion Control resources		
- per speed-controlled axis	40	40
- per positioning axis	80	80
- per synchronous axis	160	160
- per external encoder	80	80
- per output cam	20	20
- per cam track	160	160
- per probe	40	40
<b>Controller</b>		
• PID_Compact	Yes; Universal PID controller with integrated optimization	Yes; Universal PID controller with integrated optimization
• PID_3Step	Yes; PID controller with integrated optimization for valves	Yes; PID controller with integrated optimization for valves
• PID-Temp	Yes; PID controller with integrated optimization for temperature	Yes; PID controller with integrated optimization for temperature
<b>Counting and measuring</b>		
• High-speed counter	Yes	Yes
<b>Standards, approvals, certificates</b>		
<b>Highest safety class achievable in safety mode</b>		
• SIL in accordance with EN 50126, 50128, 50129	SIL 2; a higher safety integrity level is possible if tested and approved for the specific application under consideration of all local regulations.	SIL 2; a higher safety integrity level is possible if tested and approved for the specific application under consideration of all local regulations.
<b>Probability of failure (for service life of 20 years and repair time of 100 hours)</b>		
• Low demand mode: PFDavg in accordance with SIL3	< 2.00E-05	< 2.00E-05
• High demand/continuous mode: PFH in accordance with SIL3	< 1.00E-09	< 1.00E-09

## Overview

- The CPU for applications with medium/high requirements for program scope, networking and processing speed, and with increased requirements for availability
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- High processing speed for binary and floating-point arithmetic
- PROFINET IO RT interface with 2-port switch
- Additional PROFINET interface with separate IP address
- PROFINET IO controller for operating distributed I/O on PROFINET

### Note:

SIMATIC Memory Card required for operation of the CPU.

## Application

The SIPLUS S7-1500 CPU 1515R-2 PN RAIL is the CPU with a large program and data memory for applications which have higher requirements for availability compared with standard CPUs. It can be used as the PROFINET IO controller. The integrated PROFINET IO RT interface is configured as a 2-port switch, enabling a ring topology required for SIPLUS S7-1500R to be set up in the system. The additional integrated PROFINET interface with separate IP address can be used, for example, for network separation.

## Design

The SIPLUS S7-1500CPU 1515R-2 PN RAIL features:

- A powerful processor:  
The CPU achieves a command execution time as low as 60 ns per binary command.
- Large work memory:  
500 KB for program, 3 MB for data
- SIMATIC Memory Cards as load memory
- Display with functions for:
  - Display of overview information such as station name, higher level designation, location designation, etc.
  - Display of diagnostic information
  - Display of module information
  - Showing display settings
  - Setting IP addresses
  - Setting date and time
  - Displaying operating mode (redundant or non-redundant)
  - Displaying status (stop, primary or backup)
  - Resetting of CPU to factory settings
  - Disabling/enabling the display
  - Enabling protection levels
- PROFINET IO RT interface for connecting distributed I/O via PROFINET

## Function

- Performance
  - Faster command processing, depending on the CPU type, language extensions and new data types
  - Even shorter response times of the CPUs due to considerably faster backplane bus
  - Powerful network connection:  
Each CPU is equipped with PROFINET IO RT (2-port switch) as the standard interface.
- Security Integrated
  - Password-based know-how protection against unauthorized read-out and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured memory card is inserted into the CPU.
  - 4-level authorization concept:  
Communication to the operator panels can also be restricted.
  - Manipulation protection:  
The controller recognizes changed or unauthorized transmissions of the engineering data.
- Design and handling
  - Display of overview information:  
E.g. Station name, plant identifier, location designation, etc., diagnostic information, module information, display settings.
  - Possible operations on the display:  
set addresses, set date and time, select operating mode of CPU, reset CPU to factory settings, disable/enable display, activate protection levels.
- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the display, TIA Portal, operator panels and web server, even for messages from the drives, and updated even if the CPU is in STOP mode.
  - Integrated in the firmware of the CPU, no special configuration is required
- SIMATIC Memory Card (required for operation of the CPU)
  - Used as a plug-in load memory or for updating the firmware.
  - Also for storing additional documents or csv files (for recipes and archives)
- Programming of the standard program section
  - Programming with STEP 7 V15.1

Article number	<b>6AG2515-2RM00-4AB0</b> SIPLUS S7-1500 CPU 1515R-2 PN TX RAIL
<b>General information</b>	
<b>Product type designation</b>	CPU 1515R-2 PN
<b>Engineering with</b> • STEP 7 TIA Portal configurable/integrated from version	see entry ID: 109746275
<b>Supply voltage</b>	
<b>Rated value (DC)</b>	24 V
<b>Memory</b>	
<b>Work memory</b> • integrated (for program) • integrated (for data)	500 kbyte 3 Mbyte
<b>Load memory</b> • Plug-in (SIMATIC Memory Card), max.	32 Gbyte
<b>CPU processing times</b>	
<b>for bit operations, typ.</b>	60 ns
<b>for word operations, typ.</b>	72 ns
<b>for fixed point arithmetic, typ.</b>	96 ns
<b>for floating point arithmetic, typ.</b>	384 ns
<b>Counters, timers and their retentivity</b>	
<b>S7 counter</b> • Number	2 048
<b>IEC counter</b> • Number	Any (only limited by the main memory)
<b>S7 times</b> • Number	2 048
<b>IEC timer</b> • Number	Any (only limited by the main memory)
<b>Data areas and their retentivity</b>	
<b>Flag</b> • Size, max.	16 kbyte
<b>Address area</b>	
<b>I/O address area</b> • Inputs • Outputs	32 kbyte; All inputs are in the process image 32 kbyte; All outputs are in the process image
<b>1. Interface</b>	
<b>Interface types</b> • RJ 45 (Ethernet) • Number of ports • integrated switch	Yes; X1 2 Yes
<b>Protocols</b> • IP protocol • PROFINET IO Controller • PROFINET IO Device • SIMATIC communication • Open IE communication • Web server • Media redundancy	Yes; IPv4 Yes No Yes; Only Server Yes No Yes
<b>PROFINET IO Controller</b> • Services - PG/OP communication - Isochronous mode - IRT - PROFinergy - Number of connectable IO Devices, max. - Updating times	Yes No No Yes 64 The minimum value of the update time also depends on communication share set for PROFINET IO, on the number of IO devices, and on the quantity of configured user data
<b>2. Interface</b>	
<b>Interface types</b> • RJ 45 (Ethernet) • Number of ports • integrated switch	Yes; X2 1 No
<b>Protocols</b> • IP protocol • PROFINET IO Controller • PROFINET IO Device • SIMATIC communication • Open IE communication • Web server • Media redundancy	Yes; IPv4 No No Yes; Only Server Yes No No

Article number	<b>6AG2515-2RM00-4AB0</b> SIPLUS S7-1500 CPU 1515R-2 PN TX RAIL
<b>Protocols</b>	
<b>Number of connections</b> • Number of connections, max.	108
<b>Redundancy mode</b> • Media redundancy - MRP  - MRPD - Switchover time on line break, typ. - Number of stations in the ring, max.	Yes; Manager Auto is permanently set in TIA. Max. 50 nodes are possible, 16 are recommended No 200 ms; PROFINET MRP 50; Only 16 are recommended, however
<b>SIMATIC communication</b> • S7 routing	No
<b>OPC UA</b> • OPC UA Client • OPC UA Server	No No

## Overview

- 16-channel digital input module
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For flexible adaptation of the controller to the corresponding task
- For subsequent expansion of the system with additional inputs

## Application

The digital module inputs records 24 V DC signals in the system and forwards them to the controller. Switches and 2-wire proximity switches can be connected.

Input modules have settable parameters and diagnostic functions and can thus be adapted flexibly to the respective process requirements.

## Design

- Installation on the S7-1500 mounting rail using one single screw
- Standardized 40-pin front connector using screw terminal or push-in technology
- Standardized, harmonized front connector assignment for easier wiring
- Connectable core cross-sections: 0.25 mm<sup>2</sup> to 1.5 mm<sup>2</sup> (AWG24 to 16)
- Integrated potential bridges for flexible creation of potential groups
- Front connector can be set to prewiring position
- Front flap with expandable cable compartment, even if fully wired
- Unambiguous labeling on front of module:
  - Module type
  - Article No.
  - Hardware and firmware version
  - Channel numbers labeling
  - Cabling diagram

Included in the scope of delivery:

- One labeling strip for manual labeling
- One U connector
- Printed front door

## Function

- Uniform display and diagnostics concept:
  - Module status display for ERROR (red LED) and RUN (green LED)
  - Channel status display for signal state log. "0" and log. "1" (green LED) or indication of wire break (red LED)
  - Display for monitoring the 24 V DC supply voltage (green LED)
- Supported functions:
  - Identification and maintenance data IMO to IM3
  - Firmware update
  - Module-granular shared device and MSI (modular shared input); in combination with PROFINET these allow assignment to several IO controllers
  - Channel-specific parameter assignment (only HF modules)
  - Hardware interrupts (only HF modules)
  - Channel-granular diagnostics (only HF modules)
  - Isochronous mode (dependent on the module)

Version	Article No.
<b>SIPLUS extreme SM 521 RAIL digital input modules</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic	
<b>SIPLUS S7-1500 DI 16 x 24 V DC HF TX RAIL</b> 16 inputs, 24 V DC, isolated, configurable diagnostics and hardware interrupts; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2521-1BH00-4AB0</b>
<b>SIPLUS S7-1500 DI 16 x 110 V DC HF TX RAIL</b> 16 inputs, 24 ... 125 V UC, input delay 0.05 ... 20 ms, parameterizable diagnostics and hardware interrupts; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2521-7EH00-4AB0</b>

### Overview

- 8 and 16-channel digital output modules
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For flexible adaptation of the controller to the corresponding task
- For subsequent expansion of the system with additional outputs

### Application

Digital output modules switch 24 V DC or 230 V AC voltages in the plant and thus transfer internal signals from the controller to the plant. Solenoid valves, DC contactors, and indicator lights can be connected.

The output modules have settable parameters and diagnostic functions and can thus be adapted flexibly to the respective process requirements.

### Design

- Installation on the S7-1500 mounting rail using one single screw
- Standardized 40-pin front connector using screw terminal or push-in technology
- Standardized, harmonized front connector assignment for easier wiring
- Connectable core cross-sections: 0.25 mm<sup>2</sup> to 1.5 mm<sup>2</sup> (AWG24 to 16)
- Integrated potential bridges for flexible creation of potential groups
- Front connector can be set to prewiring position
- Front flap with expandable cable compartment, even if fully wired
- Unambiguous labeling on front of module:
  - Module type
  - Article No.
  - Hardware and firmware version
  - Channel numbers labeling
  - Cabling diagram

Included in the scope of delivery:

- One labeling strip for manual labeling
- One U connector
- Printed front door

### Function

- Uniform display and diagnostics concept:
  - Module status display for ERROR (red LED) and RUN (green LED)
  - Channel status indicator for signal state log. "0" and log. "1" (green LED) or indication of short-circuit (red LED)
  - Display for monitoring the 24 V DC supply voltage (green LED)
- Supported functions:
  - Identification and maintenance data IM0 to IM3
  - Firmware update
  - Channel-granular parameter assignment (HF modules only)
  - Channel-granular diagnostics (HF modules only)
  - Isochronous mode (dependent on the module)
  - Substitute values can be parameterized for the outputs

#### Selection and ordering data

Version	Article No.
<b>SIPLUS extreme SM 522 RAIL digital output modules</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic	
<b>SIPLUS S7-1500 DQ 16 x 24 V DC HF TX RAIL</b> 16 outputs, 24 V DC; 0.5 A, isolated; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2522-1BH01-4AB0</b>
<b>SIPLUS S7-1500 DQ 8 x 230 V AC ST 5A T1 RAIL</b> 8 relay outputs, 230 V AC; 5 A; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -25 ... +55 °C (+70 °C for 10 min.)	<b>6AG2522-5HF00-1AB0</b>
<b>SIPLUS S7-1500 DQ 16 x 110 V DC ST TX RAIL</b> 16 outputs, 24 ... 48 V UC, 125 V DC, 0.5 A, isolated; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2522-5EH00-4AB0</b>

## Overview

- 8-channel analog input modules
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- Optionally with extremely short conversion times
- For the connection of analog sensors without additional amplifiers
- Even solves more complex automation tasks

## Application

Analog input modules record process signals such as pressure or temperature and forward them in digitalized format (16-bit format) to the control. They are suitable for measuring current (2-wire and 4-wire transducers), voltage, and resistance, as well as for the connection of resistance thermometers and thermocouples (measurement types depend on the module).

## Design

- Installation on the S7-1500 mounting rail using one single screw
- Standardized 40-pin front connector using screw terminal or push-in technology
- Connectable core cross-sections: 0.25 mm<sup>2</sup> to 1.5 mm<sup>2</sup> (AWG24 to 16), regardless of the front connector used
- Front connector can be set to prewiring position
- Front flap with expandable cable compartment, even if fully wired
- Integrated shielding concept
- Unambiguous labeling on front of module:
  - Module type
  - Article No.
  - Hardware and firmware version
  - Channel numbers labeling
  - Cabling diagram

Included in the scope of delivery:

- Infeed element, shield clamp, and shield terminal
- One labeling strip for manual labeling
- One U connector
- Printed front door

## Function

- Uniform display and diagnostics concept:
  - Module status display for ERROR (red LED) and RUN (green LED)
  - Channel status display (channel activated or deactivated, green LED) or diagnostics display (red LED)
  - Display for monitoring the 24 V DC supply voltage (green LED)
- Supported functions:
  - Consistently high resolution of 16 bits
  - Identification and maintenance data IM0 to IM3
  - Firmware update
  - Channel-specific parameter assignment
  - Hardware interrupts; two upper and two lower limits can be parameterized
  - Channel-granular diagnostics (depends on measurement type/measuring range)
  - Isochronous mode (dependent on the module)
  - Calibration during runtime

**SIPLUS RAIL**

SIPLUS S7-1500 RAIL

SIPLUS extreme RAIL analog modules

**SIPLUS extreme RAIL analog output modules****Overview**

- 4-channel analog output module
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- Optionally with extremely short conversion times
- For connecting analog actuators without additional amplifiers
- Even solves more complex automation tasks

**Application**

Analog output modules convert a 16-bit digital value into a current or a voltage and output this to the process. They are suitable, for example, for controlling proportional valves or small servo drives.

**Design**

- Installation on the S7-1500 mounting rail using one single screw
- Standardized 40-pin front connector using screw terminal or push-in technology
- Connectable core cross-sections: 0.25 mm<sup>2</sup> to 1.5 mm<sup>2</sup> (AWG24 to 16), regardless of the front connector used
- Front connector can be set to prewiring position
- Front flap with expandable cable compartment, even if fully wired
- Integrated shielding concept
- Unambiguous labeling on front of module:
  - Module type
  - Article No.
  - Hardware and firmware version
  - Channel numbers labeling
  - Cabling diagram

Included in the scope of delivery:

- Infeed element, shield clamp, and shield terminal
- One labeling strip for manual labeling
- One U connector
- Printed front door

**Function**

- Uniform display and diagnostics concept:
  - Module status display for ERROR (red LED) and RUN (green LED)
  - Channel status display (channel activated or deactivated, green LED) or diagnostics display (red LED)
  - Display for monitoring the 24 V DC supply voltage (green LED)
- Supported functions:
  - Consistently high resolution of 16 bits
  - Identification and maintenance data IMO to IM3
  - Firmware update
  - Channel-specific parameter assignment
  - Channel-granular diagnostics (depends on measurement type/measuring range)
  - Substitute values can be parameterized for the outputs
  - Calibration during runtime
  - Isochronous mode (dependent on the module)

**Technical specifications**

#### Selection and ordering data

Version	Article No.
<b>SIPLUS extreme RAIL SM 532 analog output modules</b> Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic	
<b>SIPLUS S7-1500 AQ 4xU/I ST TX RAIL</b> 4 analog outputs, ±10 V, 1 ... 5 V, 0 ... 10 V or ±20 mA, 0/4 ... 20 mA, 16-bit; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2532-5HD00-4AB0</b>

## Overview

- 8 digital inputs, 16 digital outputs, of which up to 16 can be used in different configurations as technological, time-controlled channels
- Inputs for detecting the input edges with  $\mu\text{s}$  accuracy
- Outputs for outputting switching signals with  $\mu\text{s}$  accuracy
- 32x oversampling
- PWM output
- Counter function
- Outputs can be switched between 0.5 A standard and especially fast 0.1 A high-speed operation

## Application

Time-based IO modules read in switching edges at digital inputs with a high time resolution, and supply time information, as well as the status, to the CPU.

For the digital outputs, switching commands with additional time information are transferred from the CPU. The outputs switch at a pre-defined time.

The modules can be used for diverse applications requiring accuracy below the resolution of the PLC or bus cycle. This requires no more than storage of the relevant instructions in the controller.

The following time-based I/O modules are available:

- **Timer DIDQ 16x24V**  
Time-controlled timer module with 8 inputs and 16 outputs, of which up to 16 with time stamp function; counter function up to 50 kHz, oversampling, pulse width modulation; requires isochronous mode

## Design

- Installation on the S7-1500 mounting rail using one single screw
- Standardized 40-pin front connector
- Connectable core cross-sections: 0.25 mm<sup>2</sup> to 1.5 mm<sup>2</sup> (AWG24 to 16)
- Prewiring position of the front connector
- Front flap with expandable cable compartment, even if fully wired
- Integrated shielding concept

Included in the scope of delivery:

- One labeling strip for manual labeling
- One U connector
- Printed front door
- Shield clamp, and shield terminal

## Function

- Uniform display and diagnostics concept:
  - Module status display for ERROR (red LED) and RUN (green LED)
  - Channel status indicator for signal state log. "0" and log. "1" (green LED) or diagnostics display (red LED)
  - Display for monitoring the 24 V DC supply voltage (green LED)
- Supported functions:
  - Inputs with time tagging (requires isochronous mode)
  - Outputs with time tagging (requires isochronous mode)
  - 32x oversampling of the inputs (requires isochronous mode)
  - 32x oversampling of the outputs (requires isochronous mode)
  - Counter for 1 track or 2 tracks with 90° phase-shifted signal (does not require isochronous mode)
  - Pulse width modulation (does not require isochronous mode)
  - Inputs can be used as an enabler for inputs or outputs
  - Isochronous mode
- Uniform system functions of SIMATIC S7-1500 and ET 200MP:
  - Identification and maintenance data IMO
  - Firmware update
  - Unambiguous labeling on front of module
  - Uniform front connector

Article number	<b>6AG2552-1AA00-4AB0</b> SIPLUS S7-1500 TM TIMER DIDQ 16x24V RAIL
<b>General information</b>	
<b>Product type designation</b>	TM Timer DIDQ 16x24V
<b>Product function</b>	
• I&M data	Yes; I&M 0
• Isochronous mode	Yes
<b>Installation type/mounting</b>	
<b>Rail mounting</b>	Yes; S7-1500 mounting rail
<b>Supply voltage</b>	
<b>Load voltage 1L+</b>	
• Rated value (DC)	24 V
• Reverse polarity protection	Yes; against destruction
<b>Load voltage 2L+</b>	
• Rated value (DC)	24 V
• Reverse polarity protection	Yes; against destruction
<b>Encoder supply</b>	
<b>Number of outputs</b>	8; max. depending on parameterization
<b>24 V encoder supply</b>	
• 24 V	Yes; L+ (-0.8 V)
• Short-circuit protection	Yes
• Output current, max.	1.2 A; Total current of all encoders / channels, max. 0.5 A per output
<b>Digital inputs</b>	
<b>Number of digital inputs</b>	8; max. depending on parameterization
• in groups of	8
<b>Digital inputs, parameterizable</b>	Yes
<b>Input characteristic curve in accordance with IEC 61131, type 3</b>	Yes
<b>Digital input functions, parameterizable</b>	
• Digital input with time stamp	Yes
- Number, max.	8
• Counter	Yes
- Number, max.	4
• Counter for incremental encoder	Yes
- Number, max.	4
• Digital input with oversampling	Yes
- Number, max.	8
• HW enable for digital input	Yes
- Number, max.	4
• HW enable for digital output	Yes
- Number, max.	4
<b>Input voltage</b>	
• Type of input voltage	DC
• Rated value (DC)	24 V
• for signal "0"	-5 ... +5 V
• for signal "1"	+11 to +30V
• permissible voltage at input, min.	-30 V; -5 V continuous, -30 V brief reverse polarity protection
• permissible voltage at input, max.	30 V
<b>Input current</b>	
• for signal "1", typ.	2.5 mA
<b>Input delay (for rated value of input voltage)</b>	
• Minimum pulse width for program reactions	3 µs for parameterization "none"
<b>for standard inputs</b>	
• parameterizable	Yes; none / 0.05 / 0.1 / 0.4 / 0.8 ms

<b>SIPLUS S7-1500 TM Timer DIDQ 16x24 V RAIL DI/DQ 16x24 V RAIL</b> <ul style="list-style-type: none"> <li>Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic</li> </ul> Time-controlled digital inputs and outputs max. 8 DI, 16 DQ of which max. 16 with time stamp, counting, PWM, oversampling for areas with extreme exposure to media (conformal coating); ambient temperature -40 ... +70 °C, OT4 with ST 1/2, (+85 °C for 10 min.)	<b>6AG2552-1AA00-4AB0</b>

## Overview

- Module for serial communication connections
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Physical transmission media:
  - RS 232C, max. 115.2 Kbps
  - RS 422/RS 485, max. 115.2 kbps
- Protocols supported
  - Freeport: User-parameterizable frame format for universal communication
  - 3964(R) for improved transmission reliability
  - Modbus RTU Master
  - Modbus RTU Slave
  - USS, implemented through instructions

## Application

Communications modules enable connection with an external communication partner to exchange data. Comprehensive parameterization options make it possible to adapt the control flexibly to the communication partner. Modbus RTU master creates a Modbus RTU network for up to 30 Modbus slaves.

The following communication module is available:

- SIPLUS S7-1500 CM PtP RS232 HF TX RAIL; communication module with RS232 interface for the Freeport, 3964(R), USS and Modbus RTU protocols; 9-pin D-sub connector, max. 115.2 Kbps, 4 KB frame length, 8 KB receive buffer
- SIPLUS S7-1500 CM PtP RS422/485 HF TX RAIL; communication module with RS422 and RS485 interface for the protocols Freeport, 3964(R), USS and Modbus RTU; 15-pin sub D socket, max. 115.2 Kbit/s, 4 KB frame length, 8 KB receive buffer

## Design

- Mounting on the S7-1500 mounting rail using one single screw
- Unique sub D connector, cannot be interchanged
- Front flap with expandable cable compartment

Included in the scope of delivery:

- One U connector
- Front door

## Function

- Uniform display and diagnostics concept:
  - Module status display for ERROR (red LED) and RUN (green LED)
  - Communication display for sending and receiving
- Protocols supported:
  - Freeport: User-parameterizable frame format for universal communication
  - 3964(R) for improved transmission reliability
  - Modbus RTU Master
  - Modbus RTU Slave
  - USS, implemented through instructions
- Interface properties:
  - RS 232 with auxiliary signals
  - RS 422 for full-duplex connections
  - RS485 for half-duplex and multi-point connections
  - Transmission rates from 300 to 115 200 bps
  - Connection via D-sub connector
- Uniform system functions of SIMATIC ET 200MP:
  - Identification and maintenance data IMO
  - Firmware update
  - Unambiguous labeling on front of module

**SIPLUS RAIL**

SIPLUS S7-1500 RAIL

SIPLUS extreme RAIL F-digital/analog modules

**SIPLUS extreme RAIL F-digital input modules****Overview**

SIPLUS extreme RAIL digital fail-safe input module:

F-DI 16x24 V DC

Important properties:

- 16-channel fail-safe digital input module for ET 200MP/S7-1500
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For fail-safe reading of sensor information (1 or 2 channels)
- Provides integral discrepancy evaluation for 2-out-of-2 signals

- 4 internal sensor supplies (incl. test function) onboard
- Certified up to SIL 3 (IEC 61508), PL e (ISO 13849)
- LED display for error, operation, supply voltage and status
- Clear module labeling
  - Plain text identification of the module type
  - Complete Article No.
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Hardware and firmware version
- Optional labeling accessories
  - Labeling sheets, yellow
- The modules support PROFIsafe in both PROFIBUS and PROFINET configurations. Can be used with all fail-safe SIPLUS extreme RAIL S7-1500 F-CPU's in the central configuration, as well as with all other SIPLUS extreme RAIL S7 F-CPU's, as an ET 200MP distributed I/O.

**Application**

Using fail-safe ET 200MP/S7-1500 modules makes it possible to implement safety-related application requirements as an integral part of the overall automation. The safety functions required for fail-safe operation are integrated in the modules. Communication with the fail-safe SIMATIC S7 CPUs is performed by means of PROFIsafe.

The modules can be operated both in centralized and distributed configurations.

**SIPLUS extreme RAIL F-digital output modules**

## Overview

SIPLUS extreme RAIL digital fail-safe output module:  
F-DQ 8x24 V DC 2 A PPM

Important properties:

- 8-channel digital fail-safe output module for ET 200MP/S7-1500
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Fail-safe 2-channel activation (parameterizable PM/PP switching) of actuators
- Actuators can be controlled up to 2 A

- Certified up to SIL 3 (IEC 61508), PL e (ISO 13849)
- LED display for error, operation, supply voltage and status
- Clear module labeling
  - Plain text identification of the module type
  - Complete Article No.
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Hardware and firmware version
- Optional labeling accessories
  - Labeling sheets, yellow
- The module supports PROFIsafe in both PROFIBUS and PROFINET configurations.
- Can be used with all fail-safe SIMATIC S7-1500 F-CPU's in the central configuration, as well as ET 200MP distributed I/O with all other SIMATIC S7 F-CPU's

## Application

Using fail-safe ET 200MP/S7-1500 modules makes it possible to implement safety-related application requirements as an integral part of the overall automation. The safety functions required for fail-safe operation are integrated in the modules. Communication with the fail-safe SIMATIC S7 CPUs is performed by means of PROFIsafe.

The modules can be operated both in centralized and distributed configurations.

## Technical specifications

Article number	<b>6AG2526-2BF00-1AB0</b> SIPLUS S7-1500 F-DQ 8x24VDC 2A T1 RAIL
<b>General information</b>	
Product type designation	F-DQ 8x24VDC/2A PPM
Operating mode	Yes
• DQ	Yes
<b>Supply voltage</b>	
Rated value (DC)	24 V
Reverse polarity protection	Yes
<b>Digital outputs</b>	
Type of digital output	Transistor
Number of digital outputs	8
Current-sinking	Yes
Current-sourcing	Yes
Short-circuit protection	Yes
Open-circuit detection	Yes
Overload protection	Yes
Limitation of inductive shutdown voltage to	PM-switching: -24 V + (-47 V), PP-switching: -24 V
Switching capacity of the outputs	
• with resistive load, max.	2 A
• on lamp load, max.	10 W
Load resistance range	
• lower limit	12 Ω
• upper limit	2 000 Ω
Output voltage	
• for signal "1", min.	24 V; L+ (-0.5 V)
Output current	
• for signal "1" rated value	2 A
• for signal "0" residual current, max.	0.5 A; Current-sourcing, or current sourcing and sinking switches individually, current sinking: max. 1 mA
Switching frequency	
• with resistive load, max.	30 Hz
• with inductive load, max.	0.1 Hz
• on lamp load, max.	10 Hz

**Application**

A range of performance-graded CPUs are available for the SIPLUS extreme RAIL ET 200SP:

**Standard CPUs**

- SIPLUS ET 200SP CPU 1510SP-1 PN RAIL:  
For smaller applications with average requirements regarding the program scope and processing speed, for distributed setup via PROFINET IO or PROFIBUS DP.
- SIPLUS ET 200SP CPU 1512SP-1 PN RAIL:  
For applications with average requirements regarding the program scope and processing speed, for distributed setup via PROFINET IO or PROFIBUS DP.

## SIPLUS RAIL

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

### SIPLUS extreme RAIL standard CPUs > SIPLUS ET 200SP CPU 1510SP-1 PN RAIL

#### Overview

- SIPLUS ET 200SP CPU 1510SP-1 PN RAIL for SIPLUS extreme RAIL ET 200SP based on SIPLUS S7-1500 CPU 1511-1 PN
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- For high-performance control solutions using ET 200SP
- Increase in availability of systems and machines
- PROFINET IO controller for up to 64 IO devices
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device with a SIMATIC or third-party PROFINET IO controller
- PROFINET shared I-device for 4 controllers
- PROFINET IO IRT interface with integrated 3-port switch
- Isochronous mode on PROFINET
- With multiple communication options: PG/OP communication, PROFINET IO, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7 communication (with loadable FBs)
- Optional PROFIBUS DP master for 125 PROFIBUS DP slaves (with CM DP module 6ES7545-5DA00-0AB0)
- Optional PROFIBUS DP slave (with CM DP module 6ES7545-5DA00-0AB0)
- Configuration control (option handling)
- Integrated motion control functionalities for controlling speed-controlled and positioning axes, support for external encoders

#### Note

SIMATIC Memory Card required for operation of the CPU. BusAdapter not included in scope of delivery and to be ordered separately.

#### Application

SIPLUS ET 200SP CPU 1510SP-1 PN RAIL is a cost-effective, entry-level CPU for applications with average requirements in terms of processing performance and response speed in discrete production technology. SIPLUS ET 200SP CPU 1510SP-1 PN RAIL can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 3-port switch enabling configuration of a linear topology in the system via port 1 and 2, such that a PG/PC or HMI device can also be connected via port 3.

When used as an I-device, the SIPLUS ET 200SP CPU 1510SP-1 PN RAIL facilitates distributed preprocessing of process data locally and only delivers the information actually required to the higher-level controller. This has the following advantages:

- Less load on central controller
- Short response times to critical local signals
- Less load on the bus system due to smaller data volumes
- Faster commissioning due to pre-tested units and parallel commissioning
- Increased availability and flexibility thanks to autonomous machine units
- Transparent configuration

The SIPLUS ET 200SP CPU 1510SP-1 PN RAIL operates completely independently of the central controller. If it fails, the SIPLUS ET 200SP CPU 1510SP-1 PN RAIL continues to run.

The bit-modular design of the ET 200SP I/O system, together with SIPLUS ET 200SP CPU 1510SP-1 PN RAIL, enables functionally oriented station design.

In addition, the CPU offers comprehensive control functionalities via easy-to-configure blocks as well as the ability to connect drives via standardized PLC-open blocks.

#### Design

The SIPLUS ET 200SP CPU 1510SP-1 PN CPU RAIL is directly snapped onto the standard DIN rail and features:

- A powerful processor:  
The CPU achieves command execution times as low as 72 ns per binary instruction.
- A large work memory:  
100 KB for program, 750 KB for data
- SIMATIC Memory Cards as load memories  
Permits additional functions such as firmware updates, data-log and archives
- Bit-modular expandability for maximum flexibility  
Up to 64 I/O modules (I/O, technology, and communication modules) in any combination. Station width up to 1 m.
- Mixed configuration with ET 200AL  
Possible to integrate up to 16 I/O modules of the ET 200AL (IP65/IP67) I/O system in a scalable I/O system ET 200SP (IP20) installation via a "BU-Send" BaseUnit and a "BA-Send" BusAdapter.
- PROFINET IO IRT interface with 3 integrated switch ports:
  - Port 1 and 2 via BusAdapter (SIPLUS ET 200SP CPU 1510SP-1 PN CPU RAIL is supplied without the BusAdapter and can also be operated without it. An appropriate BusAdapter can be ordered separately if needed)
  - Port 3 via integrated RJ45 socket
- Integrated communication functions:
  - PG/OP communication
  - PROFINET IO
  - Open IE communication (TCP, ISO-on-TCP and UDP)
  - OPC UA server (data access)
  - Web server
  - S7 communication
  - S7 routing
  - Data set routing
- Maintenance-free data backup without battery
- Diagnostics displays for errors (Error), operation (RUN/Stop), maintenance (MT), power supply (PWR) and one link LED per port

### SIPLUS extreme RAIL standard CPUs > SIPLUS ET 200SP CPU 1510SP-1 PN RAIL

- Optional labeling using light gray or yellow labeling strips.  
Choice of 2 materials:
    - Foil and roll with 500 strips, for thermal transfer roll printers
    - Paper (280 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printers
  - The ET 200SP CPU can be equipped with a reference ID label
  - Different PROFINET connection types by means of Bus-Adapter
    - SIMATIC BusAdapters with an RJ45 interface, e.g. Bus-Adapter BA 2xRJ45, can be used in standard applications with moderate mechanical and low EMC loads
    - For machines and systems in which higher mechanical and/or EMC loads act on the devices, SIMATIC BusAdapters with connection via FastConnect (FC) are recommended.
    - The use of SIMATIC BusAdapters with a FO cable connection (SCRJ, LC) is not possible with the SIPLUS ET 200SP CPU 1510SP-1 PN CPU RAIL.
  - Dark BaseUnit as first BaseUnit behind the ET 200SP CPU when using an AC I/O module or an AI Energy Meter ST as the first I/O module
- Scope of delivery:  
SIPLUS ET 200SP CPU 1510SP-1 PN CPU RAIL including server module, 24 V DC connector and cover for BusAdapter port (BusAdapter must be ordered separately)
- 
- #### Function
- Performance
    - High-speed command processing
    - Powerful network connection:  
CPU is equipped with a PROFINET IO IRT (3-port switch) as the standard interface
  - Integrated technology
    - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
    - Support of speed-controlled and positioning axes as well as external encoders
    - Precise position gearing for synchronous operation between axes
    - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection
    - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
  - Isochronous mode
    - Synchronous coupling of distributed signal acquisition, signal transmission, and program execution to the PROFINET cycle with constant bus cycle time
  - Security Integrated
    - Password-based know-how protection against unauthorized read-out and modification of program blocks
    - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured memory card is inserted into the CPU.
    - 4-level authorization concept:  
Communication to the HMI devices can also be restricted.
    - Manipulation protection:  
The controller recognizes changed or unauthorized transmissions of the engineering data.
  - Integrated system diagnostics
    - System diagnostics information is displayed consistently and in plain text in the TIA Portal, HMI devices and Web server, even for messages from the drives, and is updated even if the CPU is in STOP mode.
    - Integrated into the firmware of the CPU, no special configuration is required
  - Configuration control (option handling) in central setup
    - Various hardware configurations can be stored in the controller:  
Modification of the configuration in the user program (startup OB100)  
Retrofitting of options at end of configuration  
Use of placeholder modules is possible.
  - SIMATIC Memory Card (required for operation of the CPU)
    - Used as a plug-in load memory or for updating the firmware.
    - Also for storing additional documents or csv files (for recipes and archives)
    - Creation of data blocks for storage/reading of data via SFCs of the user program
  - Datalog (archives) and recipes
    - Storage of csv files for recipes and archives on the SIMATIC Memory Card;  
easy access to plant-relevant operating data using Office tools or via a Web server
    - Easy access to machine configuration data by means of a Web browser or SD card reader (two-way data exchange from and to the controller)
  - Programming
    - Programming with STEP 7 Professional, V13 update 3 and higher

### Selection and ordering data

Version	Article No.
<b>SIPLUS ET 200SP CPU 1510SP-1 PN T1 RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic Work memory 100 KB for program, 750 KB for data, PROFINET IO IRT interface; SIMATIC Memory Card required For areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -25 ... +55 °C (+70 °C for 10 min.)	<b>6AG2510-1DJ01-1AB0</b>
<b>SIPLUS ET 200SP CPU 1510SP-1 PN TX RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic Work memory 100 KB for program, 750 KB for data, PROFINET IO IRT interface; SIMATIC Memory Card required For areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2510-1DJ01-4AB0</b>
<b>Accessories</b>	
<b>SIPLUS ET 200SP BA 2XRJ45 TX RAIL BusAdapter</b> For PROFINET interface modules in Standard function class or above; max. cable length 50 m; For areas with extreme exposure to environmental substances (conformal coating) Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2193-6AR00-4AA0</b>
<b>SIPLUS ET 200SP BA 2XFC TX RAIL BusAdapter</b> For PROFINET interface modules in Standard function class or above; for increased vibration and EMC load rating; max. cable length 50 m; for areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2193-6AF00-4AA0</b>
<b>SIPLUS Mounting Kit ET 200SP</b> Mounting accessories for use with increased mechanical vibration and shock loads. Not approved for SIPLUS CPU 6AG2510-1DJ01-4AB0 and BusAdapter BA 2xRJ45	<b>6AG1193-6AA00-0AA0</b>

## SIPLUS RAIL

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

### SIPLUS extreme RAIL standard CPUs > SIPLUS ET 200SP CPU 1512SP-1 PN RAIL

#### Overview

- SIPLUS ET 200SP CPU 1512SP-1 PN RAIL for SIPLUS extreme RAIL ET 200SP based on SIPLUS S7-1500 CPU 1513-1 PN
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- For applications with average requirements regarding the program scope and processing speed, for distributed setup via PROFINET IO or PROFIBUS DP
- Increase in availability of systems and machines
- PROFINET IO controller for up to 128 IO devices
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device with a SIMATIC or third-party PROFINET IO controller
- PROFINET shared I-device for 4 controllers
- PROFINET IO IRT interface with integrated 3-port switch
- Isochronous mode on PROFINET
- With multiple communication options: PG/OP communication, PROFINET IO, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7 communication (with loadable FBs)
- Optional PROFIBUS DP master for 125 PROFIBUS DP slaves (with CM DP module 6ES7545-5DA00-0AB0)
- Optional PROFIBUS DP slave (with CM DP module 6ES7545-5DA00-0AB0)
- Configuration control (option handling)
- Integrated motion control functionalities for controlling speed-controlled and positioning axes, support for external encoders

#### Note

SIMATIC Memory Card required for operation of the CPU.  
BusAdapter not included in scope of delivery and to be ordered separately.

#### Application

SIPLUS ET 200SP CPU 1512SP-1 PN RAIL is designed for applications with average requirements in terms of processing performance and response speed in discrete production technology. SIPLUS ET 200SP CPU 1512SP-1 PN RAIL can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 3-port switch enabling configuration of a linear topology in the system via port 1 and 2, such that a PG/PC or HMI device can also be connected via port 3.

When used as an I-device, the SIPLUS ET 200SP CPU 1512SP-1 PN RAIL facilitates local preprocessing of process data and only delivers the information actually required to the higher-level controller. This has the following advantages:

- Less load on central controller
- Short response times to critical local signals
- Less load on the bus system due to smaller data volumes
- Faster commissioning due to pre-tested units and parallel commissioning
- Increased availability and flexibility thanks to autonomous machine units
- Transparent configuration

The SIPLUS ET 200SP CPU 1512SP-1 PN RAIL operates completely independently of the central controller. If it fails, the SIPLUS ET 200SP CPU 1512SP-1 PN RAIL continues to run.

The bit-modular design of the ET 200SP I/O system, together with SIPLUS ET 200SP CPU 1512SP-1 PN RAIL, enables functionally oriented station design.

In addition, the CPU offers comprehensive control functionalities via easy-to-configure blocks as well as the ability to connect drives via standardized PLC-open blocks.

#### Design

The SIPLUS ET 200SP CPU 1512SP-1 PN CPU RAIL is directly snapped onto the standard DIN rail and features:

- Powerful processor:  
CPU achieves command execution times as low as 48 ns per binary instruction.
- Large work memory:  
200 KB for programs, 1 MB for data
- SIMATIC Memory Cards as load memories  
Permits additional functions such as firmware updates, data-log and archives
- Bit-modular expandability for maximum flexibility  
Up to 64 I/O modules (I/O, technology, and communication modules) in any combination. Station width up to 1 m.
- Mixed configuration with ET 200AL  
Possible to integrate up to 16 I/O modules of the ET 200AL (IP65/IP67) I/O system in a scalable I/O system ET 200SP (IP20) installation via a "BU-Send" BaseUnit and a "BA-Send" BusAdapter.
- PROFINET IO IRT interface with 3 integrated switch ports:
  - Port 1 and 2 via BusAdapter (SIPLUS ET 200SP CPU 1512SP-1 PN CPU RAIL is supplied without the BusAdapter and can also be operated without it. An appropriate BusAdapter can be ordered separately if needed)
  - Port 3 integrated RJ45 socket
- Integrated communication functions:
  - PG/OP communication
  - PROFINET IO
  - Open IE communication (TCP, ISO-on-TCP and UDP)
  - OPC UA server (data access)
  - Web server
  - S7 communication
  - S7 routing
  - Data set routing
- Maintenance-free data backup without battery
- Diagnostics displays for errors (Error), operation (RUN/Stop), maintenance (MT), power supply (PWR) and one link LED per port

### SIPLUS extreme RAIL standard CPUs > SIPLUS ET 200SP CPU 1512SP-1 PN RAIL

- Optional labeling using light gray or yellow labeling strips.  
Choice of 2 materials:
    - Foil and roll with 500 strips, for thermal transfer roll printers
    - Paper (280 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printers
  - The ET 200SP CPU can be equipped with an equipment labeling plate.
  - Different PROFINET connection types by means of Bus-Adapter
    - SIMATIC BusAdapters with an RJ45 interface, e.g. Bus-Adapter BA 2xRJ45, can be used in standard applications with moderate mechanical and low EMC loads
    - For machines and systems in which higher mechanical and/or EMC loads act on the devices, a SIMATIC Bus-Adapter with connection via FastConnect (FC) or FO cable (SCRJ or LC) is recommended. Likewise, all SIMATIC Bus-Adapters with an FO cable connection (SCRJ, LC) can be used with increased loads.
    - BusAdapters with connections for FO cables can be used to cover high potential differences between two stations and/or with high EMC loads.
  - Dark BaseUnit as first BaseUnit behind the ET 200SP CPU when using an AC I/O module or an AI Energy Meter ST as the first I/O module.
- Scope of delivery:  
CPU 1512SP-1 PN including server module, 24 V DC connector and cover for BusAdapter port (BusAdapter must be ordered separately).
- 
- #### Function
- Performance
    - High-speed command processing
    - Powerful network connection:  
CPU is equipped with a PROFINET IO IRT (3-port switch) as the standard interface
  - Integrated technology
    - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
    - Support of speed-controlled and positioning axes as well as external encoders
    - Precise position gearing for synchronous operation between axes
    - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection
    - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
  - Isochronous mode
    - Synchronous coupling of distributed signal acquisition, signal transmission, and program execution to the PROFINET cycle with constant bus cycle time
  - Security Integrated
    - Password-based know-how protection against unauthorized read-out and modification of program blocks
    - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured memory card is inserted into the CPU.
    - 4-level authorization concept: Communication to the HMI devices can also be restricted.
    - Manipulation protection: The controller recognizes changed or unauthorized transmissions of the engineering data.
  - Integrated system diagnostics
    - System diagnostics information is displayed consistently and in plain text in the TIA Portal, HMI devices and Web server, even for messages from the drives, and is updated even if the CPU is in STOP mode.
    - Integrated into the firmware of the CPU, no special configuration is required
  - Configuration control (option handling) in central setup
    - Various hardware configurations can be stored in the controller:  
Modification of the configuration in the user program (startup OB100)  
Retrofitting of options at end of configuration  
Use of placeholder modules is possible.
  - SIMATIC Memory Card (required for operation of the CPU)
    - Used as a plug-in load memory or for updating the firmware.
    - Also for storing additional documents or csv files (for recipes and archives)
    - Creation of data blocks for storage/reading of data via SFCs of the user program
  - Datalog (archives) and recipes
    - Storage of csv files for recipes and archives on the SIMATIC Memory Card;  
easy access to plant-relevant operating data using Office tools or via a Web server
    - Easy access to machine configuration data by means of a Web browser or SD card reader (two-way data exchange from and to the controller)
  - Programming
    - Programming with STEP 7 Professional, V13 update 3 and higher

Version	Article No.
<b>SIPLUS ET 200SP CPU 1512SP-1 PN T1 RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic Work memory 200 KB for program, 1 MB for data, PROFINET IO IRT interface; SIMATIC Memory Card required For areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -25 ... +60 °C (+70 °C for 10 min.)	<b>6AG2512-1DK01-1AB0</b>
<b>SIPLUS ET 200SP CPU 1512SP-1 PN TX RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic Work memory 100 KB for program, 750 KB for data, PROFINET IO IRT interface; SIMATIC Memory Card required For areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2512-1DK01-4AB0</b>
<b>Accessories</b>	
<b>SIPLUS ET 200SP BA 2XRJ45 TX RAIL BusAdapter</b> For PROFINET interface modules in Standard function class or above; max. cable length 50 m; For areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2193-6AR00-4AA0</b>
<b>SIPLUS ET 200SP BA 2XFC TX RAIL BusAdapter</b> For PROFINET interface modules in Standard function class or above; for increased vibration and EMC load rating; max. cable length 50 m; for areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2193-6AF00-4AA0</b>
<b>SIPLUS Mounting Kit ET 200SP</b> Mounting accessories for use with increased mechanical vibration and shock loads. Not approved for SIPLUS CPU 6AG2510-1DJ01-4AB0 and BusAdapter BA 2xRJ45	<b>6AG1193-6AA00-0AA0</b>

## SIPLUS RAIL

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

### SIPLUS extreme RAIL fail-safe CPUs

#### Overview

- 2 fail-safe, performance graded CPUs based on SIPLUS extreme RAIL ET 200SP:
  - SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL
  - SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL

Features	SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL	SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL
<b>Work memory for program, integrated</b>	150 KB	300 KB
<b>Work memory for data, integrated</b>	750 KB	1 MB
<b>Load memory</b>	Plug-in via SIMATIC Memory Card, max. 32 GB	Plug-in via SIMATIC Memory Card, max. 32 GB
<b>Command execution times</b>		
• Bit operations	72 ns	48 ns
• Word operations	86 ns	58 ns
• Fixed-point operations	115 ns	77 ns
• Floating-point operations	461 ns	307 ns
<b>Integral interfaces</b>		
• PROFINET IO IRT	1 x PN IO IRT (3-port switch)	1 x PN IO IRT (3-port switch)
• PROFIBUS DP	Yes (via CM DP)	Yes (via CM DP)
<b>Standards, approvals, certificates</b>	SIL 2 acc. to EN 50126, 50128, 50129	SIL 2 acc. to EN 50126, 50128, 50129

#### Application

A range of fail-safe, performance-graded CPUs are available for the SIPLUS extreme RAIL ET 200SP:

##### Fail-safe CPUs

- SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL:  
The entry-level CPU for standard and fail-safe applications with average requirements in terms of processing performance and response speed in discrete production technology. SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device).
- SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL:  
The CPU for standard and fail-safe applications with average requirements in terms of processing performance and response speed in discrete production technology. SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device).

#### Overview

- SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL for SIPLUS extreme RAIL ET 200SP based on S7-1500 CPU 1511F-1 PN
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- For high-performance control solutions using ET 200SP
- Increase in availability of systems and machines
- Supports PROFIsafe in centralized and distributed configurations
- PROFINET IO controller for up to 64 IO devices
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device with a SIMATIC or third-party PROFINET IO controller
- PROFINET shared I-device for 4 controllers
- PROFINET IO IRT interface with integrated 3-port switch
- Isochronous mode on PROFINET
- With multiple communication options:  
PG/OP communication, PROFINET IO, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7 communication (with loadable FBs)
- Configuration control (option handling)
- Integrated motion control functions for controlling speed-controlled and positioning axes, support for external encoders

#### Application

SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL is a cost-effective entry-level CPU for standard and fail-safe applications with average requirements in terms of processing performance and response speed in discrete production technology. SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 3-port switch enabling configuration of a linear topology in the system via port 1 and 2, such that a PG/PC or HMI device can also be connected via port 3.

When used as an I-device, the SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL enables distributed preprocessing of process data locally and only delivers the information actually required to the higher-level controller. This has the following advantages:

- Less load on central controller
- Short response times to critical local signals
- Less load on the bus system due to smaller data volumes
- Faster commissioning due to pre-tested units and parallel commissioning
- Increased availability and flexibility due to autonomous machine units
- Easy-to-understand configuration

SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL operates fully independently of the central controller. If the controller fails, the CPU simply continues to operate.

The bit-modular design of the ET 200SP I/O system, together with the SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL, enables functionally oriented station design.

In addition, the CPU offers comprehensive control functionalities via easy-to-configure blocks as well as the ability to connect drives via standardized PLC-open blocks.

#### Design

SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL is snapped directly onto the standard DIN rail and features:

- A high-performance processor; the CPU achieves command execution times as low as 72 ns per binary instruction
- Extensive work memory: 150 KB for program, 750 KB for data
- SIMATIC Memory Cards as load memory; permitting additional functions such as firmware update, datalog and archiving
- Bit-modular expandability for maximum flexibility; up to 64 I/O modules (I/O, technology, and communications modules) in any combination. Station width up to 1 m.
- PROFINET IO IRT interface with 3 integrated switch ports:
  - Port 1 and 2 via BusAdapter (SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL is supplied without the BusAdapter and can also be operated without it). The appropriate BusAdapter (BA 2xRJ45 or BA 2xFC) is to be ordered separately if needed.
  - Port 3 via integrated RJ45 socket.
- Integrated communication functions:
  - PG/OP communication
  - PROFINET IO
  - Open IE communication (TCP, ISO-on-TCP and UDP)
  - Web server
  - S7 communication
  - S7 routing
  - Data set routing
- Maintenance-free data backup without battery
- Diagnostics displays for errors (Error), operation (RUN/Stop), maintenance (MT), power supply (PWR) and one link LED per port
- Optional labeling using light gray or yellow labeling strips. There is a choice of 2 materials:
  - Foil and roll with 500 strips, for thermal transfer roll printer
  - Paper (280 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printer
- The ET 200SP CPU can be equipped with a reference ID label.

**SIPLUS RAIL**

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

**SIPLUS extreme RAIL fail-safe CPUs > SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL**

- Different PROFINET connection types by means of Bus-Adapter:
  - Under standard ambient conditions, BA 2xRJ45 for connection via RJ45 plug
  - In the case of mechanical loading during operation and/or an increased EMC requirements BA 2xFC for direct connection of the PROFINET cable
- Dark BaseUnit as first BaseUnit behind the ET 200SP CPU when using an AC I/O module or an AI Energy Meter ST as the first I/O module

Scope of delivery

SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL including server module, 24 V DC connector and cover for BusAdapter port (BusAdapter must be ordered separately)

**Function**

- Performance
  - High-speed command processing
  - High-performance network connection: CPU comes equipped with a PROFINET IO IRT interface (3-port switch) as standard.
- Integrated technology
  - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
  - Support of speed-controlled and positioning axes as well as external encoders
  - Precise position gearing for synchronous operation between axes
  - Trace functions for all CPU tags, both for diagnostics in real time and for sporadic error detection
  - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
- Isochronous mode
  - Synchronous coupling of distributed signal acquisition, signal transmission, and program execution to the PROFINET cycle with constant bus cycle time
- Security Integrated
  - Password-based know-how protection against unauthorized read-out and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured Memory Card is inserted in the CPU.
  - 4-stage authorization concept: Communication to operator panels can also be restricted.
  - Manipulation protection: The controller recognizes changed or unauthorized transmissions of the engineering data.
- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the TIA Portal, operator panels and web server, even for messages from the drives, and updated even if the CPU is in STOP mode.
  - Integrated in the firmware of the CPU, no special configuration is required
- Configuration control (option handling) in central setup
  - Various hardware configurations can be stored in the PLC: Modification of the configuration in the user program (startup OB100), Retrofitting of options at end of configuration; Use of placeholder modules is possible.
- SIMATIC Memory Card (required for operation of the CPU)
  - Used as plug-in load memory or for updating the firmware
  - Also for storing additional documents or csv files (for recipes and archives)
  - Creation of data blocks and storage/reading of data via SFCs of the user program
- Datalog (archives) and recipes
  - Storage of csv files for recipes and archives on the SIMATIC Memory Card; easy access to plant-relevant operating data using Office tools and via web server.
  - Easy access to configuration data of the machine by means of a web browser or SD card reader (two-way data exchange from and to the PLC)
- Programming of the standard program section
  - Programming with STEP 7 Professional, V13 SP1 and higher
- Programming of the fail-safe program section
  - Programming of the safety-related program section with the "STEP 7 Safety Advanced" option package.

Version	Article No.
<b>SIPLUS ET 200SP CPU 1510SP F-1 PN T1 RAIL</b> (Extended temperature range and exposure to environmental substances) Work memory 150 KB for program, 750 KB for data, PROFINET IO IRT interface; SIMATIC Memory Card required; for areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -25 ... +60 °C (+70 °C for 10 min.)	<b>6AG2510-1SJ01-1AB0</b>
<b>Accessories</b>	
<b>SIPLUS extreme RAIL BusAdapter</b> <b>SIPLUS ET 200SP BA 2XRJ45 TX RAIL</b> For PROFINET interface modules in Standard function class or above; max. cable length 50 m; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2193-6AR00-4AA0</b>
<b>SIPLUS ET 200SP BA 2XFC TX RAIL</b> For PROFINET interface modules in Standard function class or above; for increased vibration and EMC load rating; max. cable length 50 m; for areas with extreme exposure to environmental substances (conformal coating); ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2193-6AF00-4AA0</b>
<b>SIPLUS Mounting Kit ET 200SP</b> Mounting accessories for use with increased mechanical vibration and shock loads. Not approved for SIPLUS BusAdapter BA 2xRJ45	<b>6AG1193-6AA00-0AA0</b>

\* You can order this quantity or a multiple thereof.

## SIPLUS RAIL

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

### SIPLUS extreme RAIL fail-safe CPUs > SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL

#### Overview

- SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL for SIPLUS extreme RAIL ET 200SP based on S7-1500 CPU 1513F-1 PN
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- For applications with average requirements regarding the program scope and processing speed, for distributed setup via PROFINET IO or PROFIBUS DP
- Increase in availability of systems and machines
- Supports PROFIsafe in centralized and distributed configurations
- PROFINET IO controller for up to 128 IO devices
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device with a SIMATIC or third-party PROFINET IO controller
- PROFINET shared I-device for 4 controllers
- PROFINET IO IRT interface with integrated 3-port switch
- Isochronous mode on PROFINET
- With multiple communication options: PG/OP communication, PROFINET IO, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7 communication (with loadable FBs)
- Configuration control (option handling)
- Integrated motion control functions for controlling speed-controlled and positioning axes, support for external encoders

#### Application

SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL for standard and fail-safe applications with average requirements in terms of processing performance and response speed in discrete production technology. SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL can be used as a PROFINET IO controller or as distributed intelligence (PROFINET I-Device). The integrated PROFINET IO IRT interface is designed as a 3-port switch enabling configuration of a linear topology in the system via port 1 and 2, such that a PG/PC or HMI device can also be connected via port 3.

When used as an I-device, the SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL enables distributed preprocessing of process data locally and only delivers the information actually required to the higher-level controller. This has the following advantages:

- Less load on central controller
- Short response times to critical local signals
- Less load on the bus system due to smaller data volumes
- Faster commissioning due to pre-tested units and parallel commissioning
- Increased availability and flexibility due to autonomous machine units
- Easy-to-understand configuration

SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL operates fully independently of the central controller. If the controller fails, the CPU simply continues to operate.

The bit-modular design of the ET 200SP I/O system, together with SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL, enables functionally oriented station design.

In addition, the CPU offers comprehensive control functionalities via easy-to-configure blocks as well as the ability to connect drives via standardized PLCopen blocks.

#### Design

SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL is directly snapped onto the DIN rail and features:

- A high-performance processor; the CPU achieves command execution times as low as 48 ns per binary instruction
- Extensive work memory: 300 KB for program, 1 MB for data
- SIMATIC Memory Cards as load memory; permitting additional functions such as firmware update, datalog and archiving
- Bit-modular expandability for maximum flexibility; up to 64 I/O modules (I/O, technology, and communications modules) in any combination. Station width up to 1 m.
- PROFINET IO IRT interface with 3 integrated switch ports:
  - Port 1 and 2 via BusAdapter (SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL is supplied without the BusAdapter and can also be operated without it). The appropriate BusAdapter (BA 2xRJ45 or BA 2xFC) is to be ordered separately if needed.
  - Port 3 via integrated RJ45 socket.
- Integrated communication functions:
  - PG/OP communication
  - PROFINET IO
  - Open IE communication (TCP, ISO-on-TCP and UDP)
  - Web server
  - S7 communication
  - S7 routing
  - Data set routing
- Maintenance-free data backup without battery
- Diagnostics displays for errors (Error), operation (RUN/Stop), maintenance (MT), power supply (PWR) and one link LED per port
- Optional labeling using light gray or yellow labeling strips. There is a choice of 2 materials:
  - Foil and roll with 500 strips, for thermal transfer roll printer
  - Paper (280 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printer
- The ET 200SP CPU can be equipped with a reference ID label.

### SIPLUS extreme RAIL fail-safe CPUs > SIPLUS ET 200SP CPU 1512SP F-1 PN T1 RAIL

- Different PROFINET connection types by means of Bus-Adapter:
    - Under standard ambient conditions, BA 2xRJ45 for connection via RJ45 plug
    - In the case of mechanical loading during operation and/or an increased EMC requirements BA 2xFC for direct connection of the PROFINET cable
  - Dark BaseUnit as first BaseUnit behind the ET 200SP CPU when using an AC I/O module or an AI Energy Meter ST as the first I/O module
- Scope of delivery
- SIPLUS ET 200SP CPU 1512SP F-1 PN RAIL including server module, 24 V DC connector and cover for BusAdapter port (BusAdapter must be ordered separately)

#### Function

- Performance
  - High-speed command processing
  - High-performance network connection: CPU comes equipped with a PROFINET IO IRT interface (3-port switch) as standard.
- Integrated technology
  - Connection of analog and PROFIdrive-capable drives via standardized blocks (PLCopen)
  - Support of speed-controlled and positioning axes as well as external encoders
  - Precise position gearing for synchronous operation between axes
  - Trace functions for all CPU tags, both for diagnostics in real time and for sporadic error detection
  - Comprehensive control functionalities, e.g. easily configurable blocks for automatic optimization of the control parameters for optimum control quality
- Isochronous mode
  - Synchronous coupling of distributed signal acquisition, signal transmission, and program execution to the PROFINET cycle with constant bus cycle time
- Security Integrated
  - Password-based know-how protection against unauthorized read-out and modification of program blocks
  - Copy protection for tying individual blocks to the serial number of the SIMATIC Memory Card: The block can only run if the configured Memory Card is inserted in the CPU.
  - 4-stage authorization concept: Communication to operator panels can also be restricted.
  - Manipulation protection: The controller recognizes changed or unauthorized transmissions of the engineering data.
- Integrated system diagnostics
  - System diagnostics information is displayed consistently and in plain text in the TIA Portal, operator panels and web server, even for messages from the drives, and updated even if the CPU is in STOP mode.
  - Integrated in the firmware of the CPU, no special configuration is required
- Configuration control (option handling) in central setup
  - Various hardware configurations can be stored in the PLC: Modification of the configuration in the user program (startup OB100), Retrofitting of options at end of configuration; Use of placeholder modules is possible.
- SIMATIC Memory Card (required for operation of the CPU)
  - Used as plug-in load memory or for updating the firmware
  - Also for storing additional documents or csv files (for recipes and archives)
  - Creation of data blocks and storage/reading of data via SFCs of the user program
- Datalog (archives) and recipes
  - Storage of csv files for recipes and archives on the SIMATIC Memory Card; easy access to plant-relevant operating data using Office tools and via web server.
  - Easy access to configuration data of the machine by means of a web browser or SD card reader (two-way data exchange from and to the PLC)
- Programming of the standard program section
  - Programming with STEP 7 Professional, V13 SP1 and higher
- Programming of the fail-safe program section
  - Programming of the safety-related program section with the "STEP 7 Safety Advanced" option package.

## SIPLUS RAIL

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

### SIPLUS extreme RAIL Open Controller

#### Overview

##### Compact and powerful

SIPLUS ET 200SP RAIL Open Controller, SIPLUS CPU 1515SP PC RAIL is a rugged, compact control system that combines the functionality of a SIPLUS ET 200SP RAIL controller with a PC-based platform. It can be used to control special-purpose and series machines, or plants in a distributed configuration.

The SIPLUS ET 200SP RAIL I/O modules can be inserted centrally and communicate via the integrated backplane bus. S7 communication can be established and distributed I/Os can be

connected via the PROFINET adapter of the SIPLUS ET 200SP system. The PROFIBUS CM DP module provides simple expandability for PROFIBUS communication.

The SIPLUS CPU 1515SP PC2 RAIL is used wherever special automation functions are to be integrated with support from SIMATIC ODK 1500S via the programming language C or C++, or if a close connection of independent applications is required in Windows for the software controller.

Characteristics	SIPLUS CPU 1515SP PC2 RAIL
<b>DDR3 DRAM</b>	8 GB
<b>CFast card</b>	30 GB
<b>Operating system</b>	Windows 10 Enterprise LTSC 2016
<b>Work memory for program, integrated</b>	1 MB (1.5 MB for F)
<b>Work memory for data, integrated</b>	5 MB
<b>Load memory</b>	320 MB
<b>Command execution times</b>	
• Bit operations	10 ns
• Word operations	12 ns
• Fixed-point operations	16 ns
• Floating-point operations	64 ns
<b>Bit memories, timers, counters</b>	
• S7 counters/timers	2048
• IEC counter	Arbitrary (only limited by the work memory)
• IEC timer	Arbitrary (only limited by the work memory)
• Bit memories	16 KB
<b>I/O address range</b>	
• Inputs	32 KB (all inputs are stored in the process image)
• Outputs	32 KB (all inputs are stored in the process image)
<b>Motion</b>	
• Motion control resources	2400
<b>Communication</b>	
• PiP	Yes (via CM)
• PROFINET IO	1 x PN IO IRT (BusAdapter not included in scope of delivery)
• PROFIBUS DP	Yes (via CM DP)
• Web server	Yes
• GB Ethernet	Yes, 1 x via GB Ethernet RJ45 interface

#### Application

##### ET 200SP Open Controller

##### Compact dimensions

The open controller is a particularly compact and energy-efficient controller for the DIN rail. Thanks to its minimal size, it can be used in extremely confined spaces. Signals can be detected centrally via the backplane bus or distributed via PROFIBUS or PROFINET.

##### Rugged design

All designs aim to achieve maximum safety in the case of vibration and shock loads. With its fan-free design and the use of CFast cards (flash memory), the open controller is particularly suitable for maintenance-free 24/7 continuous operation in the industrial environment, at temperatures of up to 60 degrees Celsius.

##### Interfaces

The open controller is connected to the controllers/cell levels via the integrated onboard Ethernet interfaces. I/O data communication can be implemented via PROFINET using a BusAdapter or an optional PROFIBUS CM-DP module. External monitors or displays can be connected via a DVI-I or DisplayPort interface.

##### Flexibility

The open controller has CE certification for use in industrial and domestic/commercial environments and can therefore be used in building automation or public installations in addition to industrial applications.

##### Continuity

The open controller offers a new part availability of at least three years. Moreover, a spare part availability of at least another five years is guaranteed. This is a unique long-term availability for PC technology which is unprecedented in the industry.

##### System availability

The open controller is delivered ready-for-use in various bundle variants. The high system availability by design can be further extended by means of additional data backup options (e.g. SIMATIC IPC Image & Partition Creator) and efficient software for self-diagnostics (SIMATIC IPC DiagMonitor).

**More information*****Further information and downloads***Manuals

## SIPLUS RAIL

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

### SIPLUS extreme RAIL Open Controller > SIPLUS ET 200SP CPU 1515SP PC2 RAIL

#### Overview

SIPLUS extreme RAIL Open Controller, SIPLUS ET 200SP CPU 1515SP PC2 RAIL, combines robustness and compact dimensions with the flexibility of centralized or decentralized communication in the highest industrial functionality. Furthermore, the CPU offers the entire value added of the SIPLUS ET 200SP system, the SIPLUS S7-1500 controller family and the TIA world together.

- Rugged, compact control system
- Combines the functions of a SIPLUS ET 200SP controller with those of a PC-based platform
- Turnkey all-in-one controller
- High performance automation tasks with the use of new generation Intel Quad Core processors
- Connects high-level language applications and processes high data volumes with support from SIMATIC ODK 1500S

#### Application

The SIPLUS ET 200SP CPU 1515SP PC2 RAIL can be used to control special and series machines as well as plants in a centralized or distributed configuration. The standard and fail-safe user program is generated in the TIA Portal. The controller is especially suitable for machines with high data volumes, e.g. for quality assurance with camera inspection and image transmission, or printer connection.

The SIPLUS ET 200SP CPU 1515SP PC2 RAIL shows its strength in particular:

- When special automation functions have to be integrated using the C or C++ programming languages
- When a close connection of Windows software to the software controller is required
- When large volumes of data have to be stored

#### Design

The SIPLUS ET 200SP CPU 1515SP PC2 RAIL is mounted on the standard DIN rail like all SIPLUS ET 200SP CPUs.

The SIPLUS ET 200SP I/O modules can be used directly and centrally, and they communicate via the integrated backplane bus.

PN IO and S7 communication can be established and distributed I/Os can be connected via the PROFINET BusAdapters of the SIPLUS ET 200SP system (not included in scope of supply). This way, the system can be integrated into existing automation environments with little effort.

The PROFIBUS CM DP module extends the SIPLUS ET 200SP CPU 1515SP PC2 RAIL to include PROFIBUS communication.

The following interfaces are available:

- 1 x Gb Ethernet
- 1 x PN IO interface via SIPLUS ET 200SP BusAdapter with 2 ports
- 2 x USB 2.0 / 2x USB 3.0 at the front, for connecting a keyboard, mouse and USB flash drive, for example
- 1 x display port, for connecting a SIMATIC Flat Panel or multi-touch device, for example

The CPU also features the following:

- Mode switch
- Replaceable mass storage CFast with security seal
- Additional memory slot for SD/MMC
- Status LEDs
- Connection for 24 V DC supply voltage

#### Function

- Configuring and programming with the STEP 7 engineering tool (and WinCC Advanced for the HMI option) in the TIA Portal:
  - Programmable according to IEC 61131-3
  - Supported programming languages: SCL (IL), LAD, FBD, STL, GRAPH7 (SFC)
- Innovative real-time system based on visualization technology:
  - The real-time system of the integrated S7-1500 software controllers enables parallel operation independent of the operating system:
    - Maximum real-time and deterministic properties
    - Supports restart of Windows while the controller is in operation
- High-speed program execution with multiple priority-controlled execution levels (cyclic, time-controlled, isochronous with PROFINET or PROFIBUS, event-driven via process and diagnostics alarms)
- Saving of retentive data:
  - The SIPLUS ET 200SP CPU 1515SP PC2 RAIL ensures the security of the plant data, even when the power fails:
    - Saving of retentive data on the NVRAM of the CPU possible during voltage dips (default)
    - Retentive data storage possible on CPU CFast card (UPS required)
- Communication:
  - PROFINET IO communication via the ET 200SP BusAdapter; PROFIBUS communication via ET 200SP CM DP; PROFINET IO RT/IRT, isochronous mode, IO controller, I-device, media redundancy, PROFIenergy, PROFIBUS DP master
  - SIMATIC and open user communication with Windows applications or external devices via the Windows interfaces (Gb Ethernet) of the CPU
- Configuration control (option handling) for flexible variations of the central configuration
  - Configuration of a controller and operation of variants (options) that differ from this configuration
- Integrated web server:
  - Scanning the CPU via the web server is supported by all CPUs of the S7-1500 automation system. The CPU web server offers the following diagnostics options:
    - Image of the CPU with LEDs and the current operating state
    - Readout of the diagnostics buffer entries
    - Query of module status
    - Query of current messages
    - Information on the status of the topology/PROFINET devices
    - Transfer and management of user data on the load memory of the CPU
    - User-programmable web pages for supporting servicing and commissioning of specific machine functions

### SIPLUS extreme RAIL Open Controller > SIPLUS ET 200SP CPU 1515SP PC2 RAIL

- **Trace functionality:**  
The trace function is supported by all CPUs of the S7-1500 automation system. It enables recording of analog and digital variables for each cycle and their representation as a curve with STEP 7. This is especially useful for motion control or closed-loop control applications
- **Integrated technology:**
  - Control of PROFIdrive-capable drives and drives with analog setpoint interfaces via standardized motion control instructions (PLCopen).
  - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection; can also be called via the web server of the CPU.
  - Comprehensive control functionalities, e.g. easy to configure blocks for automatic optimization of the control parameters for maximum control performance.
- **Integrated system diagnostics:**  
System diagnostics can be displayed via a connected monitor, an HMI device, the web server, or the operator panel of the software controller. Drive messages are also displayed in this way. System diagnostics are also available when the CPU is in STOP mode. If new hardware components are configured, the diagnostic information is updated automatically.
- **Integrated safety:**
  - **Know-how protection:**  
Algorithms and program blocks can be reliably password-protected against unauthorized access and modification.
  - **Access protection:**  
Extended access protection provides comprehensive protection against unauthorized configuration changes. Various authorization levels are available for assigning separate rights to different user groups.
  - **Integrity protection:**  
The system protects the data transferred to the CPU against unauthorized tampering. Modified or third-party transmission of engineering data are safely detected by the CPU.

#### Note

Some functions of the SIPLUS ET 200SP CPU 1515SP PC2 RAIL, such as Windows Hello, Cortana with voice output, support for 5-point touch, etc., may require extended hardware. This hardware can be connected as a USB device.

### Overview

SIPLUS ET 200SP CPU 1515SP PC2 F RAIL combines robustness and compact dimensions with the flexibility of centralized or distributed communication in the highest industrial functionality.

Furthermore, the CPU offers the entire value added of the ET 200SP system, the S7-1500 controller family and the TIA world together.

- Rugged, compact control system
- Combines the functions of an ET 200SP controller with those of a PC-based platform
- Turnkey all-in-one controller
- Can be used up to safety class SIL3 (Safety Integrity Level) according to IEC 61508 2nd Edition or PL e (Performance Level) according to ISO 13849
- High performance automation tasks with the use of new generation Intel Quad Core processors
- Connects high-level language applications and processes high data volumes with support from SIMATIC ODK 1500S

#### Note

SIPLUS extreme products are based on SIMATIC standard products. The contents listed here were taken from the corresponding standard products. SIPLUS extreme-specific information was added.

### Application

The CPU 1515SP PC2 F can be used to control special and series machines as well as plants in a centralized or distributed configuration. The standard and fail-safe user program is generated in the TIA Portal. The controller is especially suitable for machines with high data volumes, e.g. for quality assurance with camera inspection and image transmission, or printer connection.

The CPU 1515SP PC2 shows its strengths in particular

- When special automation functions have to be integrated using the C or C++ programming languages
- When a close connection of Windows software to the Software Controller is required
- When large volumes of data have to be stored.

The CPU 1515SP PC2 F + HMI with preinstalled WinCC Runtime Advanced is offered for additional HMI functionality. This enables control and visualization to be integrated on a single device.

### Design

The CPU 1515SP PC2 F is mounted on the standard DIN rail like all ET 200SP CPUs.

ET 200SP I/O modules can be used directly and centrally, and they communicate via the integrated backplane bus.

PN IO and S7 communication can be established and distributed I/Os can be connected via the PROFINET BusAdapters of the ET 200SP system (not included in scope of supply). This way, the system can be integrated into existing automation environments with little effort.

The PROFIBUS CM DP module extends the CPU 1515SP PC2 F to include PROFIBUS communication. The fail-safe versions support the PROFIsafe communication mechanisms.

The following interfaces are available:

- 1 x Gb Ethernet
- 1 x PN IO interface via ET 200SP BusAdapter with 2 ports
- 2 x USB 2.0 / 2x USB 3.0 at the front, for connecting a keyboard, mouse and USB flash drive, for example
- 1 x display port, for connecting a SIMATIC Flat Panel or multi-touch device, for example

The CPU also features the following:

- Mode switch
- Replaceable mass storage CFast with security seal
- Additional memory slot for SD/MMC
- Status LEDs
- Connection for 24 V DC supply voltage

Various turnkey and preconfigured variants are available with Windows 10 Enterprise on a 30 GB CFast card to suit different requirements:

- CPU 1515SP PC2 F
- CPU 1515SP PC2 F + HMI (incl. WinCC Runtime Advanced with 128/512/2 048 PowerTags)

### Function

- Configuring and programming with the STEP 7 engineering tool (and WinCC Advanced for the HMI option) in the TIA Portal:
  - Programmable according to IEC 61131-3
  - Supported programming languages: SCL (IL), LAD, FBD, STL, GRAPH7 (SFC)
- Innovative real-time system based on visualization technology:
  - The real-time system of the integrated S7-1500 software controllers enables parallel operation independent of the operating system:
    - Maximum real-time and deterministic properties
    - Supports restart of Windows while the controller is in operation
- High-speed program execution with several priority-controlled execution levels (cyclic, time-controlled, isochronous with PROFINET or PROFIBUS, event-driven via process and diagnostics alarms)
- Saving of retentive data:
  - The CPU 1515SP PC2 F ensures the security of the plant data, even when the power fails:
    - Saving of retentive data on the NVRAM of the CPU possible during voltage dips (default)
    - Retentive data storage possible on CPU CFast card (UPS required)

**SIPLUS RAIL**

SIPLUS Distributed Controller RAIL  
based on SIPLUS ET 200SP

**SIPLUS extreme RAIL Open Controller > SIPLUS ET 200SP CPU 1515SP PC2 F RAIL**

- **Communication:**
  - PROFINET IO communication via the ET 200SP BusAdapter; PROFIBUS communication via ET 200SP CM DP: PROFINET IO RT/IRT, isochronous mode, IO controller, I-Device, media redundancy, PROFlenergy, PROFIBUS DP master
  - SIMATIC and Open User communication with Windows applications or external devices via the Windows interfaces (GB Ethernet) of the CPU
- **Configuration control (option handling) for flexible variations of the central configuration**
  - Configure a controller and operate variants (options) that differ from this configuration
- **Integrated web server:**  
Scanning the CPU via the web server is supported by all CPUs of the S7-1500 automation system. The CPU Web server offers the following diagnostics options:
  - Image of the CPU with LEDs and the current operating state
  - Readout of the diagnostics buffer entries
  - Query of module status
  - Query of current messages
  - Information on the status of the topology/PROFINET devices
  - Transfer and management of user data on the load memory of the CPU
  - User-programmable Web pages for supporting servicing and commissioning of specific machine functions
- **Trace functionality:**  
The trace function is supported by all CPUs of the S7-1500 automation system. It enables recording of analog and digital variables for each cycle and their representation as a curve with STEP 7. This is especially useful for motion control or closed-loop control applications
- **Integrated technology:**
  - S7-1500 Motion Control PLCopen blocks for programming the motion functionality via PROFINET IO IRT interface. The functionality supports speed-controlled axes, positioning axes and external encoders.
  - Trace functions for all CPU tags, both for diagnostics in real time as well as for sporadic error detection; can also be called via the web server of the CPU
  - Integral closed-loop control functionality: Universal PID or 3-step controller with integrated optimization. Integrated temperature controller.
- **Integrated system diagnostics:**  
System diagnostics can be displayed via a connected monitor, an HMI device, the web server, or the operator panel of the software controller. Drive messages are also displayed in this way. System diagnostics are also available when the CPU is in STOP mode. If new hardware components are configured, the diagnostic information is updated automatically.
- **Integrated safety:**
  - **Know-how protection:**  
Algorithms and program blocks can be reliably password-protected against unauthorized access and modification.
  - **Access protection:**  
Extended access protection provides comprehensive protection against unauthorized configuration changes. Various authorization levels are available for assigning separate rights to different user groups.
  - **Integrity protection:**  
The system protects the data transferred to the CPU against unauthorized tampering. Modified or third-party transmission of engineering data are safely detected by the CPU.
  - **Fail-safe:**  
The use of a fail-safe SIMATIC S7-1500 Software Controller allows processing of standard and safety programs on the same controller. Generation of the fail-safe and standard user program is carried out in the TIA Portal with the same editors. Due to this integration the system benefits and the comprehensive functionality of SIMATIC are also available for fail-safe applications.

**Note**

Some functions of the CPU 1515SP PC2 F, such as Windows Hello, Cortana with voice output, support for 5-point touch, etc., may require extended hardware. This hardware can be connected as a USB device.

**Overview**

Thanks to their wide scope of functions, the interface modules of the scalable SIPLUS extreme RAIL ET 200SP I/O system, even in their basic versions, cover a wide range of applications. The basic functions of the interface modules include:

- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Short data update times of typically 1 ms
- Single Hot Swap (withdrawing and insertion of an I/O module during operation without impairing the communication with the remaining modules)
- Operation with gaps (empty BaseUnits)
- Complete diagnostic support, extending to channel-by-channel diagnostics
- Configuration control / option handling (adaptation of the actual configuration via user software)
- Device replacement without PG I&M data 0 to 3 (electronic rating plate with non-volatile storage of plant data)
- Firmware update
- Pluggable 24 V DC supply connection
- Network / power failure bridging time of 5 ms
- Labeling option via optional labeling strips and equipment labeling plates

When using PROFINET interface modules, the following basic functions are also included:

- Media redundancy (MRP) integrated 2-port switch
- Freely selectable connection method via SIMATIC BusAdapter
- Reset button for simple return to factory settings without the need for programming device
- Replacement without programming device even in case of non-topological configuration with subsequent automatic launching
- Automatic synchronization of the backplane bus to the PROFINET cycle to minimize the response time fluctuations (jitter)

**SIPLUS ET 200SP IM 155-6PN ST BA TX RAIL with PROFINET interface**

- Max. 32 I/O modules, also PROFIsafe modules, with complete diagnostic support
- Expansion option with max. 16 modules from the ET 200AL series using the BU-Send BaseUnit and the BA-Send BusAdapter
- Max. 256 bytes in each case for input and output data per module and max. 512 bytes per station (depending on configuration)
- Data update time: typ. 1 ms
- Selection of the type of connection of the PROFINET by means of SIMATIC BusAdapter (BusAdapter for copper cables only)

**SIPLUS ET 200SP IM 155-6PN ST TX RAIL with PROFINET interface**

- Max. 32 I/O modules, also PROFIsafe modules, with complete diagnostic support
- Expansion option with max. 16 modules from the ET 200AL series using the BU-Send BaseUnit and the BA-Send BusAdapter
- Max. 256 bytes in each case for input and output data per module and max. 512 bytes per station (depending on configuration)
- Data update time: typ. 1 ms
- Selection of the type of connection of the PROFINET by means of SIMATIC BusAdapter (BusAdapter for copper cables only)

**SIPLUS ET 200SP IM 155-6PN HF T1 RAIL and SIPLUS ET 200SP IM 155-6PN HF TX RAIL with PROFINET interface**

- Max. 64 I/O modules, also PROFIsafe modules, with complete diagnostic support
- Expansion option with max. 16 modules from the ET 200AL series using the BU-Send BaseUnit and the BA-Send BusAdapter
- Max. 288 bytes in each case for input and output data per module and max. 1440 bytes per station (depending on configuration)
- Fast data refresh time: from 250  $\mu$ s, also in isochronous mode
- S2 system redundancy
- Choice of connection type and physical connection of the PROFINET by means of SIMATIC BusAdapter. All BusAdapters with a connection for copper and/or fiber-optic cables can be used; BusAdapter must be ordered separately
- Package inclusive of server module

## SIPLUS ET 200SP RAIL

### SIPLUS extreme RAIL interface modules

#### Application

##### SIPLUS ET 200SP IM 155-6PN ST (BA) TX RAIL

The SIPLUS ET 200SP IM 155-6PN ST (BA) TX RAIL is designed mainly for standard PROFINET applications with average station expansion of up to 32 modules (max. 512 IO signals). All I/O modules, including PROFI-safe, can be used. In addition, the station can be expanded with as many as 16 IP67 modules of the SIMATIC ET 200AL series using BA-Send/BU-Send.

##### SIPLUS ET 200SP IM 155-6PN HF T1/TX RAIL

The SIPLUS ET 200SP IM 155-6PN HF T1 RAIL/ET 200SP IM 155-6PN HF TX RAIL are designed mainly for PROFINET applications with a high, flexible demand for functions, as well as large station expansion of up to 64 modules (max. 1024 IO signals). All I/O modules, including PROFI-safe, can be used. In addition, the station can be expanded with as many as 16 IP67 modules of the SIMATIC ET 200AL series using BA-Send/BU-Send.

Unlike the other interface modules, the SIPLUS ET 200SP IM 155-6PN HF T1 RAIL/ET 200SP IM 155-6PN HF TX RAIL support the following additional functions:

- Use of BusAdapters with fiber-optic cable connection
- Increased data volume of up to 1440 bytes for both input and output data and up to 288 bytes per module
- Multi Hot Swap (withdrawing and insertion of any number of I/O modules during operation without impairing the communication with the remaining modules)
- S2 redundancy
- Isochronous mode from 250 µs
- Oversampling
- MSI/MSO
- Shared device with up to four controllers
- Up to four subslots per module

#### Design

The SIPLUS ET 200SP IM 155-6PN RAIL interface module is snapped directly onto the DIN rail (7.5 x 35 mm or 15 x 35 mm).

- Optional labeling using light gray or yellow labeling strips. There is a choice of 2 materials:
  - Film strips on a roll with 500 strips, for thermal transfer roll printer
  - Card (180 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printer
- Optional equipment marking using slide-in equipment labeling plates
- Different connection types of the PROFINET by means of SIMATIC BusAdapter
  - Under ambient conditions in accordance with SIMATIC standard using BA 2xRJ45 for connection via RJ45 plug
  - In the case of mechanical loading during operation and/or an increased EMC requirements BA 2xFC for direct connection of the PROFINET cable

6

## Overview

- 4, 8 and 16-channel digital input (DI) modules
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic

For different requirements, the digital input modules offer:

- Function classes Standard and High Feature
- BaseUnits for single or multiple-conductor connection with automatic slot coding
- Individual system-integrated load group formation with self-assembling voltage distribution bars (a separate power module is no longer required for ET 200SP)
- Connection option of sensors compliant with IEC 61131 Type 1, 2 or 3 (module-dependent) for rated voltages of up to 24 V DC or 230 V AC
- Clear labeling on front of module
- LEDs for diagnostics, status, supply voltage and faults
- Electronically readable and non-volatile writable rating plate (I&M data 0 to 3)
- Optional accessories
  - Labeling strips (film or card)
  - Reference identification label
  - Color-coded label with module-specific CC Code
  - Shielding terminal

A quick and clear comparison of the functions of the different DI modules is offered by the TIA Selection Tool.

### Overview of digital input modules

Digital input	PU	Article No.	CC code	BU type
DI 16 x 24 V DC ST	1	6AG2131-6BH00-4BA0	CC00	A0
DI 8 x NAMUR HF	1	6AG2131-6TF00-4CA0	CC01	A0
DI 4 x 120 ... 230 V AC ST	1	6AG2131-6FD00-4BB1	CC41	B1

### Overview of BaseUnits

BaseUnit	PU	Article No.	CC codes for process terminals	CC codes for AUX terminals
<b>BU type A0</b> • New load group (light) • 16 process terminals • With 10 AUX terminals	1	6AG2193-6BP20-4DA0	CC01 to CC05	CC71 to CC73
<b>BU type A0</b> • New load group (light) • 16 process terminals • Without AUX terminals	1	6AG2193-6BP00-4DA0	CC01 to CC05	--
<b>BU type A0</b> • Forwarding of load group (dark) • 16 process terminals • With 10 AUX terminals	1	6AG2193-6BP20-4BA0	CC01 to CC05	CC71 to CC73
<b>BU type A0</b> • Forwarding of load group (dark) • 16 process terminals • Without AUX terminals	1	6AG2193-6BP00-4BA0	CC01 to CC05	--

## Application

The signals from digital sensors (switches, inductive and optical sensors etc.) can be recorded and transferred to the higher-level controller via the digital input modules.

## Design

### Usable BaseUnits (BU)

BaseUnits with an appropriate number of terminals are available for single or multi-conductor connection.

All variants that correspond to the BU type of the I/O module used can be used as BaseUnits (see Selection and ordering data).

### Load group formation

A light-colored BU separates the self-assembling, internal voltage buses (P1, P2, AUX) and thus opens a new load group. The power supply of a load group must be fed in at the light BU of this load group.

A dark BU forwards the power supply of the adjacent light BU on the left via the self-assembling voltage buses P1, P2 and AUX. A new infeed is therefore only required on the next light BU to the right. The setting of a further light BU is required whenever

- a new load group is to be formed (for example, for isolating the supply voltage from module groups) or
- the maximum current simultaneously required by the load group exceeds the permissible limit of 10 A.

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL digital inputs****Color identification of the terminals**

The potentials at the terminals of the BaseUnit are defined by the inserted I/O module in each case. To prevent wiring faults, the potentials of the terminals can optionally be identified by means of module-specific color-coded labels. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the additional ten internally jumpered AUX terminals, these can also be identified with color-coded labels. For the ten AUX terminals, color-coded labels are available in red, blue, and yellow/green.

**Labeling**Labeling strips

Labeling strips can be inserted on the front of the interface modules or I/O modules and individually labeled via STEP 7, macros, etc. No special additional holder is required. If required, they can be easily replaced with the component.

Equipment labeling plates

Equipment labeling plates enable the equipment to be easily identified (e.g. compliant with EN 81346). They are easily plugged onto the required component (interface modules, I/O modules and BaseUnits) and when required, they can be easily replaced with the component.

The following labeling components are available:

- Film labeling strips, light-gray, roll with 500 strips, perforated, for thermal transfer printers
- Film labeling strips, yellow, roll with 500 strips, perforated, for thermal transfer printers
- Card labeling strips (180 g/m<sup>2</sup>), light gray, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Card labeling strips (180 g/m<sup>2</sup>), yellow, DIN A4 sheets with 100 strips each, for laser printer
- Equipment labeling plates, white, ten sheets each with 16 labels, for thermal transfer card printers or labels

**System-integrated shield connection**

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

**Overview**

- 4, 8 and 16-channel digital output (DQ) modules
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic

For different requirements, the digital output modules offer:

Overview of digital output modules

Digital output	PU	Article No.	CC code	BU type
DQ 16 x 24 V DC/0.5 A ST	1	6AG2132-6BH01-4BA0	CC00	A0

<b>BU type B1</b> • Forwarding of load group (dark) • 12 process terminals • 2 x 2 (1L, 2L, 1N, 2N) direct infeed module • Without AUX terminals	1	6AG2193-6BP20-0BB1	CC41	--
<b>BU type U0</b> • Forwarding of load group (dark) • 16 process terminals • Without AUX terminals	1	6AG2193-6BP00-4BU0	CC20	--
<b>BU type U0</b> • New load group (light) • 16 process terminals • Without AUX terminals	1	6AG2193-6BP00-4DU0	CC20	--

- Function classes Basic and High Feature
- BaseUnits for single or multiple-conductor connection with automatic slot coding
- Individual system-integrated load group formation with self-assembling voltage distribution bars (a separate power module is no longer required for ET 200SP)
- Option of connecting actuators with rated load voltages of up to 120 V DC or 230 V AC and load currents of up to 5 A (depending on module)
- Clear labeling on front of module
- LEDs for diagnostics, status, supply voltage and faults
- Electronically readable and non-volatile writable rating plate (I&M data 0 to 3)
- Optional accessories
  - Labeling strips (film or card)
  - Equipment labeling plate
  - Color-coded label with module-specific CC code
  - Shielding terminal

A quick and clear comparison of the functions of the different DQ modules is offered by the TIA Selection Tool.

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL digital outputs****Application**

Digital actuators (magnetic valves, contactors and signal lamps, etc.) can be controlled by means of the digital output modules.

**Design****Usable BaseUnits (BU)**

BaseUnits with an appropriate number of terminals are available for single or multi-conductor connection.

All variants that correspond to the BU type of the I/O module used can be used as BaseUnits (see Selection and ordering data).

**Load group formation**

A light-colored BU separates the self-assembling, internal voltage buses (P1, P2, AUX) and thus opens a new load group. The supply voltage of a load group must be fed in at the light BU of this load group.

A dark BU forwards the supply voltage of the adjacent light BU on the left via the self-assembling voltage buses P1, P2 and AUX. A new infeed is therefore only required on the next light BU to the right. The setting of a further light BU is required whenever

- a new load group is to be formed (for example, for isolating the supply voltage from module groups) or
- the maximum current simultaneously required by the load group exceeds the permissible limit of 10 A.

**Color identification of the terminals**

The potentials at the terminals of the BaseUnit are defined by the inserted I/O module in each case. To prevent wiring faults, the potentials of the terminals can optionally be identified by means of module-specific color-coded labels. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the additional ten internally jumpered AUX terminals, these can also be identified with color-coded labels. For the ten AUX terminals, color-coded labels are available in red, blue, and yellow/green.

**Labeling**Labeling strips

Labeling strips can be inserted on the front of the interface modules or I/O modules and individually labeled via STEP 7, macros, etc. No special additional holder is required. If required, they can be easily replaced with the component.

Equipment labeling plates

Equipment labeling plates enable the equipment to be easily identified (e.g. compliant with EN 81346). They are easily plugged onto the required component (interface modules, I/O modules and BaseUnits) and when required, they can be easily replaced with the component.

The following labeling components are available:

- Film labeling strips, light-gray, roll with 500 strips, perforated, for thermal transfer printers
- Film labeling strips, yellow, roll with 500 strips, perforated, for thermal transfer printers
- Card labeling strips (180 g/m<sup>2</sup>), light gray, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Card labeling strips (180 g/m<sup>2</sup>), yellow, DIN A4 sheets with 100 strips each, perforated, for laser printer

Equipment labeling plates, white, ten sheets each with 16 labels, for thermal transfer card printers or labels

**System-integrated shielded connection**

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

**Overview**

- 2, 4 and 8-channel analog input (AI) modules
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic

For different requirements, the analog input modules offer:

- Function classes Basic and High Feature
- BaseUnits for single or multiple-conductor connection with automatic slot coding
- Individual system-integrated load group formation with self-assembling voltage distribution bars (a separate power module is no longer required for ET 200SP)
- Option of connecting current, voltage and resistance sensors, as well as thermocouples
- Energy Meter for recording up to 200 electrical variables
- Clear labeling on front of module
- LEDs for diagnostics, status, supply voltage and faults
- Electronically readable and non-volatile writable rating plate (I&M data 0 to 3)
- Extended functions and additional operating modes in some cases
  - Scalable measuring range (adaptation of measuring range, increase of the 16-bit resolution by adapting the measuring range to a limited section)
- Optional accessories
  - Labeling strips (film or card)
  - Equipment labeling plate
  - Color-coded label with module-specific CC code
  - Shielding terminal

A quick and clear comparison of the functions of the AI modules is offered by the TIA Selection Tool.

6

**Application**

The measured values of analog sensors (current, voltage, resistance, temperature etc.) can be recorded and transferred to the higher-level controller via the analog input modules.

**Design****Usable BaseUnits (BU)**

BaseUnits with an appropriate number of terminals are available for single or multi-conductor connection.

All variants that correspond to the BU type of the I/O module used can be used as BaseUnits (see Selection and ordering data).

**Load group formation**

A light-colored BU separates the self-assembling, internal voltage buses (P1, P2, AUX) and thus opens a new load group. The supply voltage of a load group must be fed in at the light BU of this load group.

A dark BU forwards the supply voltage of the adjacent light BU on the left via the self-assembling voltage buses P1, P2 and AUX. A new infeed is therefore only required on the next light BU to the right. The setting of a further light BU is required whenever

- a new load group is to be formed (for example, for isolating the supply voltage from module groups) or
- the maximum current simultaneously required by the load group exceeds the permissible limit of 10 A.

**Color identification of the terminals**

The potentials at the terminals of the BaseUnit are defined by the inserted I/O module in each case. To prevent wiring faults, the potentials of the terminals can optionally be identified by means of module-specific color-coded labels. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the additional ten internally jumpered AUX terminals or 2x5 additional terminals, these can also be identified with color-coded labels. For the ten AUX terminals, color-coded labels are available in red, blue, and yellow/green.

**Labeling**Labeling strips

Labeling strips can be inserted on the front of the interface modules or I/O modules and individually labeled by means of STEP7, macros, etc. No special additional holder is required. If required, they can be easily replaced with the component.

Equipment labeling plates

Equipment labeling plates enable the equipment to be easily identified (e.g. compliant with EN 81346). They are easily plugged onto the required component (interface modules, I/O modules and BaseUnits) and when required, they can be easily replaced with the component.

The following labeling components are available:

Film labeling strips, light-gray, roll with 500 strips, perforated, for thermal transfer printers

- Film labeling strips, yellow, roll with 500 strips, perforated, for thermal transfer printers
- Card labeling strips (180 g/m<sup>2</sup>), light gray, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Card labeling strips (180 g/m<sup>2</sup>), yellow, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Equipment labeling plates, white, ten sheets each with 16 labels, for thermal transfer card printers or labels

**System-integrated shielded connection**

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

<b>General information</b>				
<b>Product type designation</b>	AI 8xI 2-/4-wire BA	AI 2xU/I 2-4-wire HF	AI 8xRTD/TC 2-wire HF	AI 4xRTD/TC 2-/3-/4-wire HF
<b>Product function</b>				
• Isochronous mode	No	Yes	No	No
• Measuring range scalable	No	No		Yes
• Adjustment of measuring range				
<b>Operating mode</b>				
• Oversampling	No	No	No	No
• MSI	No	Yes	No	No
<b>Supply voltage</b>				
<b>Rated value (DC)</b>	24 V	24 V	24 V	24 V
<b>Reverse polarity protection</b>	Yes	Yes	Yes	Yes
<b>Analog inputs</b>				
<b>Number of analog inputs</b>	8; Single-ended	2; Differential inputs	8	4
• For current measurement	8			
<b>permissible input voltage for volt- age input (destruction limit), max.</b>		30 V	30 V	30 V
<b>permissible input current for cur- rent input (destruction limit), max.</b>	50 mA	50 mA		
<b>Constant measurement current for resistance-type transmitter, typ.</b>			2 mA	0.7 mA; 1.7 mA for Cu10 sensors
<b>Cycle time (all channels), min.</b>	1 ms; per channel		Sum of the basic conversion times and additional pro- cessing times (depending on the parameterization of the active channels)	Sum of the basic conversion times and additional pro- cessing times (depending on the parameterization of the active channels); for line compensation in case of a three-wire connection, an additional cycle is necessary
<b>Technical unit for temperature measurement adjustable</b>			Yes; °C/°F/K	Yes; °C/°F/K
<b>Analog input with oversampling</b>		No		
<b>Standardization of measured values</b>		Yes		
<b>Input ranges (rated values), voltages</b>				
• 0 to +10 V		Yes; 15 bit		
• 1 V to 5 V		Yes; 15 bit		
• -1 V to +1 V			Yes; 16 bit incl. sign	Yes; 16 bit incl. sign
• -10 V to +10 V		Yes; 16 bit incl. sign	Yes; 16 bit incl. sign	Yes; 16 bit incl. sign
• -250 mV to +250 mV		Yes; 16 bit incl. sign	Yes; 16 bit incl. sign	Yes; 16 bit incl. sign
• -5 V to +5 V			Yes; 16 bit incl. sign	Yes; 16 bit incl. sign
• -50 mV to +50 mV			Yes; 16 bit incl. sign	Yes; 16 bit incl. sign
• -80 mV to +80 mV			Yes; 16 bit incl. sign	Yes; 16 bit incl. sign
<b>Input ranges (rated values), currents</b>				
• 0 to 20 mA	Yes	Yes; 15 bit		
• -20 mA to +20 mA	Yes	Yes; 16 bit incl. sign		
• 4 mA to 20 mA	Yes	Yes; 15 bit

## Overview

- 2 and 4-channel analog output (AQ) modules
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic

For different requirements, the analog output modules offer:

- Function classes Standard and High Speed
- BaseUnits for single or multiple-conductor connection with automatic slot coding
- Potential distributor modules for system-integrated expansion with potential terminals
- Individual system-integrated load group formation with self-assembling voltage distribution bars (a separate power module is no longer required for ET 200SP)

### Overview of analog output modules

Analog output	PU	Article No.	CC code	BU type
AQ 4 x U/I ST	1	6AG2135-6HD00-4BA1	CC00	A0, A1
AQ 2xU/I HS With two operating modes: • High-speed isochronous AQ • Oversampling	1	6AG2135-6HB00-1DA1	CC00	A0, A1

### Overview of BaseUnits

BaseUnit	PU	Article No.	CC codes for process terminals	CC codes for AUX terminals
<b>BU type A0</b> • New load group (light) • 16 process terminals • With 10 AUX terminals	1	6AG2193-6BP20-4DA0	CC01 to CC05	CC71 to CC73
<b>BU type A0</b> • New load group (light) • 16 process terminals • Without AUX terminals	1	6AG2193-6BP00-4DA0	CC01 to CC05	--
<b>BU type A0</b> • Forwarding of load group (dark) • 16 process terminals • With 10 AUX terminals	1	6AG2193-6BP20-4BA0	CC01 to CC05	CC71 to CC73
<b>BU type A0</b> • Forwarding of load group (dark) • 16 process terminals • Without AUX terminals	1	6AG2193-6BP00-4BA0	CC01 to CC05	--

## Application

The analog output modules enable analog actuators (proportional valves, drives, etc.) to be controlled.

- Option for connecting current and voltage actuators
- Clear labeling on front of module
- LEDs for diagnostics, status, supply voltage and faults
- Electronically readable and non-volatile writable rating plate (I&M data 0 to 3)
- Extended functions and additional operating modes in some cases
  - Oversampling operating mode (n-fold equidistant output of an analog value within one PN cycle and thus the precisely timed output of an analog value or a sequence of analog values)
  - Isochronous mode (simultaneous equidistant output of analog values)
  - Output of substitute value in the event of interruptions to communication (shutdown, output adjustable substitute value, or keep last value)
  - Calibration during runtime
  - Re-parameterization during operation
  - Firmware update
  - Diagnostics of wire break, short circuit, overflow, underflow
  - Value status (optional binary validity information of the analog value status in the process image)
  - Supports the PROFenergy profile
- Optional accessories
  - Labeling strips (film or card)
  - Equipment labeling plate
  - Color-coded label with module-specific CC code
  - Shielding terminal

A quick and clear comparison of the functions of the AQ modules is offered by the TIA Selection Tool.

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL analog outputs****Design****Usable BaseUnits (BU)**

BaseUnits with an appropriate number of terminals are available for single or multi-conductor connection.

All variants that correspond to the BU type of the I/O module used can be used as BaseUnits (see Selection and ordering data).

**Load group formation**

A light-colored BU separates the self-assembling, internal voltage buses (P1, P2, AUX) and thus opens a new load group. The supply voltage of a load group must be fed in at the light BU of this load group.

A dark BU forwards the supply voltage of the adjacent light BU on the left via the self-assembling voltage buses P1, P2 and AUX. A new infeed is therefore only required on the next light BU to the right. The setting of a further light BU is required whenever

- a new load group is to be formed (for example, for isolating the supply voltage from module groups) or
- the maximum current simultaneously required by the load group exceeds the permissible limit of 10 A.

**Color identification of the terminals**

The potentials at the terminals of the BaseUnit are defined by the inserted I/O module in each case. To prevent wiring faults, the potentials of the terminals can optionally be identified by means of module-specific color-coded labels. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the additional ten internally jumpered AUX terminals, these can also be identified with color-coded labels. For the ten AUX terminals, color-coded labels are available in red, blue, and yellow/green.

**Labeling**Labeling strips

Labeling strips can be inserted on the front of the interface modules or I/O modules and individually labeled via STEP 7, macros, etc. No special additional holder is required. If required, they can be easily replaced with the component.

Equipment labeling plates

Equipment labeling plates enable the equipment to be easily identified (e.g. compliant with EN 81346). They are easily plugged onto the required component (interface modules, I/O modules and BaseUnits) and when required, they can be easily replaced with the component.

The following labeling components are available:

- Film labeling strips, light-gray, roll with 500 strips, perforated, for thermal transfer printers
- Film labeling strips, yellow, roll with 500 strips, perforated, for thermal transfer printers
- Card labeling strips (180 g/m<sup>2</sup>), light gray, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Card labeling strips (180 g/m<sup>2</sup>), yellow, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Equipment labeling plates, white, ten sheets each with 16 labels, for thermal transfer card printers or labels

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL technology modules > SIPLUS extreme RAIL TM Count 1X24 V T1 RAIL counter module****Overview****Technical properties**

- Counter module for ET 200SP
- Interfaces:
  - 24 V encoder signals A, B and N from P, M or push-pull-switching encoders and sensors
  - 24 V encoder supply output, short-circuit proof
  - 3 digital inputs for controlling the count operation, for saving or for setting the count value
  - 2 digital outputs for fast reactions regardless of the counter status or measured value
- Counting frequency 200 kHz (800 kHz with quadruple evaluation)
- Counting range: +/- 31 bits
- Measurement function
- Parameterizable hardware interrupts
- Parameterizable input filters for suppressing interferences at sensor and digital inputs

**Supported types of encoders/signals**

- 24 V incremental encoder with and without signal N
- 24 V pulse encoder with direction signal
- 24 V pulse encoder without direction signal
- 24 V pulse encoder for pulse up and down respectively

**Supported system functions**

- Isochronous mode
- Firmware update
- Identification data I&M

**Application**

In particular, the TM Count 1x24V counter module detects high-speed signals with high frequencies and returns the counter reading and the current speed to the control. The counter control ensures a precise counter result and rapid response in the system via integrated digital input and output signals. Comprehensive parameterization options provide optimum adaptation to the task at hand and reduce control load.

In particular, the TM Count 1x24V counter module is suitable for position detection for HTL incremental encoders for use with Motion Control technology objects of the SIMATIC S7-1500 Advanced Controller.

**Design****Suitable BaseUnits**

The standard BaseUnits Type A0 of ET 200SP are available for connection. The individual signals of the counter module are connected to the appropriate terminals.

A light BaseUnit opens a new load group. The supply voltage must be fed in via this BaseUnit. The first BaseUnit next to the interface module must always be a light BaseUnit.

A dark BaseUnit forwards the supply voltage of the adjacent light BaseUnit on the left via self-assembling voltage buses. A new infeed is therefore only required on the next light BaseUnit to the right.

All variants that correspond to BaseUnit type A0 can be used as BaseUnits.

**System-integrated shield connection**

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to functional ground (DIN rail) is carried out by the user and requires no additional wiring.

**Technical specifications**

Article number	<b>6AG2138-6AA01-1BA0</b> SIPLUS ET 200SP TM COUNT 1X24V T1 RAIL
<b>General information</b>	
<b>Product type designation</b>	TM Count 1x24V
<b>Product function</b>	
• I&M data	Yes; I&M0 to I&M3
• Isochronous mode	Yes
<b>Supply voltage</b>	
<b>Load voltage L+</b>	
• Rated value (DC)	24 V
• Reverse polarity protection	Yes
<b>Encoder supply</b>	
<b>Number of outputs</b>	1
<b>24 V encoder supply</b>	
• 24 V	Yes; L+ (-0.8 V)
• Short-circuit protection	Yes; electronic/thermal
• Output current, max.	300 mA

**SIPLUS extreme RAIL technology modules > SIPLUS extreme RAIL TM Count 1X24 V T1 RAIL counter module**

Article number	<b>6AG2138-6AA01-1BA0</b> SIPLUS ET 200SP TM COUNT 1X24V T1 RAIL
<b>Digital inputs</b>	
Number of digital inputs	3
Digital inputs, parameterizable	Yes
Input characteristic curve in accordance with IEC 61131, type 3	Yes
Digital input functions, parameterizable	
• Gate start/stop	Yes
• Capture	Yes
• Synchronization	Yes
• Freely usable digital input	Yes
Input voltage	
• Rated value (DC)	24 V
• for signal "0"	-5 ... +5 V
• for signal "1"	+11 to +30V
• permissible voltage at input, min.	-30 V; -5 V continuous, -30 V brief reverse polarity protection
• permissible voltage at input, max.	30 V
Input current	
• for signal "1", typ.	2.5 mA
Input delay (for rated value of input voltage)	
• for standard inputs	
- parameterizable	Yes; none / 0.05 / 0.1 / 0.4 / 0.8 / 1.6 / 3.2 / 12.8 / 20 ms
- at "0" to "1", min.	6 μs; for parameterization "none"
- at "1" to "0", min.	6 μs; for parameterization "none"
• for technological functions	
- parameterizable	Yes
<b>Digital outputs</b>	
Type of digital output	Transistor
Number of digital outputs	2
Digital outputs, parameterizable	Yes
Short-circuit protection	Yes; electronic/thermal
Limitation of inductive shutdown voltage to	L+ (-53 V)
Controlling a digital input	Yes
Digital output functions, parameterizable	
• Switching tripped by comparison values	Yes
• Freely usable digital output	Yes
Switching capacity of the outputs	
• with resistive load, max.	0.5 A; Per digital output
• on lamp load, max.	5 W
Load resistance range	
• lower limit	48 Ω
• upper limit	12 kΩ
Output voltage	
• for signal "1", min.	23.2 V; L+ (-0.8 V)
Output current	
• for signal "1" rated value	0.5 A; Per digital output
• for signal "0" residual current, max.	0.5 mA
Output delay with resistive load	
• "0" to "1", max.	50 μs
• "1" to "0", max.	50 μs
Switching frequency	
• with resistive load, max.	10 kHz
• with inductive load, max.	0.5 Hz; Acc. to IEC 60947-5-1, DC-13; observe derating curve
• on lamp load, max.	10 Hz
Total current of the outputs	
• Current per module, max.	1 A
<b>Encoder</b>	
Connectable encoders	
• 2-wire sensor	Yes
- permissible quiescent current (2-wire sensor), max.	1.5 mA
Encoder signals, incremental encoder (asymmetrical)	
• Input voltage	24 V
• Input frequency, max.	200 kHz
• Counting frequency, max.	800 kHz; with quadruple evaluation
• Cable length, shielded, max.	600 m; depending on input frequency, encoder and cable quality; max. 50 m at 200 kHz
• Signal filter, parameterizable	Yes
• Incremental encoder with A/B tracks, 90° phase offset	Yes
• Incremental encoder with A/B tracks, 90° phase offset and zero track	Yes
• pulse encoder	Yes
• pulse encoder with direction	Yes
• pulse encoder with one impulse signal per count direction	Yes
Interface types	
• Source/sink input	Yes
• Input characteristic curve in accordance with IEC 61131, type 3	Yes

<b>Interrupts/diagnostics/status information</b>	
<b>Substitute values connectable</b>	Yes; Parameterizable
<b>Alarms</b>	
• Diagnostic alarm	Yes
• Hardware interrupt	Yes
<b>Diagnoses</b>	
• Monitoring the supply voltage	Yes
• Wire-break	Yes
• Short-circuit	Yes
• A/B transition error at incremental encoder	Yes
• Group error	Yes
<b>Diagnostics indication LED</b>	
• Monitoring of the supply voltage (PWR-LED)	Yes; green PWR LED
• Channel status display	Yes; green LED
• for module diagnostics	Yes; green/red DIAG LED
• Status indicator forward counting (green)	Yes
• Status indicator backward counting (green)	Yes
<b>Integrated Functions</b>	
<b>Counter</b>	Yes
• Number of counters	1
• Counting frequency, max.	800 kHz; with quadruple evaluation
<b>Fast mode</b>	Yes
<b>Counting functions</b>	
• Can be used with TO High_Speed_Counter	Yes
• Continuous counting	Yes
• Counter response parameterizable	Yes
• Hardware gate via digital input	Yes
• Software gate	Yes
• Event-controlled stop	Yes
• Synchronization via digital input	Yes
• Counting range, parameterizable	Yes
<b>Comparator</b>	
• Number of comparators	2
• Direction dependency	Yes
• Can be changed from user program	Yes
<b>Position detection</b>	
• Incremental acquisition	Yes
• Suitable for S7-1500 Motion Control	Yes
<b>Measuring functions</b>	
• Measuring time, parameterizable	Yes
• Dynamic measurement period adjustment	Yes
• Number of thresholds, parameterizable	2
<b>Measuring range</b>	
• Frequency measurement, min.	0.04 Hz
• Frequency measurement, max.	800 kHz
• Cycle duration measurement, min.	1.25 µs
• Cycle duration measurement, max.	25 s
<b>Accuracy</b>	
• Frequency measurement	100 ppm; depending on measuring interval and signal evaluation
• Cycle duration measurement	100 ppm; depending on measuring interval and signal evaluation
• Velocity measurement	100 ppm; depending on measuring interval and signal evaluation
<b>Potential separation</b>	
<b>Potential separation channels</b>	
• between the channels and backplane bus	Yes
<b>Standards, approvals, certificates</b>	
<b>Suitable for safety functions</b>	No
<b>Railway application</b>

## Overview

- 2-channel pulse output module for SIPLUS ET 200SP
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Operating modes:
  - Single pulse with defined length
  - Pulse chain with defined number of pulses
  - Pulse width modulation (with flexible ON period, optional current control and dither function)
  - PWM signal for controlling a DC motor
  - On and OFF delay; rising and falling edge can be delayed separately to the microsecond
  - Frequency output with defined output frequency
- Hardware:
  - 2 24V channels, 2A output current can be switched in parallel to boost performance to 4A of output current
  - Switching frequencies to 10 kHz; at reduced output current to 0.1 A up to 100 kHz
  - Push/pull output driver for especially steep edges at the outputs
  - Polarity change in DC motor operation for direction reversal
  - 1 high-speed 24 V digital input per channel with parameterizable input delay from 4  $\mu$ s
- Channel functions:
  - HW enable; Start of signal output with the onboard digital input
  - Parameterizable ON delay; for precise deceleration between the HW enable and the start of output
  - Current measurement in the operating modes pulse-width modulation and pulse chain; enables control of the output current mean value over a period. Temperature influences can thus be balanced to the resistance of the actuator.
  - Cyclic control of the respective main setpoint from the PLC in every operating mode; other values can be modified flexibly from the user program.
- Supported system functions:
  - Isochronous mode; enables precision-timed connection of the setpoint output to a higher-level controller
  - Firmware update
  - Identification data I&M

## Application

A host of tasks can be solved with the pulse output module TM Pulse 2x24V.

- In the operating mode input/output delay, precisely adjustable, reproducible and extremely short response times can be implemented between an input and an output. Enabling of the response can be controlled flexibly from the CPU using the software enable bit.
- The operating mode pulse output allows precise proportioning by means of a pulse that can be specified to the microsecond.
- The operating mode pulse width modulation is suitable for controlling proportional valves without further amplification electronics. The integrated dither function overlays the setpoint, if required, with an oscillation that keeps the valve in motion and thus allows precise control of the valve position. The optional current control compensates for temperatures that would change the current in the valve.
- When operating with simple DC motors, setpoints of -100% to +100% can be specified, allowing the motor to be controlled with variable voltage in both directions.
- The pulse chain allows precise filling of number-dependent packaging
- If a higher current is required, both of the module's channels can be combined to allow a current of up to 4A.

## Design

- 2 24 V channels each with up to 2 A of output current; Parallel switching of both channels to boost power up to 4 A of output current
- 1 high-speed 24 V digital input per channel with parameterizable input delay from 4  $\mu$ s

## Suitable BaseUnits

The ET 200SP type B1 BaseUnit is available for connection. The individual signals of the pulse output module are connected to the appropriate terminals.

The type B1 BaseUnit is a dark BaseUnit and forwards the supply voltage of the BaseUnit on the left to its neighbor on the right via self-assembling voltage busbars. The TM Pulse is supplied direct via the infeed terminals of the BaseUnit and is not connected to the neighboring modules.

## Shield connection

Due to the high-speed input and output signals, a shielded cable and a low-impedance connection to function ground (DIN rail) are recommended. The type B1 BaseUnit does NOT offer an integrated connection to the DIN rail. Users must ensure correct shielding themselves. Please observe the information in the manual.

## Accessories (not included in the scope of supply of the module)

- Labeling strips
- Equipment labeling plates

## Function

Operating modes

- Single pulse with defined length
- Pulse chain with defined number of pulses
- Pulse width modulation with flexible ON period, optional current control and dither function (the dither function overlays the setpoint, if required, with an oscillation that keeps the valve in motion and thus allows precise control of the valve position).
- Control of a DC motor with a PWM signal and direction reversal
- ON and OFF delay; forwards the input signal to the output. The rising and falling edge can be delayed separately to the microsecond.
- Frequency output with defined output frequency

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL technology modules > SIPLUS extreme RAIL TM Pulse 2x24V T1 RAIL pulse output module**

## Hardware functions

- Switching frequencies to 10 kHz; at reduced output current to 0.1 A up to 100 kHz
- Push/pull output driver for especially steep edges at the outputs
- Polarity change in DC motor operation for direction reversal

Channel functions for flexible adaptation to the requirements of a machine and the respective sequence

- HW enable; Start of signal output with the onboard digital input
- Parameterizable ON delay; allows precise delay between the HW enable and the start of output  
Current measurement in the operating modes pulse-width modulation and pulse chain; enables control of the output current to the mean value over a period. Temperature influences can thus be balanced to the resistance of the actuator.
- The respective main setpoint in each operating mode is controlled cyclically by the PLC, and other values can be modified flexibly from the user program.

## Supported system functions

- Isochronous mode enables precision-timed connection of the setpoint output to a higher-level controller
- Firmware update
- Identification data I&M

**Technical specifications**

Article number	<b>6AG2138-6DB00-1BB1</b> SIPLUS ET 200SP TM PULSE 2x24V T1 RAIL
<b>General information</b>	
<b>Product type designation</b>	TM Pulse 2x24 V
<b>Product function</b>	
• I&M data	Yes; I&M 0
• Isochronous mode	Yes
<b>Supply voltage</b>	
<b>Load voltage L+</b>	
• Rated value (DC)	24 V
• Short-circuit protection	Yes
• Reverse polarity protection	Yes; against destruction
<b>Encoder supply</b>	
<b>Number of outputs</b>	2; A common 24V encoder supply for both channels
<b>24 V encoder supply</b>	
• 24 V	Yes; L+ (-0.8 V)
• Short-circuit protection	Yes; per module, electronic
• Output current, max.	300 mA
<b>Digital inputs</b>	
<b>Number of digital inputs</b>	2; 1 per channel
<b>Digital inputs, parameterizable</b>	Yes
<b>Input characteristic curve in accordance with IEC 61131, type 3</b>	Yes
<b>Digital input functions, parameterizable</b>	
• Freely usable digital input	Yes
• HW enable for digital output	Yes
<b>Input voltage</b>	
• Type of input voltage	DC
• Rated value (DC)	24 V
• for signal "0"	-30 to +5 V
• for signal "1"	+11 to +30V
• permissible voltage at input, min.	-30 V
• permissible voltage at input, max.	30 V
<b>Input current</b>	
• for signal "1", typ.	2.5 mA
<b>Input delay (for rated value of input voltage)</b>	
• for standard inputs	
- parameterizable	Yes; none / 0.05 / 0.1 / 0.4 / 0.8 / 1.6 / 3.2 / 12.8 / 20 ms
- at "0" to "1", min.	4 µs; for parameterization "none"
- at "1" to "0", min.	4 µs; for parameterization "none"
<b>Digital outputs</b>	
<b>Type of digital output</b>	P- and M-switching
<b>Number of digital outputs</b>	2; 1 per channel
<b>Digital outputs, parameterizable</b>	Yes
<b>Short-circuit protection</b>	Yes; electronic/thermal
<b>Limitation of inductive shutdown voltage to</b>	-0.8 V
<b>Controlling a digital input</b>	Yes

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL communication > SIPLUS extreme RAIL CM PtP serial interface****Overview**

- CM PtP communications module; module for serial communication connections with RS232 and RS422 interfaces. RS485 for the Freeport, 3964(R), Modbus RTU, and USS protocols, max. 115.2 kbit/s, 2 KB frame length, 4 KB receive buffer.
- Protocols supported
  - Freeport: User-parameterizable frame format for universal communication
  - 3964(R) for improved transmission reliability
  - Modbus RTU master (requires instructions in SIMATIC S7)
  - Modbus RTU slave (requires instructions in SIMATIC S7)
  - USS, implemented through instructions
- Interface properties
  - RS232 with auxiliary signals
  - RS422 for full-duplex connections
  - RS485 for half-duplex and multi-point connections
  - Transfer rates from 300 to 115 200 bps for RS232 and RS422
  - Transfer rates from 300 to 25 000 bps for RS485
  - Frame lengths
    - In universal mode: 2 KB each in send and receive direction
    - In performance-optimized operation: 30 bytes in send direction, 24 bytes in receive direction
- Can be plugged into type A0 BaseUnits (BU) with automatic coding
- LED display for errors, operation, and supply voltage
- Communication display for sending and receiving
- Clear labeling on front of module
  - Plain text identification of the module type and function class
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Color coding of the module type
  - Hardware and firmware version
  - Complete Article No.
- Optional labeling accessories
  - Labeling strips
  - Equipment labeling plate
- Optional system-integrated shield connection

**Application**

- Communications modules connect the PLC with an external communication partner to exchange data.
- Comprehensive parameterization options make it possible to adapt the PLC flexibly to the communication partner.
- Modbus RTU master creates a Modbus RTU network for up to 30 Modbus slaves.
- Lights and devices are controlled from the stage area with DMX512.
- Performance-optimized operation is particularly suitable for sending and receiving large numbers of short frames with multiple CM PtP in a station. Frames of max. 24 bytes in send direction and 30 bytes in receive direction are possible.

**Design****Suitable BaseUnits**

The standard BaseUnits of ET 200SP are available for connection. The individual signals of the serial connection are connected with appropriate terminals.

A light BaseUnit opens a new load group. The supply voltage must be fed in via this BaseUnit.

A dark BaseUnit forwards the supply voltage of the adjacent light BaseUnit on the left via self-assembling voltage buses. A new infeed is therefore only required on the next light BaseUnit to the right.

All variants that correspond to BaseUnit type A0 can be used as BaseUnits.

**System-integrated shield connection**

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to functional ground (DIN rail) is carried out by the user and requires no additional wiring.

## Technical specifications

Article number	<b>6AG2137-6AA01-4BA0</b> SIPLUS ET 200SP CM PTP RAIL

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL communication > SIPLUS extreme RAIL CM 4x IO-Link****Overview**

- SIPLUS ET 200SP CM 4xIO-LINK ST T1 RAIL communication module:  
Serial communication module for connecting up to 4 IO-Link devices in accordance with IO-Link specification V1.0 and V1.1. The IO-Link parameters are configured using the Port Configuration Tool (PCT), version V3.0 and higher.
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- Time-based IO  
Time-based IO ensures that signals are output with a precisely defined response time. By combining inputs and outputs, for example, passing products can be accurately measured or fluids dosed in precise quantities.
- Supported data transfer rates
  - COM1 (4.8 kbps)
  - COM2 (38.4 kbps)
  - COM3 (230.4 kbps)

- Expansion limits
  - Length of cable: Max. 20 m
  - Max. 32 bytes of input and output data per port
  - Max. 144 bytes of input data and 128 bytes of output data per module
- Supported ET 200SP system functions
  - Replacement without PG with automatic backup without the engineering tool of the IO Link Device Parameter (V1.1 devices only) and the IO-Link master parameters by means of redundant saving of parameters on the e-coding element
  - Re-parameterization during operation
  - Identification data I&M
  - Firmware update
  - PROFlenergy
- Can be plugged into Type A0 BaseUnits (BU) with automatic e-coding
- LED indicators
  - DIAG: Operating state indicator (green/red) of the module
  - C1..C4: Port status indicator (green) for Port 1, 2, 3 and 4
  - Q1..Q4: Channel status indicator (green) for Port 1, 2, 3 and 4
  - F1..F4: Port fault indicator (red) for Port 1, 2, 3 and 4
  - PWR: Supply voltage indicator (green)
- Clear labeling on front of module
  - Plain text identification of the module type and function class
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Color-coding of the module class CM: Silver
  - Hardware and firmware version
  - Complete Article No.
- Optional accessories
  - Labeling strips
  - Reference identification label
  - Color-coding plate with color code CC04
- Optional system-integrated shield connection

<b>BU type A0</b> • Forwarding of load group (dark) • 16 process terminals • Without AUX terminals	6AG2193-6BP00-4BA0	CC01 to CC05	--	1

### Application

- The SIPLUS ET 200SP CM 4XIO-LINK ST T1 RAIL communication module enables data exchange with up to 4 external IO Link devices via one 3-wire cable each.
- Comprehensive parameterization options make it possible to adapt the controller flexibly to the communication partner.
- Thanks to the compatibility of IO-Link with standard sensors, commercially available sensors in accordance with IEC 61131 Type 1 can also be operated on the IO-Link master.

### Design

#### Usable BaseUnits (BU)

All BUs of type A0 are available for the SIPLUS ET 200SP CM 4XIO-LINK ST T1 RAIL communication module.

#### Load group formation

A light-colored BU separates the self-assembling, internal voltage buses (P1, P2, AUX) and thus opens a new load group. The supply voltage of a load group must be fed in at the light BU of this load group.

A dark BU forwards the supply voltage of the adjacent light BU on the left via the self-assembling voltage buses P1, P2 and AUX. A new infeed is therefore only required on the next light BU to the right. The setting of a further light BU is required whenever

- a new load group is to be formed (for example, for isolating the supply voltage from module groups) or
- the maximum current simultaneously required by the load group exceeds the permissible limit of 10 A.

#### Color identification of the terminals

The potentials at the terminals of the BaseUnit are defined by the inserted I/O module in each case. To prevent wiring faults, the potentials of the terminals can optionally be identified by means of module-specific color-coded labels. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

For the communications module "CM 4x IO-Link", the color-coding label with the color code CC04 is to be used.

In BaseUnits with the additional ten internally jumpered AUX terminals, these can also be identified with color-coded labels. For the ten AUX terminals, color-coded labels are available in red, blue, and yellow/green.

### Labeling

#### Labeling strips

Labeling strips can be inserted on the front of the interface modules or I/O modules and individually labeled via STEP 7, macros, etc. No special additional holder is required. If required, they can be easily replaced with the component.

#### Equipment labeling plates

Equipment labeling plates enable the equipment to be easily identified (e.g. compliant with EN 81346). They are easily plugged onto the required component (interface modules, I/O modules and BaseUnits) and when required, they can be easily replaced with the component.

The following labeling components are available:

- Film labeling strips, light-gray, roll with 500 strips, perforated, for thermal transfer printers
- Film labeling strips, yellow, roll with 500 strips, perforated, for thermal transfer printers
- Card labeling strips (180 g/m<sup>2</sup>), light gray, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Card labeling strips (180 g/m<sup>2</sup>), yellow, DIN A4 sheets with 100 strips each, perforated, for laser printer
- Equipment labeling plates, white, ten sheets each with 16 labels, for thermal transfer card printers or labels

#### System-integrated shield connection

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

## Overview

- For data exchange between an ET 200SP system and CAN 2.0A/B or CANopen Manager or Slave (according to CiA 301 & 302)
- CANopen features:
  - Node/lifeguarding
  - Heartbeat
  - SYNC (producer / consumer)
- Integrated in TIA via HSP, TIA Portal V15.1 or higher
- CAN connection with push-in terminals
- Integrated CAN terminating resistor
- Up to 60 CAN nodes
- 128 receiver and 128 transmitter PDOs
- Galvanic isolation between the two networks
- Diagnostic interrupts
- Optionally with function block SIMATIC ECC CHAdEMO: Realization of digital communication as basis for conductible DC charging of electric vehicles in line with the CHAdEMO standard

## Application

The SIPLUS ET 200SP communications module CM CAN is designed to connect an ET 200SP system with the CAN or CANopen fieldbus and enables data exchange.

This gives the option of communicating with up to 60 CAN nodes.

The configuration is carried out in TIA Portal (V15.1 or higher). A corresponding HSP is available to the user.

In CANopen mode, external device description files (.eds files) can be imported and exported.

## Design

- Design as ET 200SP module with a width of 15 mm.
- Use with type "A0" BaseUnits.
- Connection at CAN Bus via push-in terminals on the BaseUnit.
- Terminating resistors can be connected by wiring to the BaseUnit.
- LEDs for visualizing the operating conditions of the module and connected CAN network.
- Power supply via backplane bus. No external power supply required.
- Operation without fans or batteries. Maintenance-free.
- The maximum allowable wire length of the CAN network is 1 000 m (depending on data transfer rate, cable cross-section, number of participants).

## Mode of operation

The cyclic data exchange between the module and the corresponding CPU or interface module takes place via the backplane bus and by updating the I/O image.

Acyclic communication takes place via the "Read/write data record" services.

CAN components are represented as submodules in TIA Portal. Up to 126 CAN components can be integrated.

The communications module supports 128 receiver and 128 transmitter PDOs.

## Function

- Three different operating modes:
  - CANtransparent
  - CANopen Manager
  - CANopen Slave
- Easy engineering and extensive diagnostics options due to optimum TIA integration.
- Data transfer options:
  - After value change/acyclic
  - Cyclic (after parameter assignment at first to 240th "SYNC")
  - On request from the application (RTR)
- Data transfer rates on the CAN side from 10 to 1 000 kBd.
- Optionally with function block SIMATIC ECC CHAdEMO: Realization of digital communication between a DC charging station and an electric vehicle as basis for conductible DC charging of electric vehicles in line with the standard CHAdEMO 1.x...2.0 charging mode 4

## Configuration

An HSP is available for configuration and data mapping of the communications module (TIA Portal V15.1 or higher).

In CANopen Manager and CANtransparent operating modes (CAN 2.0A/B), configuration of the communications module takes place completely in TIA Portal. External software is not required for this purpose.

In CANopen Slave operating mode, the user configures the object directory (OD) of the SIMATIC ET 200SP CM CAN and provides it in the form of an .eds file export to the CANopen Manager.

The configuration data of the communications module is saved in the higher-level SIMATIC S7 controller and transferred during ramp-up. A corresponding function block needs to be called for this purpose.

TIA Portal and Siemens Automation Tool (SAT) are available as update mechanisms.

## Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7
	●			●		●	●

G\_IK10\_XX\_50790

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL communication processor connects the SIPLUS extreme RAIL ET 200SP Distributed Controller with Industrial Ethernet networks.

The module can also be used for integrating the SIPLUS extreme RAIL ET 200SP Distributed Controller into an IPv6-based network. All functions are configured using STEP 7 Professional V14 (TIA Portal) or higher.

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL supports the following communication services:

- PG/OP communication
- S7 communication
- Open communication (Open User Communication)
- IT communication
  - Sending emails via SMTP for authentication on an email server (also with IPv6)
  - SNMPv1 for transfer of network analysis information
- Integration of the ET 200SP Distributed Controller into IPv6-based networks

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL is approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic.

## Benefits

**get** Designed for Industry

- Network separation for setting up identical machines with the same IP addresses
- Optimum support of maintenance due to
  - Simple diagnostics via the central web server
  - Monitoring with IT network management tools (SNMP)
  - Module replacement without a PG
- Securing the system against unauthorized access with
  - Central access protection for any S7 station
  - Access to the central web server
- Simple alerting by email
- Protection of investment thanks to simple integration of the SIPLUS extreme RAIL ET 200SP Distributed Controller in existing networks with SIMATIC S7-300 / S7-400 via Industrial Ethernet using the SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL
- Accessibility of the SIPLUS extreme RAIL ET 200SP Distributed Controller from an IPv6-based infrastructure

## Application

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL is used for connecting the SIPLUS extreme RAIL ET 200SP Distributed Controller to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks.

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL offers communication possibilities with:

- PGs/PCs
- Master computers
- Operator control and monitoring systems
- SIMATIC S7 systems

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL is used in the SIPLUS extreme RAIL ET 200SP system to operate lower-level networks separately, or to implement a separation from the higher-level network.

Application: automation network and lower-level networks are to be operated separately

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL communication > SIPLUS extreme RAIL CP 1542SP-1 IRC****Design**

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL exhibits all the advantages of the ET 200SP design:

- Compact, space-saving design:
  - Module powered via separate power supply
  - Three LEDs for displaying the operating state and communication state of the module as well as LEDs on the BusAdapter.
  - Can be operated simultaneously with BA Send module and CM DP module.
- Simple installation:
 

The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL is mounted on the ET 200SP DIN rail and is connected to the adjacent modules via the backplane bus.

  - The BusAdapter (not included in scope of delivery) makes various connection methods possible
  - For standard ambient conditions, BA 2xRJ45 for connection via RJ45 connector
  - For mechanical loading during operation and/or increased EMC requirements
    - BA 2xFC, BA 2xSCRJ, BA SCRJ/RJ45, BA SCRJ/FC
  - The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL can be operated without a fan; no back-up battery is necessary
  - The module can be replaced without the need for a programming device
- The CP can be equipped with an equipment labeling plate.
- Optional labeling using light gray or yellow labeling strips.
 

Choice of 2 materials:

  - Film and roll with 500 strips, for thermal transfer roll printer
  - Paper (280 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printer

Scope of delivery:

SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL, 24 V DC connector (BusAdapter must be ordered separately)

**Function**

- 2-port interface via BusAdapter with an RJ45 connection with 10/100 Mbps full/half duplex with autosensing functionality
- The SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL communications processor connects the SIPLUS extreme RAIL ET 200SP Distributed Controllers to additional Industrial Ethernet networks
- Communications services:
  - Open communication (TCP/IP, UDP, ISO-on-TCP):
    - Multicast with UDP
  - PG/OP communication: Inter-network with S7 routing
  - S7 communication (client, server)
  - S7 routing
  - IT communication:
    - HTTP communication allows access to the web server of the CPU.
  - The e-mail client function enables sending of emails direct from the user program.
    - IP address assignment via DHCP for IPv4 or via direct entry in the engineering software and via the T\_CONFIG function block
    - STEP 7 Professional V14 (TIA Portal) or higher
- Diagnostics and network management:
  - Extensive diagnostic functions of all modules in the ET 200SP system
  - Integration in network management systems through the support of SNMP V1
- Configuration of all functions with STEP 7 Professional V14 (TIA Portal) or higher
- Module replacement without programming device: All information can be stored on the memory card of the CPU.

6

**Technical specifications**

Article number	<b>6AG2542-6VX00-4XE0</b>
product type designation	SIPLUS ET 200SP CP 1542SP-1 IRC TX RAIL
<b>transfer rate</b>	
<b>at the 1st interface</b>	10 ... 100 Mbit/s
<b>interfaces</b>

### More information

You will find further information on ET 200SP at:  
<http://www.siemens.com/simatic-et200sp>

The TIA Selection Tool is available to assist you in selecting ET 200SP equipment and configuring modular variants:  
<http://www.siemens.com/tst>

You will find more information on the topic of Industrial Security on the Internet at:  
 An ET 200SP Distributed Controller firmware version  $\geq 2.0$  is required for operation of the CP 1542SP-1.

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL communication > SIPLUS extreme RAIL CP 1543SP-1 ISEC****Overview**

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7
	●			●		●	●

G. IK10...XX\_50790

The SIPLUS ET 200SP CP 1543SP-1 ISEC TX RAIL communications processor connects the ET 200SP Distributed Controller with Industrial Ethernet networks. By combining a variety of security features such as an SPI (Stateful Packet Inspection) firewall, VPN and data encryption protocols (e.g. SNMPv3), the communications processor protects individual ET 200SP Distributed Controllers or even entire automation cells against unauthorized access.

The module can also be used for integrating the ET 200SP Distributed Controller into an IPv6-based network. All functions can be configured with STEP 7 Professional, V14 (TIA Portal) and higher.

The SIPLUS ET 200SP CP 1543SP-1 ISEC TX RAIL supports the following communication services:

- PG/OP communication
- S7 communication
- Open communication (Open User Communication)
- IT communication
  - Sending emails via SMTP or ESMTP with "SMTP-Auth" for authentication on an email server (also with IPv6)
- Support of SINEMA Remote Connect with autoconfiguration
- Security Integrated
  - Stateful Packet Inspection Firewall
  - Secure communication via VPN (IPsec)
- Protocols for secure communication
  - Secure access to the web server of the CPU via the HTTPS protocol
  - Secure transfer of the time of day (NTP)
  - SNMPv3 for tap-proof transfer of network analysis information
- Integration of the ET 200SP Distributed Controller into IPv6-based networks

The SIPLUS ET 200SP CP 1543SP-1 ISEC TX RAIL is approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic.

**Benefits**

**get** Designed for Industry

- Prevention of data loss, production disruptions or machine damage by protecting against unauthorized access to the SIPLUS extreme Rail ET 200SP Distributed Controller and lower-level networks
- Network segmentation and network separation for setting up identical machines with the same IP addresses
- Connection to SINEMA RC:
  - With the optional SINEMA Remote Connect, you can benefit from the user-friendly, secure SINEMA Remote Connect management platform for remote maintenance.
- Optimum support of maintenance due to
  - Simple diagnostics via the central web server
  - Monitoring with IT network management tools (SNMP)
  - Module replacement without a PG
- Securing the system against unauthorized access with
  - Central access protection for any S7 station
  - Secure access to the central web server
- Simple alerting by email
- Protection of investment thanks to simple integration of the SIPLUS extreme RAIL ET 200SP Distributed Controller in existing networks with SIMATIC S7-300 / S7-400 / via Industrial Ethernet using the SIPLUS ET 200SP CP 1543SP-1 ISEC TX RAIL
- Accessibility of the SIPLUS extreme RAIL ET 200SP Distributed Controller from an IPv6-based infrastructure

**Application**

The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL is used for connecting the SIPLUS extreme RAIL ET 200SP Distributed Controller to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks.

The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL offers communication possibilities with:

- PGs/PCs
- Master computers
- Operator control and monitoring systems
- SIMATIC S7 systems

It can be used to protect the SIPLUS extreme RAIL ET 200SP Distributed Controller automation system from unauthorized access from an Ethernet network. The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL allows secure remote access via a LAN and enables the data transfer between devices or network segments to be protected from data manipulation/espionage.

Connection to higher-level network and network separation of automation cells

## Design

The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL exhibits all the advantages of the ET 200SP design:

- Compact, space-saving design:
  - Module powered via separate power supply
  - Three LEDs for displaying the operating state and communication state of the module as well as LEDs on the BusAdapter.
  - Simultaneously operable with BA Send module and CM DP module.
- Simple installation:
  - The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL is mounted on the ET 200SP DIN rail and is connected to the adjacent modules via the backplane bus.
  - The BusAdapter (not included in scope of delivery) makes various connection methods possible;
  - For standard ambient conditions, BA 2xRJ45 for connection via RJ45 connector
  - For mechanical loading during operation and/or increased EMC requirements  
BA 2xFC, BA 2xSCRJ, BA SCRJ/RJ45, BA SCRJ/FC
  - The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL can be operated without a fan; no back-up battery is necessary
  - The module can be replaced without the need for a programming device
- The CP can be equipped with an equipment labeling plate.
- Optional labeling using light gray or yellow labeling strips. There is a choice of two materials:
  - Film and roll with 500 strips, for thermal transfer roll printer
  - Paper (280 g/m<sup>2</sup>), DIN A4 sheets with 100 strips each, for laser printer

Scope of delivery:

SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL, 24 V DC connector (BusAdapter must be ordered separately)

## Function

- 2-port interface via BusAdapter with an RJ45 connection with 10/100 Mbps full/half duplex with autosensing functionality
- The SIPLUS ET 200SP CP 1543P-1 ISEC TX RAIL communication processor connects the SIPLUS extreme RAIL ET 200SP Distributed Controller to additional Industrial Ethernet networks
- Communications services:
  - Open communication (TCP/IP, UDP, ISO-on-TCP):  
Multicast with UDP
  - PG/OP communication: Inter-network with S7 routing
  - S7 communication (client, server)
  - S7 routing
  - IT communication:  
HTTP communication allows access to the web server of the CPU. With the CP 1543SP-1, HTTPS communication is also possible.  
The email client function allows e-mails to be sent directly from the user program.  
IP address assignment via DHCP for IPv4 or via direct entry in the engineering software and via the T\_CONFIG function block  
STEP 7 Professional V14 (TIA Portal) or higher
- Support of SINEMA Remote Connect with autoconfiguration
- Diagnostics and network management:
  - Extensive diagnostic functions of all modules in the ET 200SP system
  - Integration in network management systems due to support of SNMP v1/v3
- Security mechanisms:
  - Access protection with firewall for filtering connections on the basis of their IP and MAC addresses
  - Secure communication via VPN (IPsec)
  - Encrypted HTML pages using SSL (HTTPS)
  - Secure transfer of the time of day (NTPS)
- Configuration of all functions with STEP 7 Professional V14 (TIA Portal) or higher
- Module replacement without programming device: All information can be stored on the memory card of the CPU.

**6****More information**

You can find further information on ET 200SP at:

<http://www.siemens.com/simatic-et200sp>

The TIA Selection Tool is available to assist you in selecting ET 200SP equipment and configuring modular variants:

<http://www.siemens.com/tst>

An ET 200SP Distributed Controller firmware version  $\geq 2.0$  is required for operation of the CP 1543SP-1.

## Overview

The fail-safe modules of SIPLUS extreme RAIL ET 200SP expand the range of the ET 200SP series. They are incorporated seamlessly into the Safety Integrated concept as with ET 200S / ET 200M / ET 200iSP and ET200pro. Safety-related communication via PROFIsafe is also supported. The fail-safe modules for digital inputs and outputs (DI and DQ) are the same size as the standard modules. Their functional safety is certified in accordance with IEC 61508. They are designed for safety-related use up to SIL 2 according to EN 50126, 50128, 50129.

One special feature of the F modules of SIPLUS extreme RAIL ET 200SP is that the F-addresses no longer have to be set manually by means of the DIP switches on the module. They are now assigned during commissioning using the engineering function. When replacing a module, the F-addresses of the module remain in the coding of the BaseUnit. If a new module is inserted, these F-addresses are transferred automatically. New assignment of the F-addresses is therefore unnecessary. This new feature simplifies the set-up process and saves time.

### **Totally Integrated Automation (TIA)**

Safety technology (Safety Integrated) is a component of Totally Integrated Automation and provides complete integration of safety and standard automation.

Whereas standard automation (classical PLCs) and safety automation (electro-mechanics) are still separate today, these two worlds are growing together into a uniform, integrated overall system. Siemens is thus able to present itself as a complete supplier of automation technology, in which safety engineering is part of the standard automation and system-wide integration exists.

### **Safety Integrated**

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

SIPLUS extreme RAIL failsafe I/O modules &gt; SIPLUS extreme RAIL digital F-input modules

**Overview**

Digital fail-safe input module:  
SIPLUS ET 200SP F-DI 4/8X24VDC RAIL for BU type A0, color code CC01

Important features:

- 8-channel digital fail-safe input module for SIPLUS extreme ET 200SP RAIL
- Approved in accordance with railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For fail-safe reading of sensor information (1 or 2 channels)
- Provides integral discrepancy evaluation for 2-out-of-2 signals
- 8 internal sensor supplies (incl. test function) onboard
- Certified up to SIL 3 (IEC 61508), PL e (ISO 13849)
- Can be plugged into type A0 BaseUnits (BU) with automatic coding
- LED display for error, operation, supply voltage and status
- Clear labeling on the front of module
  - Plain text identification of the module type and function class
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Color coding of the DI module type: White
  - Hardware and firmware version
  - CC color code for module-specific color coding of the potentials at the terminals of the BU
  - Complete article no.
- Optional labeling accessories
  - Labeling strips
  - Equipment labeling plate
- Optional module-specific color identification of the terminals according to the color code CC
- Optional system-integrated shield connection
- The modules support PROFIsafe in both PROFIBUS and PROFINET configurations. They can be used with all fail-safe SIMATIC S7 CPUs.

**Application**

The fail-safe modules of SIPLUS extreme ET 200SP RAIL can be used to implement the safety-related application requirements as an integral part of the overall automation. The safety functions required for fail-safe operation are integrated in these modules. Communication with the fail-safe SIMATIC S7 CPUs is performed by means of PROFIsafe.

The modules can be operated both in centralized and distributed configurations.

**Design****Usable BaseUnits**

For a single- or multi-conductor connection, BaseUnits with an appropriate number of terminals are available.

A light BaseUnit opens a new load group. The power supply to the sensors must be fed via this BU. The first BU next to the interface module must always be a light BU.

A dark BaseUnit forwards the power supply of the adjacent light BaseUnit on the left via self-assembling voltage buses. A new in-feed is therefore only required on the next light BaseUnit to the right.

All variants that correspond to the BU type of the I/O module can be used as BaseUnits.

**Color identification of the terminals**

The potentials at the terminals of the BaseUnit are defined by the I/O module. Optionally, the potentials of the terminals can be identified by module-specific color-coding labels to prevent wiring errors. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the 10 internally jumpered AUX terminals, these can also be identified with color coding labels. For the 10 AUX terminals, color-coding labels are available in red, blue, and yellow/green.

**System-integrated shielded connection**

For the connection of cable shields that is both space-saving as well as optimized in terms of EMC, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL failsafe I/O modules > SIPLUS extreme RAIL digital F-output modules****Overview**

Important properties:

- 4-channel digital fail-safe output module for SIPLUS extreme ET 200SP RAIL
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Fail-safe 2-channel activation (sinking/sourcing output) by actuators
- Actuators can be controlled up to 2 A or 0.5 A
- Certified up to SIL 3 (IEC 61508), PL e (ISO 13849)
- Can be plugged into type A0 BaseUnits (BU) with automatic coding
- LED display for error, operation, supply voltage and status
- Clear labeling on front of module
  - Plain text identification of the module type and function class
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Color coding of the DI module type: White
  - Hardware and firmware version
  - CC color code for module-specific color coding of the potentials at the terminals of the BU
  - Complete Article No.
- Optional labeling accessories
  - Labeling strips
  - Equipment labeling plate
- Optional module-specific color identification of the terminals according to the color code CC
- Optional system-integrated shield connection
- The modules support PROFIsafe in both PROFIBUS and PROFINET configurations
- They can be used with all fail-safe SIMATIC S7 CPUs

**Application**

The fail-safe modules of SIPLUS extreme ET 200SP RAIL can be used to implement the safety-related application requirements as an integral part of the overall automation. The safety functions required for fail-safe operation are integrated in these modules. Communication with the fail-safe SIMATIC S7 CPUs is performed by means of PROFIsafe.

The modules can be operated both in centralized and distributed configurations.

**Design****Suitable BaseUnits**

BaseUnits with an appropriate number of terminals are available for single and multi-conductor connections.

A light BaseUnit opens a new load group. The supply voltage to the sensors must be fed via this BU. The first BU next to the interface module must always be a light BU.

A dark BaseUnit forwards the supply voltage of the adjacent light BaseUnit on the left via self-assembling voltage buses. A new infeed is therefore only required on the next light BaseUnit to the right.

All variants that correspond to the BU type of the I/O module can be used as BaseUnits.

**Color coding of the terminals**

The potentials at the terminals of the BaseUnit are defined by the I/O module. Optionally, the potentials of the terminals can be identified by module-specific color-coding labels to prevent wiring errors. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the 10 internally jumpered AUX terminals, these can also be identified with color-coding labels. For the 10 AUX terminals, color-coding labels are available in red, blue, and yellow/green.

## Overview

The digital F-electronic module SIPLUS ET 200SP F-RQ 24VDC230VAC/5A RAIL has the following properties:

- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- 1 relay output (2 NO contacts)
- Total output current 5 A
- Rated load voltage 24 V DC and 24 ... 230 V AC
- The control circuit of the two safety relays must be routed from the outside to the respective terminals.

The attainable safety integrity level is SIL 3 (IEC 61508) when the control of the F-RQ module is implemented via a fail-safe output (e.g. of SIPLUS ET 200SP F-DQ 4x24VDC High Feature T1 RAIL).

## Application

The 1 F-RQ module is very versatile and can be used in multiple ways, e.g.

- for switching of external voltages,
- when floating signals are needed,
- for controller releases,
- when higher switching capacities (> 2 A) or other voltage levels are needed.

## Design

Control must be carried out from the outside via a fail-safe electronic module to the respective IN P and IN M terminals. The ET 200SP 4 F-DQ (6AG2136-6DB00-1CA0) can be used for this, for example.

One channel of the 4 F-DQ module can be used to control a further 1 F-RQ module. The output signal can be looped through for this purpose: OUT P and OUT M of the first 1F-RQ module are wired to IN P and IN M of the second 1F-RQ module.

## Technical specifications

Article number	<b>6AG2136-6RA00-1BF0</b> SIPLUS ET 200SP F-RQ 24VDC230VAC/5A RAIL
<b>General information</b>	
<b>Product type designation</b>	F-RQ 1x24 V DC/24 ... 230 V AC/5 A
<b>Supply voltage</b>	
<b>Rated value (DC)</b>	24 V; Coil voltage
<b>Digital outputs</b>	
<b>Type of digital output</b>	Relays
<b>Number of digital outputs</b>	1
<b>Limitation of inductive shutdown voltage to</b>	No
<b>Controlling a digital input</b>	Yes
<b>Switching capacity of the outputs</b>	
• with resistive load, max.	5 A
• on lamp load, max.	25 W
<b>Switching frequency</b>	
• with resistive load, max.	2 Hz
• with inductive load, max.	0.1 Hz; See data in manual
• with inductive load (acc. to IEC 60947-5-1, DC13), max.	0.1 Hz
• with inductive load (acc. to IEC 60947-5-1, AC15), max.	2 Hz
<b>Total current of the outputs (per module)</b>	
• horizontal installation	
- up to 40 °C, max.	5 A; note derating data in the manual
- up to 50 °C, max.	4 A; note derating data in the manual
- up to 60 °C, max.	3 A; note derating data in the manual
- up to 70 °C, max.	3 A; note derating information in the manual; only with configured slots to the left and right of the module
• vertical installation	
- up to 50 °C, max.	3 A; note derating data in the manual
<b>Relay outputs</b>	
• Number of relay outputs	1; 2 NO contacts
• Rated supply voltage of relay coil L+ (DC)	24 V
• Current consumption of relays (coil current of all relays), max.	70 mA
• external protection for relay outputs	yes; 6 A, see data in manual
• Relay approved acc. to UL 508	Yes; Pilot Duty B300, R300

**SIPLUS RAIL**

SIPLUS ET 200SP RAIL

SIPLUS extreme RAIL I/O modules

**SIPLUS extreme RAIL failsafe I/O modules > SIPLUS extreme RAIL analog F-input modules****Overview**

Analog fail-safe input module:

- F-AI 4xI 0(4)..20 mA 2/4-wire High Feature for BU types A0 and A1, color code CC00
- F-AI 4xU 0..10 V HF, BU type A0, A1, color code CC00

Important features:

- Approved in accordance with railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- 4-channel analog fail-safe input module for ET 200SP
- 4 analog inputs with galvanic isolation between channels and backplane bus
- Measuring ranges: (0)4...20 mA
- Connection option for current sensors for measuring temperature, pressure, flow, level, distance measurement, etc.
- Short-circuit-proof power supply for analog sensors
- Resolution: 16 bits including sign
- Certified up to SIL 3 (IEC 61508), PL e (ISO 13849)
- Can be plugged onto type A0 and A1 BaseUnits (BU)
- LED display for error, operation, supply voltage and status
- Interference frequency suppression, smoothing
- Diagnostics: Wire break, short-circuit
- Firmware update
- Identification data I&M
- Value status
- Clear labeling on the front of module
  - Plain text identification of the module type and function class
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Color coding of the DI module type: White
  - Hardware and firmware version
  - CC color code for module-specific color coding of the potentials at the terminals of the BU
  - Complete article no.
- Optional labeling accessories
  - Labeling strips
  - Equipment labeling plate
- Optional module-specific color identification of the terminals according to the color code CC
- Optional system-integrated shield connection
- The modules support PROFIsafe in both PROFIBUS and PROFINET configurations. They can be used with all fail-safe SIMATIC S7 CPUs.

**Application**

The fail-safe modules of ET 200SP can be used to implement the safety-related application requirements as an integral part of the overall automation. The safety functions required for fail-safe operation are integrated in these modules. Communication with the fail-safe SIMATIC S7 CPUs is performed by means of PROFIsafe.

The modules can be operated both in centralized and distributed configurations.

**Design**Suitable BaseUnits

BaseUnits with an appropriate number of terminals are available for single and multi-conductor connections.

A light BaseUnit opens a new load group. The supply voltage to the sensors must be fed via this BU. The first BU next to the interface module must always be a light BU.

A dark BaseUnit forwards the supply voltage of the adjacent light BaseUnit on the left via self-assembling voltage buses. A new feed is therefore only required on the next light BaseUnit to the right.

All variants that correspond to the BU type of the I/O module can be used as BaseUnits.

Color identification of the terminals

The potentials at the terminals of the BaseUnit are defined by the I/O module. Optionally, the potentials of the terminals can be identified by module-specific color-coding labels to prevent wiring errors. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

System-integrated shield connection

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. It consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

## Overview

Digital fail-safe power module:  
F-PM-E PPM 24 V DC/8 A for BU type C0, color code CC52

Other properties:

- Certified up to SIL 3 (IEC 61508), PL e (ISO 13849)
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- Safety-related shutdown of output modules within the potential group of the F-PM-E
- Two fail-safe digital inputs, for reading of sensor information (1 or 2 channels)
- One fail-safe digital output onboard (ppm switching, up to 2 A, up to SIL 3/PL e)
- Fail-safe digital output and potential supply pp or pm switching can be parameterized
- Parameterizable onboard evaluation of the fail-safe inputs for control of the fail-safe digital outputs and of the potential group
- Digital standard output modules can be shut down up to PL d (ISO 13849) and SIL 2 (IEC 61508) (up to 8 A).
- Can be plugged into type C0 BaseUnits (BU) with automatic coding
- LED display for error, operation, supply voltage and status
- Clear labeling on front of module
  - Plain text identification of the module type and function class
  - 2D matrix code (order and serial number)
  - Connection diagram
  - Color coding of the module type DI: white
  - Hardware and firmware version
  - Color code CC for module-specific color coding of the potentials at the BU terminals
  - Complete Article No.
- Optional labeling accessories
  - Labeling strips
  - Equipment labeling plate
- Optional module-specific color identification of the terminals according to the color code CC
- Optional system-integrated shield connection
- The modules support PROFIsafe in both PROFIBUS and PROFINET configurations.
- They can be used with all fail-safe SIMATIC S7 CPUs

## Application

The fail-safe modules of SIPLUS extreme ET 200SP RAIL can be used to implement the safety-related application requirements as an integral part of the overall automation. The safety functions required for fail-safe operation are integrated in these modules. Communication with the fail-safe SIMATIC S7 CPUs is performed by means of PROFIsafe.

The modules can be operated both in centralized and distributed configurations.

## Design

### Usable BaseUnits

For a single- or multi-conductor connection, BaseUnits with an appropriate number of terminals are available.

A light BaseUnit opens a new load group. The power supply to the sensors must be fed via this BU. The first BU next to the interface module must always be a light BU.

A dark BaseUnit forwards the power supply of the adjacent light BaseUnit on the left via self-assembling voltage buses. A new in-feed is therefore only required on the next light BaseUnit to the right.

All variants that correspond to the BU type of the I/O module can be used as BaseUnits.

### Color identification of the terminals

The potentials at the terminals of the BaseUnit are defined by the I/O module. Optionally, the potentials of the terminals can be identified by module-specific color-coding labels to prevent wiring errors. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with the 10 internally jumpered AUX terminals, these can also be identified with color coding labels. For the 10 AUX terminals, color-coding labels are available in red, blue, and yellow/green.

### System-integrated shielded connection

For the connection of cable shields that is both space-saving as well as optimized in terms of EMC, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

## Overview

With the BaseUnits (BUs), the SIPLUS extreme RAIL ET 200SP offers a rugged and service-friendly design with permanent wiring:

- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- No tools needed for one-handed wiring using push-in terminals
- Actuation of the spring NC contacts with a standard screwdriver, with a blade width up to 3.5 mm
- Outstanding access due to arrangement of measuring tap, spring NC contacts and cable entry in columns, while at the same time reducing the space required by 64%
- Fault-proof color coding of the spring NC contacts for better orientation in the terminal panel
- Replacement of I/O modules during operation without affecting the wiring
- Operation with module gaps (gaps without I/O module)
- Automatic coding of the I/O modules prevents destruction of the electronics if a module is accidentally inserted in the wrong slot during replacement
- High EMC interference immunity:
  - Self-assembling shielded backplane bus
  - multi-layer conductor plate with shield levels for interference-free signal transmission from the terminal to the I/O module,
  - System-integrated, space-saving shield connection for quick installation
- Self-assembling potential groups without external wiring or jumpers
- Replaceable terminal box
- Side-by-side latching of the BUs for high mechanical and EMC loads
- Optional module-specific color identification of the terminals according to the color code CC
- Optional equipment marking using slide-in equipment labeling plates

## Design

The different BaseUnits (BU) facilitate the exact adaptation to the required type of wiring. This enables users to select economical connection systems for the I/O modules used for their task. The TIA Selection Tool assists in the selection of the BaseUnits most suitable for the application.

BaseUnits with the following functions are available:

- Single-conductor connection, with direct connection of the shared return conductor
- Direct multi-conductor connection (2, 3 or 4-wire connection)
- Recording of the terminal temperature for the internal temperature compensation for thermocouple measurements
- AUX or additional terminals for individual use as voltage distribution terminal

The BaseUnits (BU) can be plugged onto DIN mounting rails compliant with EN 60715 (35 x 7.5 mm or 35 mm x 15 mm). The BUs are arranged next to one another beside the interface module, thereby safeguarding the electromechanical link between the individual system components. An I/O module is plugged onto the BUs, which ultimately determines the function of the respective slot and the potentials of the terminals.

### Load group formation

Scalable I/O systems usually offer the possibility of individual load group formation. In the case of distributed I/O devices, this previously required an additional power module (feed module) that provided the separation from the left-hand load group as well as the infeed, display, monitoring, and diagnostics of the load voltage. It also featured a filter function against external interference and offered protection against polarity reversal.

All of these functions are now integrated into the basic components of the system in the ET 200SP. For users, this means the elimination of the power module. This saves an additional slot for each load group, resulting in greater flexibility in terms of configuration and ultimately, a saving of storage space.

A light-colored BU separates the self-assembling, internal voltage buses (P1, P2, AUX) and thus opens a new load group. The power supply of a load group must be fed in at the light BU of this load group.

A dark BU forwards the power supply of the adjacent light BU on the left via the self-assembling voltage buses P1, P2 and AUX. A new infeed is therefore only required on the next light BU to the right. The setting of a further light BU is required whenever

- a new load group is to be formed (for example, for isolating the supply voltage from module groups) or
- the maximum current simultaneously required by the load group exceeds the permissible limit of 10 A.

### Labeling

#### Equipment labeling plates

Equipment labeling plates enable the equipment to be easily identified (e.g. compliant with EN 81346). They are easily plugged onto the required component (interface modules, I/O modules and BaseUnits) and when required, they can be easily replaced with the component.

The following labeling components are available:

- Equipment labeling plates, white, ten sheets each with 16 labels, for thermal transfer card printers or labels

# SIPLUS RAIL

## SIPLUS ET 200SP RAIL

### SIPLUS extreme RAIL BaseUnits

#### Color identification of the terminals

The potentials at the terminals of the BaseUnit are defined by the I/O module. Optionally, the potentials of the terminals can be identified by module-specific color-coded labels to prevent wiring errors. The color-coded label that matches the respective I/O module is defined by the color code CCxx of the I/O module. This color code is also printed on the front of the module.

In BaseUnits with 10 internally jumpered AUX terminals, these can also be identified with color-coded labels. For the 10 AUX terminals, color-coded labels are available in red, blue, and yellow/green.

#### System-integrated shielded connection

For the space-saving and EMC-optimized connection of cable shields, a shield connection is available that is quick and easy to mount. This consists of one shield connection element that can be plugged onto the BaseUnit and one shield terminal for each module. The low-impedance connection to the functional ground (DIN rail) is achieved without any additional wiring by the user.

The BaseUnits can be equipped with an equipment labeling plate.

<p><b>Usable SIPLUS extreme RAIL BaseUnits, type U0</b></p> <p><b>SIPLUS ET 200SP BU20-P16+A0+2B TX RAIL</b>            Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic            BU type U0; BaseUnit (dark) with 16 process terminals to the module; for continuing the load group</p>	<p><b>6AG2193-6BP00-4BU0</b></p>
<p><b>SIPLUS ET 200SP BU20-P16+A0+2D TX RAIL</b>            Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic            BU type U0; BaseUnit (light) with 16 process terminals to the module; for starting a new load group (max. 10 A)</p>	<p><b>6AG2193-6BP00-4DU0</b></p>
<p><b>Accessories</b></p> <p><b>SIPLUS Mounting Kit ET 200SP</b>            Mounting accessories for use with increased mechanical vibration and shock loads. Can be used with SIPLUS BaseUnits with heights up to 117 mm, types A0/A1 without AUX or add-on terminals as well as types B0, B1, C0, C1, D0, U0</p>	<p><b>6AG1193-6AA00-0AA0</b></p>

## SIPLUS RAIL

### SIPLUS ET 200SP RAIL

#### SIPLUS extreme RAIL BusAdapters

##### Overview

BusAdapters (BA) are available for the SIPLUS extreme RAIL ET 200SP:

- SIPLUS extreme RAIL BusAdapter for the free selection of the connection system (pluggable or direct connection) of PROFINET to devices with a SIPLUS extreme RAIL BusAdapter interface. Another benefit of the SIPLUS extreme RAIL BusAdapter: only the adapter needs to be replaced for subsequent conversion to the rugged FastConnect technology or to repair defective RJ45 sockets.

##### Application

###### SIPLUS extreme RAIL BusAdapter

In standard applications with moderate mechanical and EMC loads, SIMATIC BusAdapters with an RJ45 interface can be used, e.g. the BusAdapter BA 2xRJ45.

For machines and systems in which higher mechanical and/or EMC loads act on the devices, a SIMATIC BusAdapter with connection via FastConnect (FC) or fiber-optic cable (SCRJ or LC) is recommended.

An overview of the essential properties of the PN interfaces is shown in the table below

PN interfaces for SIMATIC BusAdapters	Cable connection (FOC)	max. cable length	EMC and mechanical loading	Can be used on devices with SIMATIC BA-interface
RJ45	PROFINET copper cable, pluggable	50 m	Moderate	All
FC (FastConnect)	PROFINET copper cable, direct connection	50 m	Increased 5 times	All

##### Design

###### SIPLUS extreme RAIL BusAdapter

- Are plugged onto the device with SIMATIC BusAdapter interface and can be equipped with an equipment labeling plate for identification of the equipment.
- BusAdapters with a copper interface can be used on all devices with a SIPLUS extreme RAIL BusAdapter interface.
- BusAdapter with FOC interface can be used on selected devices with SIMATIC BusAdapter interface (e.g. ET 200SP interface modules with High Feature function class or above, CPU 1512SP (F), etc.)
- Versions with two PN copper interfaces (RJ45 or FastConnect (FC)):
  - BA 2xRJ45 with 2 RJ45 sockets
  - BA 2xFC with 2 FastConnect connections

##### Assembly

###### FastConnect (FC)

Using the FastConnect stripping tool, the outer sheath and braided shielding can be quickly and conveniently removed from Industrial Ethernet FastConnect cables in one simple operation. The detached PN bus cable is connected directly to the FC connector by means of the FastConnect terminals – in a similar way to the PROFIBUS connector, tried and tested in millions of applications. It is then only necessary to close the cover and lock it with the slider (no tools required).

FastConnect stripping tool

## RJ45

In principle, all industry standard RJ45 Ethernet connectors can be used here. If the PN cable is to be assembled on site, the FastConnect stripping tool can also be used here in connection with the "Industrial Ethernet FastConnect RJ45 Plug 180" connector.

IE FC RJ45 Plug 180

**SIPLUS RAIL**

SIPLUS ET 200MP RAIL

SIPLUS extreme RAIL interface modules

**SIPLUS ET 200MP IM 155-5 PN ST TX RAIL****Overview**

- Interface modules for linking the ET 200MP to PROFINET
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- They handle data exchange with the PROFINET IO Controller in the PLC
- Integrated 2-port switch for line topology
- Max. 30 I/O modules
- Shortest bus cycle 250 µs

- Linking to the isochronous task of the CPU
- Prioritized fast startup (FSU) with 500 ms (max. 12 I/O modules)
- Media Redundancy Protocol (MRP)
- Shared device on up to 2 I/O controllers (when configuring using GSD file; depends on the respective configuration tool)
- Omission of SIMATIC Memory Card (SMC); IM replacement without PG using LLDP
- Operation of F-modules and PROFIsafe

As of firmware version 2.0.0, the SIPLUS ET 200MP interface module IM 155-5 PN ST TX RAIL offers the following new functions:

- Submodule-granular shared device with up to two IO controllers
- Configuration control (option handling)
- Module shared input and module shared output (MSI/MSO), i.e. the inputs or outputs of a module can be made available simultaneously to up to two IO controllers

SIPLUS ET 200MP interface module IM155-5 PN HF T1 RAIL features the following additional functions:

- Shared device on up to 4 IO controllers
- Module internal shared input and module shared output (MSI/MSO) on up to four IO controllers
- Operation on a high-availability SIMATIC S7-400H
- Support for the MRPD function (media redundancy with planned duplication)

**Application**

SIPLUS ET 200MP IM 155-5 PN ST TX RAIL and IM 155-5 PN HF T1 RAIL interface modules enables connection of the ET 200MP to PROFINET and handle communication between the modules and the higher-level I/O controller autonomously.

**Design**

SIPLUS ET 200MP IM 155-5 PN ST TX RAIL and IM 155-5 PN HF T1 RAIL interface modules are directly screwed onto the S7-1500 mounting rail. They feature:

- Diagnostics displays for errors (Error), operation (RUN), maintenance (MAINT), and one link LED per port
- Connection to PROFINET using RJ45 connector
- 24 V DC supply unit for looping through the supply voltage
- Protection of interface module against unauthorized access possible using lock, seal or cable tie

## SIPLUS RAIL

### SIPLUS extreme RAIL gateways

#### SIPLUS NET PN/PN Coupler T1 RAIL

##### Overview

- Fast deterministic data exchange between CPUs with PROFINET controller, even beyond network boundaries
- Configuration with two PROFINET devices completely independent of the communication technology

Data transmission between two S7-1500 IO controllers beyond a PROFINET limit

- Very simple configuration of the data exchange via virtual IO modules or alternatively via data records for larger amounts of data
- Simultaneous data transfer to up to 3 CPUs on own network side and/or up to 4 CPUs on opposite network side
- Easy to integrate into any PROFINET network with 2 ports per network side
- Fieldbus connection via a SIMATIC BusAdapter; this allows free selection of the connection system (RJ45, FC cable direct connection) and connection hardware (copper, POF, PCF, glass fiber). FO-to-copper media conversion can also be realized economically and without external converters.

##### Additional functions

- Quantity structures
  - Cyclic transmission: Up to 1440 bytes each for input and output data
  - Data record transfer: Up to 4096 bytes per slot. Buffering of up to eight data records per slot
  - Maximum 16 input/output areas for data exchange
  - Max. 254 bytes of input and 253 bytes of output data per module
- Exchange of fail-safe data between two F-CPU's via F-SendDP and F\_ReceiveDP
- Shared device with up to four IO controllers per network side
- Module-internal shared input / shared output (MSI/MSO)
- Device replacement without programming device
  - With topological configuration via proximity detection (LLDP)
  - Without topological configuration via redundant storage of the station name in the BusAdapter. A separate removable memory card is not required.
- Reset button for restoring the factory settings
- Redundant power supply
- Electrical isolation between the two PROFINET IO subnets
- Media redundancy (MRP and MRPD)
- I&M data
- Firmware update
- Support for Ethernet services (ping, arp, SNMP, MIP-2, LLDP)
- Comprehensive diagnostics via LED displays and interrupts
- Extensive compatibility with the PN/PN coupler up to firmware version V3.0

##### Application

The PN/PN coupler is used whenever easy-to-configure, fast (deterministic) data exchange between PROFINET controllers is required. Data transmission can be performed both beyond network boundaries as well as within a single network side.

##### Design

The PN/PN coupler features an enclosure with the dimensions 100 x 117 x 75 mm (WxHxD). It is snapped onto a DIN rail (7.5 mm or 15 mm).

Two galvanically isolated plug-in connections are available for the power supply.

Accessories (not included in the PN/PN coupler scope of supply):

- SIMATIC BusAdapter: For connecting the PN/PN coupler to the PROFINET PN IO networks.
- Labeling strips (material: Foil or paper, color: light gray or yellow) and reference identification labels: For the labeling.
- Strain relief: The space-saving system-integrated strain relief for the PROFINET cable is quickly assembled and allows the use of the PN/PN coupler even with increased mechanical stress.
- Connector: Suitable connectors for the PROFINET cable may be required depending on the BusAdapter used.

## Function

The PN/PN coupler provides the output data of the writing CPU as input data to the receiving CPUs within a PN cycle. Both fail-safe data (via F\_SendDP/F\_ReceiveDP of a SIMATIC F-CPU only) and standard data can be transmitted.

- Transfer to the opposite side of the network:  
In a PN cycle, the writing CPU provides its output data as input data at the same time as up to four CPUs connected to the other side of the network. The network separation between the two network sides remains completely intact.
- Transfer to the same side of the network:  
In a PN cycle, the writing CPU provides its output data as input data at the same time as up to three other CPUs connected to its own side of the network.

Two basically different methods are available for data transmission:

- Data exchange via virtual I/O modules (coupling modules):  
The local CPU reads the values that the CPU of the other subnet writes over the configured outputs of the coupling partner through the configured inputs of a slot. The local CPU writes values via the configured outputs of a slot. These values are received by the CPU of the other subnet via the configured inputs of the coupling partner.
- Data record transfer:  
Publisher and Storage modules types are used. These consist of read and write combinations. The module types address the data record order by module addresses during data record transfer.

The PN/PN coupler provides extensive diagnostic information about LEDs, interrupts and status bytes. In this way, errors can be quickly located and commissioning and downtimes minimized.

The PN/PN coupler supports a variety of SIMATIC BusAdapters for flexible connection to PROFINET.

Version	Article No.
<p><b>SIPLUS PN/PN Coupler TX RAIL</b></p> <p>Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic</p> <p>For deterministic data exchange between max. 4 PN controllers per side, also beyond network boundaries; transfer of PROFIsafe, I/O, MSI, MSO and data record communication, redundant power supply PN connection via SIMATIC BusAdapter (BA); supplied without BusAdapter;</p> <p>Suitable for areas with extreme exposure to environmental substances (conformal coating); Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)</p>	<p><b>6AG2158-3AD10-4XA0</b></p>

#### Overview

- For data exchange between PROFINET and CAN Bus 2.0A/B or CANopen Manager or Slave (according to CiA 301 & 302)
- Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- CANopen features:
  - Node / lifeguarding
  - Heartbeat
  - SYNC (producer / consumer)
- Integrated in TIA via HSP, TIA Portal V14 or higher
- PROFINET switch and 9-pin D-sub plug integrated for CAN
- Up to 126 CAN nodes
- 512 receiver/transmitter PDOs
- Electrical isolation between the two networks
- Diagnostic interrupts
- Controllers supported: S7-1200, S7-1500, ET 200SP, Open Controller

#### Application

The SIMATIC PN/CAN LINK connects a PROFINET network to the CAN or CANopen fieldbus, and enables the data exchange.

This gives the user the option of communicating with up to 126 CAN nodes.

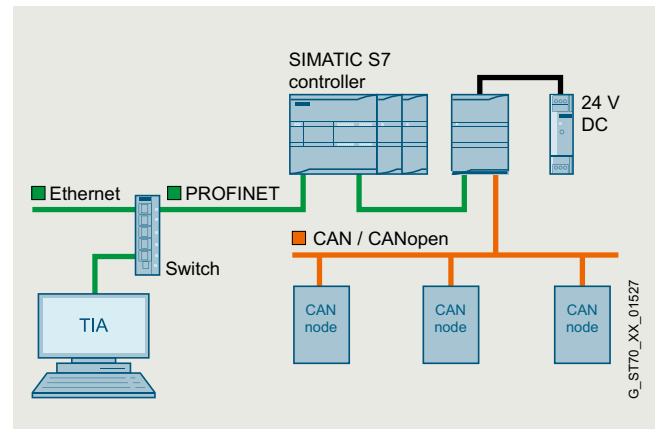

The configuration is made in the TIA Portal V14 or higher. A corresponding HSP is available to the user.

In CANopen mode, external device description files (.eds files) can be imported and exported.

The SIMATIC PN/CAN LINK has an internal PROFINET switch and integrates itself seamlessly into a PROFINET network.

#### Design

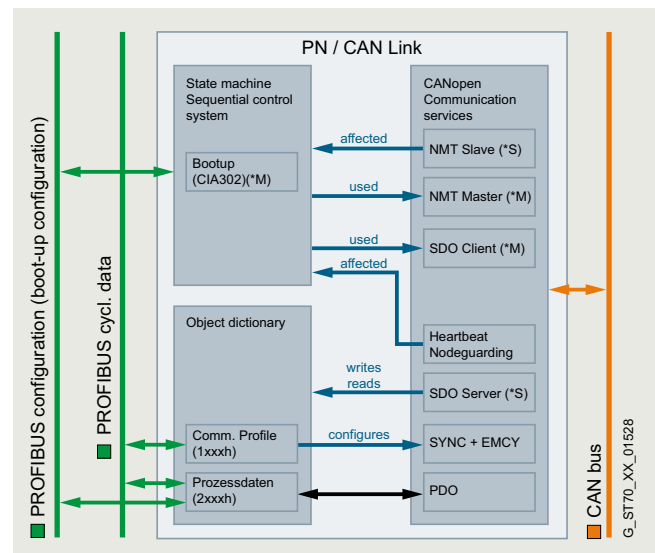

- S7-1200-type enclosure, width 70 mm
- Can be mounted on a standard DIN rail or a control panel
- Connection to PROFINET PN IO networks exclusively via PROFINET by RJ45 connectors
- Connection to CAN Bus via a D-sub connector (9-pin, socket)
- 3-pin connection of the external 24 V DC supply voltage
- Operation without fans or batteries
- LED for visualization of the operating states for CAN, PROFINET and PROFINET ports
- Maximum permissible cable length of the CAN network up to 1 000 m (depending on data transmission rate, cable cross-section, number of participants)

SIMATIC PN/CAN link gateway System configuration

#### Mode of operation

The following overview diagram shows the communication relationships between CAN and PROFINET:

SIMATIC PN/CAN link gateway CANopen communication principle

**SIPLUS RAIL**

## SIPLUS extreme RAIL gateways

**SIPLUS PN/CAN LINK TX RAIL****Function**

- PROFINET IO device
- Controllers supported: S7-1200, S7-1500, ET 200SP, Open Controller
- Supports 512 receiver and 512 transmitter PDOs
- Baud rate from 50 kbaud to 1 000 kbaud on the CAN side
- Three different operating modes:
  - CANtransparent
  - CANopen Manager
  - CANopen Slave
- Data transmission options:
  - After value change / acyclic
  - Cyclic (after parameter assignment at first to 240th "SYNC")
  - On request out of the application (RTR)
- Cyclic data exchange between the PN/CAN LINK and the connected SIMATIC S7-CPU via update of the IO image
- Acyclic communication via the "Read/write data record" services
- Easy engineering and extensive diagnostics options due to optimum TIA integration

**Configuration**

- Configuration or data mapping of the SIMATIC PN/CAN LINK via HSP (TIA Portal V14 and higher)
  - CANopen Manager and CANtransparent operating modes (CAN Bus 2.0A/B):  
Complete configuration of the PN/CAN LINK in the TIA Portal. External software is not required.
  - CANopen Slave operating mode  
Configuration of the object directory (OD) of the PN/CAN LINK. The OD is then made available to the CANopen Manager with .EDS file export.
- Saving the configuration data of the SIMATIC PN/CAN LINK in the higher-level SIMATIC S7 controller, automatic transmission during start up
- Representation of the CAN components as submodules in the TIA Portal. Up to 126 CAN components can be integrated.
- Update mechanisms: TIA Portal and Siemens Automation Tool (SAT)

**Selection and ordering data**

Version	Article No.
<b>SIPLUS PN/CAN LINK TX RAIL</b> Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic PROFINET network transition according to CAN Bus 2.0A/B, CANopen Manager according to CiA301/302, CANopen Slave according to CiA301/302; IP20 Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2620-0AA00-4AA0</b>

## Overview

- For data exchange between PROFINET and SAE J1939 networks
- Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic
- J1939 functions:
  - Broadcast Announce Message (BAM)
  - Connection Mode Data Transfer (CMDT)
  - PDU 1 & 2
- Integrated into Totally Integrated Automation via gsdml file in TIA Portal. No separate software required
- Integrated PROFINET switch with 9-pin D-sub socket for J1939
- Up to 253 logical nodes
- Up to 30 addressable ECUs
- Electrical isolation between the two networks
- Diagnostic interrupts
- Supported controllers: S7-1200, S7-1500, ET 200SP, Open Controller

## Application

The SIMATIC PN/J1939 LINK integrates seamlessly into PROFINET networks and facilitates data exchange between the network and the SAE J1939 fieldbus. Communication with up to 253 logical nodes is possible.

## Design

- S7-1200-type enclosure, width 70 mm
- Can be mounted on a DIN rail or a control panel
- LEDs for visualizing the operating states for J1939, PROFINET and PROFINET ports
- Internal PROFINET switch
- Connection to PROFINET PN IO networks exclusively via PROFINET with RJ45 plug connectors
- Connection to SAEJ1939 bus via D-sub (9-pin, socket)
- 3-pin connection of the external 24 V DC supply voltage
- Operation without fans or batteries
- Maximum permissible cable length of the J1939 network up to 1 000 m (depending on data transmission rate, cable cross-section, number of participants). Baud rates of 100 kbaud, 250 kbaud and 500 kbaud are supported.

SIMATIC PN/J1939 LINK Gateway system configuration

## Mode of operation

The SIMATIC PN/J1939 LINK configuration data is stored in the higher-level SIMATIC S7 PLC and automatically transmitted during start up.

Cyclic data exchange between the PN/J1939 LINK and the connected SIMATIC S7 CPUs is performed by updating the IO image.

Acyclic communication is via the "Read/write data record" services.

LEDs visualize the operating states for J1939, PROFINET and PROFINET ports.

## Function

- PROFINET IO device
- Supported controllers: S7-1200, S7-1500, ET 200SP, Open Controller
- Easy engineering and extensive diagnostics options due to optimum TIA integration
- Update mechanisms via TIA Portal and the Siemens Automation Tool (SAT)
- J1939 functions:
  - Broadcast Announce Message (BAM)
  - Connection Mode Data Transfer (CMDT)
  - PDU 1 & 2

## Configuration

- Configuration in the TIA Portal via .gsdml file. No separate software required
- PGNs (Parameter Group Number) freely configurable

**SIPLUS PN/J1939 LINK TX RAIL****Technical specifications**

Article number	<b>6AG2623-0AA00-4AA0</b> SIPLUS PN/J1939 LINK TX RAIL
<b>General information</b>	
<b>Product type designation</b>	PN/J1939 LINK
<b>Product function</b>	
• I&M data	Yes
• Isochronous mode	No
<b>Engineering with</b>	
• STEP 7 TIA Portal configurable/integrated from version	see entry ID: 109746275
<b>Installation type/mounting</b>	
<b>Mounting</b>	DIN rail, wall mounting, portrait mounting
<b>Mounting position</b>	any
<b>Recommended mounting position</b>	Horizontal
<b>Rail mounting</b>	Yes
<b>Control cabinet installation</b>	Yes
<b>Supply voltage</b>	
<b>Type of supply voltage</b>	DC
<b>Rated value (DC)</b>	24 V
<b>Reverse polarity protection</b>	Yes
<b>Overvoltage protection</b>	Yes
<b>Short-circuit protection</b>	Yes
<b>Mains buffering</b>	
• Mains/voltage failure stored energy time	10 ms; PN side
<b>Input current</b>	
<b>Current consumption (rated value)</b>	0.09 A
<b>Current consumption, max.</b>	0.11 A
<b>Power loss</b>	
<b>Power loss, typ.</b>	2.2 W
<b>Interfaces</b>	
<b>Interfaces/bus type</b>	2x Ethernet (RJ45), 1x Sub-D (9-pin)
<b>Supports protocol for PROFINET IO</b>	
• automatic detection of transmission rate	No
• Transmission rate, max.	100 Mbit/s
• Number of RJ45 ports	2
• Number of FC (FastConnect) connections	2
<b>PROFINET functions</b>	
• Assignment of the IP address, supported	Yes
• Assignment of the device name, supported	Yes
<b>1. Interface</b>	
<b>Interface type</b>	J1939 according to the standard "SAE J1939"
<b>Isolated</b>	Yes; 500 V AC or 707 V DC
<b>Interface types</b>	
• Number of ports	1
• Design of the connection	9-pin sub D socket
<b>CAN</b>	
• CAN operating modes	J1939 according to the standard "SAE J1939"
• Transmission rate, min.	100 kbit/s
• Transmission rate, max.	500 kbit/s
• Number of slaves, max.	30
<b>J1939</b>	
• Addressable ECUs, max.	30
• Logical nodes, max.	253
• PDU 1	Yes
• PDU 2	Yes
• DM data	Yes
• BAM	Yes
• CMTD	Yes
<b>2. Interface</b>	
<b>Interface type</b>	PROFINET
<b>Isolated</b>	Yes; 1 500 V AC or 2 250 V DC
<b>Interface types</b>	
• RJ 45 (Ethernet)	Yes
• Number of ports	2
• integrated switch	Yes
<b>Protocols</b>	
• PROFINET IO Device	Yes

Article number	<b>6AG2623-0AA00-4AA0</b> SIPLUS PN/J1939 LINK TX RAIL
<b>Interrupts/diagnostics/status information</b>	
<b>Status indicator</b>	Yes
<b>Alarms</b>	Yes
<b>Diagnostics function</b>	Yes
<b>Diagnostics indication LED</b>	
• RUN LED	Yes
• ERROR LED	Yes
• MAINT LED	Yes
• LINK LED	Yes
• RX/TX LED	Yes
<b>Potential separation</b>	
<b>Potential separation exists</b>	Yes
<b>Degree and class of protection</b>	
<b>IP degree of protection</b>	IP20
<b>Standards, approvals, certificates</b>	
<b>Railway application</b>	
• EN 50121-3-2	Yes; EMC for rail vehicles
• EN 50121-4	Yes; EMC for signal and telecommunications systems
• EN 50124-1	Yes; Railway applications - overvoltage category OV2; pollution degree PD2; rated surge voltage UNi = 0.5 kV; UNm = 24 V DC
• EN 50125-1	Yes; Rail vehicles - see ambient conditions
• EN 50125-2	Yes; Stationary electrical equipment - see ambient conditions
• EN 50125-3	Yes; Signal and telecommunications systems - see ambient conditions; vibrations and shocks: Application point outside of tracks (1 m to 3 m away from track)
• EN 50155	Yes; Rail vehicles - temperature class OT4, ST1/ST2, horizontal mounting position
• EN 61373	Yes; Rail vehicles - vibrations and shocks: Category 1 Class A/B
• Fire protection acc. to EN 45545-2	Yes; For proof of conformity, see Service & Support
<b>Ambient conditions</b>	
<b>Ambient temperature during operation</b>	
• horizontal installation, min.	-40 °C; = Tmin (incl. condensation/frost)
• horizontal installation, max.	70 °C; = Tmax; +85 °C for 10 min (OT4, ST1/ST2 acc. to EN 50155)
• vertical installation, min.	-40 °C; = Tmin
• vertical installation, max.	55 °C; = Tmax
• ceiling installation, min.	-40 °C; = Tmin
• ceiling installation, max.	45 °C; = Tmax
• floor installation, min.	-40 °C; = Tmin
• floor installation, max.	45 °C; = Tmax
<b>Ambient temperature during storage/transportation</b>	
• min.	-40 °C
• max.	85 °C
<b>Altitude during operation relating to sea level</b>	
• Installation altitude above sea level, max.	2 000 m
• Ambient air temperature-barometric pressure-altitude	Tmin ... Tmax at 1 140 hPa ... 795 hPa (-1 000 m ... +2 000 m)
<b>Relative humidity</b>	
• With condensation, tested in accordance with IEC 60068-2-38, max.	100 %; RH incl. condensation / frost (no commissioning in bedewed state), horizontal installation
<b>Resistance</b>	
• Coolants and lubricants	
- Resistant to commercially available coolants and lubricants	Yes; Incl. diesel and oil droplets in the air
• Use in stationary industrial systems	
- to biologically active substances according to EN 60721-3-3	Yes; Class 3B2 mold, fungus and dry rot spores (with the exception of fauna); Class 3B3 on request
- to chemically active substances according to EN 60721-3-3	Yes; Class 3C4 (RH < 75 %) incl. salt spray acc. to EN 60068-2-52 (severity degree 3); *
- to mechanically active substances according to EN 60721-3-3	Yes; Class 3S4 incl. sand, dust, *
• Use on land craft, rail vehicles and special-purpose vehicles	
- to biologically active substances according to EN 60721-3-5	Yes; Class 5B2 mold, fungus and dry rot spores (with the exception of fauna); Class 5B3 on request
- to chemically active substances according to EN 60721-3-5	Yes; Class 5C3 (RH < 75 %) incl. salt spray acc. to EN 60068-2-52 (severity degree 3); *
- to mechanically active substances according to EN 60721-3-5	Yes; Class 5S3 incl. sand, dust; *
• Usage in industrial process technology	
- Against chemically active substances acc. to EN 60654-4	Yes; Class 3 (excluding trichlorethylene)
- Environmental conditions for process, measuring and control systems acc. to ANSI/ISA-71.04	Yes; Level GX group A/B (excluding trichlorethylene; harmful gas concentrations up to the limits of EN 60721-3-3 class 3C4 permissible); level LC3 (salt spray) and level LB3 (oil)
• Remark	
- Note regarding classification of environmental conditions acc. to EN 60721, EN 60654-4 and ANSI/ISA-71.04	* The supplied plug covers must remain in place over the unused interfaces during operation!
<b>Conformal coating</b>	
• Coatings for printed circuit board assemblies acc. to EN 61086	Yes; Class 2 for high reliability
• Protection against fouling acc. to EN 60664-3	Yes; Type 1 protection
• Electronic equipment on rolling stock acc. to EN 50155	Yes; Class PC2 protective coating acc. to EN 50155:2017
• Military testing according to MIL-I-46058C, Amendment 7	Yes; Discoloration of coating possible during service life
• Qualification and Performance of Electrical Insulating Compound for Printed Board Assemblies according to IPC-CC-830A	Yes; Conformal coating, Class A

**Selection and ordering data**

Version	Article No.
<b>SIPLUS PN/J1939 LINK TX RAIL</b> Approved in accordance with EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic Network transition from PROFINET to J1939 networks; IP20 Ambient temperature -40 ... +70 °C (+85 °C for 10 min.)	<b>6AG2623-0AA00-4AA0</b>

## Overview

- Basic Panel 3.6 inches for operating and monitoring compact machines and systems
- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- Clear process representation through the use of full-graphic displays
- Intuitive operation via touch and tactile function keys
- Equipped with all the necessary basic functions such as reporting, recipe management, curve representation, vector graphics, and language selection
- Easy connection to the controller via integrated Ethernet interface

## Benefits

- An integral component of Totally Integrated Automation (TIA): Increased productivity, minimum engineering overhead, reduction in life-cycle costs
  - Short configuring and commissioning times
  - Service-friendly thanks to maintenance-free design and long service life of the backlighting display
- Simple and user-friendly representation of process values thanks to, for example, input/output fields, vector graphics, trend curves, bar charts, text and bitmaps
- Graphics library available with off-the-shelf picture objects
- Can be used worldwide:
  - 32 languages can be configured (incl. Asian and Cyrillic character sets)
  - You can switch between up to 5 languages online
  - Language-dependent texts and graphics

## Application

The SIMATIC HMI Basic Panels can be used wherever compact machines and plants are controlled and monitored locally.

## Design

The SIMATIC HMI Basic Panels are installation-compatible with the existing touch devices of the product family of Panels and Multi Panels.

### KP300 Basic mono PN

- 3.6" FSTN pixel graphics, monochrome
- 1 Ethernet interface (TCP/IP, PROFINET)
- Touch device with 10 function keys and 10 system keys
- Innovative successor to the Text Displays (TD 100C, TD 200/TD 200C, TD 400C) as well as the OP 73 and OP 73micro

## Function

- Input/output fields for displaying and modifying process parameters
- Buttons are used for direct triggering of functions and actions. Up to 16 functions can be configured simultaneously on buttons.
- Graphics can be used as icons instead of text to "label" function keys or buttons. They can also be used as full-screen background images. The configuration tool contains a library with extensive graphics and diverse objects. All editors with an OLE interface (such as PaintShop, Designer or CorelDraw) can be used as graphics editors
- Vector graphics Simple geometric basic forms (line, circle and rectangle) can be created direct in the configuring tool
- Predefined texts for labeling function keys, process pictures and process values in different font sizes
- Curve functions and bars are used for graphical display of dynamic values
- Language switching:
  - 5 online languages, 32 configuration languages incl. Asian and Cyrillic character sets
  - Language-dependent texts and graphics
- User administration (security) in accordance with the requirements of the different industries
  - Authentication with user ID and password
  - User-group-specific rights
- Alarm logging system
  - Discrete messages
  - Analog messages
  - Freely-definable message classes (e.g. status/fault messages) for definition of acknowledgment response and display of message events
  - Message history
- Recipe management
- Help texts for process screens, messages and variables
- Arithmetic functions
- Limit value monitoring for reliable process control of inputs and outputs
- Indicator light for indicating machine and plant statuses
- Scheduler for global function execution in case of global events
- Template concept for creation of screen templates (screen elements configured in the template appear in every screen)
- Simple maintenance and configuration thanks to
  - Backup/restore of configuration, operating system and firmware on/from a PC using ProSave
  - Configuration download via MPI/PROFIBUS DP or PROF-INET
  - Automatic transfer detection
  - Individual contrast or brightness setting (except 6" color) and calibration
  - Clean screen
  - No battery required

## Configuration

The configuration is implemented using the engineering software SIMATIC WinCC Basic, Comfort, Professional or SIMATIC STEP 7 Basic (with integrated WinCC Basic).

## SIPLUS RAIL

SIPLUS extreme RAIL operator control and monitoring devices

### SIPLUS extreme RAIL Basic Panels (1st Generation)

#### Integration

The Basic Panels can be connected to:

- SIMATIC S7 controllers
- Non-Siemens controllers (applies for DP devices)
  - Allen Bradley DF1
  - Modicon Modbus RTU
  - Mitsubishi FX
  - Omron Hostlink/Multilink
- Non-Siemens controllers (non-Siemens drivers for PN devices)
  - Allen Bradley Ethernet/IP
  - Modicon Modbus TCP/IP
  - Mitsubishi MC TCP/IP

**Note:**

For further information, see "System interfaces".

#### Technical specifications

Note

Do you require a specific modification or extension to the products described here? Then look up "Customized products", where you will find information about additional and generally available sector-specific products as well as options for customer-specific modifications and adaptations.

## SIPLUS RAIL

### SIPLUS extreme RAIL operator control and monitoring devices

#### SIPLUS HMI Comfort Panels Outdoor RAIL

##### Overview

##### **SIPLUS HMI Comfort Panels Outdoor RAIL**

Special HMI Panels have been developed which are designed to withstand outdoor environments.

It's not only extreme temperatures which call for robust hardware. Direct sunlight, too, must not be allowed to impair display readability and the panel front must be protected from UV radiation. The specially-bonded Outdoor fronts and the rugged hardware of the Outdoor Panels make the SIMATIC HMI Comfort Panels Outdoor a reliable partner in this environment.

- Approved in accordance with the railway standards EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 for use in rail traffic
- For outdoor operation without additional measures
- 7" and 15" daylight-readable display, widescreen
- Automatic, central or manual dimming of the backlight, with integrated sensor
- Panel front 100% UV protected
- Front resistant to salt mist
- Front IP66 and Nema4 x (indoor/outdoor)
- Extended operating temperature range: from -30 °C to +60 °C at 3 000 m installation altitude
- TIA Portal central engineering tool (WinCC V13 SP1&HSP or higher)
- Comfort Panel functionality and performance

##### Notice:

The 7" Comfort Panel corresponds to a 7" Comfort Panel Standard, the 15" Comfort Panel Outdoor corresponds to a 12" Comfort Panel Standard in respect of performance, functionality and quantity structure.

##### Benefits

- No additional expense or measures in the outdoor area for:
  - Climatic adaptations
  - UV protection
  - Glare protection
  - Automatic dimming
- Integral component of Totally Integrated Automation (TIA): Increased productivity, minimum engineering overhead, reduction in life-cycle costs.
- Can also be deployed in an upright position in a laterally limited installation space (all touch devices).
- Seamless compatibility across the Comfort Panel range for existing projects from Standard to Outdoor. This means that TP700 Comfort Standard and TP1200 Comfort Standard projects can be used without issue on TP700 Comfort Outdoor and/or TP1500 Comfort Outdoor Panels. The TP1500 Comfort Outdoor Panel displays the configuration of the TP1200 Comfort Standard proportionately larger.
- Projects can be created with a Standard Panel, and subsequently also used on an Outdoor Panel (device switchover).

##### Application

The Outdoor Panels can be operated in outdoor environments without the need for additional measures. Additional heating or cooling units are not required. The daylight-readable display is optically bonded to the unit and is glare-free thanks to special polarizing films. So the screen contents are highly legible even in daylight.

The Panel is just at home in the marine sector as it is offshore. Drilling platforms, ships, special vehicles or other, awkwardly located fields of application can now be easily accessed.

##### Design

- The mechanical design of the SIMATIC HMI Comfort Outdoor Panels differentiates them from other units in that they have an extremely rugged appearance.
- The front is made from milled, powder-coated aluminum.
- Special powder coating protects the front against ultraviolet radiation and salt mist.
- The GFG Touch (glass-foil-glass) is bonded to the display to form a single optical unit. This ensures that no moisture can get between the two layers to cause fogging and also prevents reflective phenomena to the largest possible extent.
- This high-quality bonding enables energy-saving backlight to be used, in contrast to very bright, energy-intensive backlit displays which achieve the same effects.
- The dimension drawings can be found in the manual available as a free download in the SIMATIC Support area. Online 3D CAD drawings are also available.
- An integrated PN switch provides two PN interfaces for operation in ring or line topologies. This enables hardware configurations that do not require additional network components.
- For applications where there are aggressive substances in the atmosphere, the electrical components can have customized hardening (see also SIPLUS variants).

##### Function

The functionality is identical to that of the corresponding Standard Panel - a TP700 Comfort Standard is the equivalent of TP700 Comfort Outdoor, just as a TP1200 Comfort Standard is the equivalent of a TP1500 Comfort Outdoor. The sole distinguishing feature is their size.

The complete functionality and all the details of the devices are thoroughly described in their corresponding manuals. A comprehensive online help resource is also available for direct support in the TIA Portal.

##### Integration

SIMATIC HMI Comfort Outdoor Panels can be connected to:

- SIMATIC S7 controllers
- Third-party controllers
  - Allen Bradley DF1, Allen Bradley Ethernet/IP
  - Modicon MODBUS RTU, Modicon MODBUS TCP/IP
  - Mitsubishi FX, Mitsubishi MC TCP/IP
  - Omron Hostlink/Multilink
- OPC UA client or OPC DA server
- Multi-protocol capability
- http communication with other SIMATIC HMI systems
- Over Ethernet (TCP/IP) to a higher-level PC, network printer

##### Note:

Further information can be found under "System interfaces".

### More information

#### Note:

The SIPLUS HMI TP700 Comfort Panel Outdoor RAIL is compatible with the TP700 Comfort Panel Standard.

The SIPLUS HMI TP1500 Comfort Panel Outdoor RAIL is compatible with the TP1200 Comfort Panel Standard with a 15" display.

A TP1500 Comfort Standard unit with the maximum possible configuration cannot be installed on a SIPLUS HMI TP1500 Comfort Panel Outdoor.

**Overview**

SIPLUS IPC227E ET RAIL (Nanobox PC): The Box PC with optimized performance in compact design – maintenance-free and rugged

The Nanobox PC is an extremely compact and flexible embedded industrial PC.

Thanks to its closed, dust-protected all-metal enclosure, the IPC227E offers maximum industrial functionality for flexible use under harsh conditions – while remaining maintenance-free.

Modern interfaces and the option for expansion via a PCIe slot mean this box PC can be easily integrated into the automation system. In the version with pre-installed Industrial Edge Runtime, it also supports modern Edge architectures. The latest Intel Quad Core processors ensure excellent performance here in an ultra-compact design.

**Benefits**Low space requirements and installation flexibility

- Maximum compactness with approx. 1 liter enclosure volume or more with integrated industrial power supply for minimum space requirements in the control cabinet
- Excellent flexibility thanks to three installation variants and interfaces on one side suitable for any installation situation

High degree of ruggedness for maintenance-free continuous operation

- Maximum industrial functionality thanks to closed enclosure for optimum dust protection and high electromagnetic compatibility
- Backup of important system data thanks to non-volatile retentive memory (NVRAM, optional)
- Designed for continuous operation at ambient temperatures up to 60 °C and high vibration/shock requirements
- Maintenance-free operation – without fans (operation without battery possible)

Optimized for use as gateway and for control and visualization tasks

- High-performance and energy-saving Quad Core Intel processors
- Diverse interfaces and configuration options (USB 3.0, 2 x Gbit Ethernet, RS232/RS485/RS422, SSD/CFast/HDD)
- Optimized for headless operation with LEDs for efficient self-diagnostics

High level of investment security for reducing engineering costs

- Long-term availability: Service & support period up to 11 years
- Ideal platform for SIMATIC Software Controller and/or WinCC RT Advanced / WinCC Unified PC RT
- Simple integration into automation solutions with the TIA Portal and on-board PROFINET interfaces

Extended temperature range

The SIPLUS IPC227E ET RAIL is also available for the extended temperature range from -25 °C to +60 °C.

The following options for this are available and must always be selected together when configuring the device:

- Celeron E3845 ET (4C/4T) / TPM
- 4 GB RAM ET / NVRAM
- 60 GB SSD ET

**Application**

The Nanobox PC has a diverse range of applications:

- Control, visualization and communication tasks in areas like mechanical engineering, transportation systems or power transmission
- Acquisition, further processing and visualization of data
- Machine-level applications that additionally require C/C++ programs
- Applications such as shipbuilding, building automation, and storage & logistics
- For Industrial Edge applications for simple, scalable and reliable use of software for data processing (with pre-installed Industrial Edge Runtime):
  - Collection, analysis, saving and forwarding of production data
  - Installation and scaling of software using container technology
  - Central management of devices and software on location or in the cloud
  - Full data control from the shop floor to the cloud

**Design****Basic design**

- All-metal enclosure, resistant to vibrations and shocks, also with high electromagnetic compatibility
- Isolated power supply:
  - 24 V DC (19.2 to 28.8 V)
- Graphics connection DisplayPort
  - Resolution: Up to 2 560 x 1 600 pixels
- Interfaces (accessible from one side):
  - 2 x LAN 10/100/1000 Mbps Ethernet interface (RJ45)
  - 1 x USB V3.0, 3 x USB V2.0
- Fieldbus
  - PROFINET Realtime via Standard Ethernet interface

SIPLUS IPC227E ET RAIL with extended temperature range

The following options are available for this version and must always be selected together when configuring the device:

- Celeron E3845 ET (4C/4T) / TPM
- 4 GB RAM ET / NVRAM
- 60 GB SSD ET

**SIPLUS RAIL**

<b>SIPLUS IPC227E ET RAIL (Box PC)</b> Approved in accordance with the EN 50155, EN 15121, EN 50124, EN 50125 and EN 45545 railway standards for use in rail traffic with conformal coating, -25...+60 °C, OT1 with ST1/2 (+70 °C for 10 min.), 1x display port; 2x 10/100/1000 Mbps Ethernet RJ45; 1x USB3.0, 3x USB2.0; CFast slot; 24 V DC industrial power supply Celeron E3845 ET (4C/4T) with TPM (not for China); 4 GB ET with NVRAM; box: Basis with COM 1/2; Windows 10 IoT Enterprise LTSB 2016, 64 bit, MUI (en, de, fr, it, es) 60 GB SSD ET, not replaceable	<b>6AG2647-8BE72-1HA1</b>

**Overview**

The design and functionality of the SIPLUS PS 305 and PS 307 1-phase load power supplies (system and load current supply) with automatic range switchover of the input voltage are an optimal match for the SIMATIC S7-300 in design and functionality. By means of the connecting comb that is supplied with the system and load current supply, the supply to the CPU is quickly established. It is also possible to provide a 24 V supply to other S7-300 system components, input/output circuits of the input/output modules and, if necessary, the sensors and actuators. Comprehensive certifications, such as UL, ATEX or GL facilitate universal use (does not apply to outdoor use).

**Note**

SIPLUS extreme products are based on Siemens standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

**SIPLUS PS 305, PS 307**

Ambient temperature range	-25 ... +70 °C		
Conformal coating	Coating of the printed circuit boards and the electronic components		
Technical specifications	The technical specifications of the standard product apply, except for the ambient conditions.		
<b>Ambient conditions</b>			
Extended range of environmental conditions • with reference to ambient temperature, air pressure and altitude	Tmin ... Tmax at 1080 hPa ... 795 hPa (-1000 m ... +2000 m) // Tmin ... (Tmax - 10K) at 795 hPa ... 658 hPa (+2000 m ... +3500 m) // Tmin ... (Tmax - 20K) at 658 hPa ... 540 hPa (+3500 m ... +5000 m)		
Relative humidity • with condensation, max.	100 %; RH incl. bedewing/frost (no commissioning in bedewed state)		
Resistance • to biologically active substances/compliance with EN 60721-3-3 • to chemically active substances/compliance with EN 60721-3-3 • to mechanically active substances, compliance with EN 60721-3-3	Yes; Class 3B2 mold and fungal spores (except fauna); the supplied plug covers must remain in place on the unused interfaces during operation. Yes; Class 3C4 (RH < 75%) incl. salt spray in accordance with EN 60068-2-52 (severity 3); the supplied plug covers must remain in place on the unused interfaces during operation. Yes; Class 3S4 incl. sand, dust; the supplied plug covers must remain in place on unused interfaces during operation.		

**Design**

- The system and load current supplies are screwed directly onto the S7-300 DIN rail and can be mounted directly to the left of the CPU (no installation clearance required)
- Diagnostics LED for indicating "Output voltage 24 V DC OK"
- ON/OFF switches (operation/stand-by) for possible swapping of modules
- Strain-relief assembly for input voltage connection cable

**Function**

- Connection to all 1-phase 50/60 Hz networks (120 / 230 V AC) through automatic range switching (PS307) or manual switching (PS307, outdoor)
- Short-term power failure backup
- Output voltage 24 V DC, stabilized, short circuit-proof, open circuit-proof
- Parallel connection of two power supplies for enhanced performance

## SIDOOR

SIDOOR automatic door controls  
for railway applications

Controller > Platform screen door / gate drive

### Overview

SIDOOR ATE530S coated/531S wiring diagram

The SIDOOR ATE53xS door controller is an “intelligent” door drive which can be used for safety-oriented operation of platform screen doors and gates (PSDs & PSGs), according to individual requirements.

Siemens has once again shown just how easy integration can be with the innovative SIDOOR ATE53xS platform screen door drive in conjunction with SIDOOR MED280 or MEG251 motors. The PROFINET module integrated in the SIDOOR ATE53xS enables standardized, certified connection to PROFINET IO systems.

- Use of standard automation components
- Full integration into TIA Portal and STEP 7 thanks to PROFINET connection
- Parameter assignment and monitoring of door control parameters via the PROFINET interface (function blocks available as example applications in SIOS).

- Application example: Synchronization of two-panel and independent platform screen doors with SIDOOR ATE530S PROFINET EC door drive and S7-1500 CPU via TIA Portal  
<https://support.industry.siemens.com/cs/de/en/view/109480495>
- Application example: Safety-oriented automation of platform screen doors with SIDOOR ATE530S PROFINET EC door drive and S7-1500 CPU via TIA Portal  
<https://support.industry.siemens.com/cs/de/en/view/109477186>
- Read-in of two safe signals (two-channel, antivalent)
- High level of system safety thanks to safe torque off (e.g. self-release in the event of a fault)
- Firmware update for all SIDOOR controllers on an entire platform possible centrally via TCP/IP
- SIL 2 according to IEC 62061

## Overview

The SIDOOR ATE530G drive control is designed for controlling gap fillers between external train doors and the platform edge. The gap filler facilitates easy access for passengers. The innovative SIDOOR ATE530G drive solution enables operation of a gap filler with adjustable speed, acceleration and motor currents. Depending on the application, a project-specific motor is used. In this case the firmware of the controller might be adapted to the specific project.

The SIDOOR ATE530G is activated by digital signals from a higher-level door control, and reports information about its current state via digital signals back to the door control.

The following drive functions are supported:

- System start-up after power failure
- "Extend", "Retract" command
- Gap filler is moved by a travel curve profile
- Obstruction detection
- Ice-breaker function  
Icing can be shifted broken by repeated extension and retraction of the gap filler with increased force.
- Reversing at the platform edge

The SIDOOR ATE530G control unit fulfills Basic Integrity in accordance with EN 50657:2017

**Overview**

SIDOOR ATD400T interior railway door drive

The SIDOOR ATD400T interior railway door drive is an "intelligent" door drive which enables gangway doors to be opened and closed at adjustable speeds and accelerations.

- Relay module design
- For dynamic door weights up to 180 kg
- Automatic door weight detection
- Operating temperature -20 to +70 °C <sup>1)</sup>
- Flexible motor management (two different motor types), automatic detection
- Opening width 0.25 to 4 m
- Door can be operated with and without closing springs (60 to 80 N)
- With two identical door leaves, can be used up to a train inclination of 0 to 10%
- Forces and energies are limited in accordance with EN 14752
- EMC according to EN 50121-3-2
- Fulfills HL3 according to fire protection standard EN 45545-2 (Railway applications – Fire protection on rail vehicles)
- Vandal-proof

**Note:**

- Maximum output current at 24 V DC:
  - 0.4 A at ≤ 55 °C ambient temperature during operation
  - 0.1 A from 55 °C to 70 °C ambient temperature during operation, with restrictions at operating temperatures > 55 °C
- Maximum ambient temperature during operation:
  - 55 °C
  - 70 °C with restrictions at operating temperatures > 55 °C
- Restrictions at operating temperatures > 55 °C:
  - Use the 24 V output voltage only for operating the control inputs (max. 0.1 A)
  - Use a sufficiently large (at least 350 x 350 mm), unpainted, metal mounting plate
  - The maximum drive parameters are restricted to the default values
  - If temperature class T3 according to EN 50155 is used, the maximum air temperature of 85 °C must not be exceeded near the printed-circuit board

**Overview****SIDOOR Software Kit**

SIDOOR Software Kit

The scope of delivery of the SIDOOR Software Kit includes an installation CD

which includes the following functionalities:

SIDOOR User Software	The component that enables the door control system to be configured, parameters to be assigned, and analyzed.
Siemens HCS12 Firmware Loader	This component is used to update the operating software of the door controller.
SIDOOR USB to UART Bridge Driver	This driver is essential for operation of the USB adapter.

**Note:**

Some firmware updates are offered as free downloads in the Siemens Industry Online Support (SIOS Service & Support Portal). For information on the availability and acquisition of more firmware, please contact Technical Support.

## Overview

SIDOOR motors are speed controlled, taking set force and speed limits into account. The gear outlet direction is defined as left or right when viewing the gear unit from the front. Force transmission is via a toothed belt. The toothed belt passes over a deflector pulley and can be fitted with two door clutch holders. This enables it to drive both single-side and centrally opening doors.

SIDOOR geared motors are available in two technological versions.

- 1. DC technology in version  
(area of application: interior railway doors)
  - DC geared motor  
SIDOOR geared motors are a combination of gear unit, motor, and encoder. They are easy to connect to the controller via the interface provided and are automatically detected during commissioning. The variable speed drive unit comprises a speed-controlled DC motor with non-self-locking gearing.
- 2. EC technology in version  
(area of application: platform screen doors)
  - EC direct drive  
SIDOOR direct drives are a combination of motor and sensor. They are easy to connect to the controller via the interface provided and are automatically detected during commissioning. The maintenance-free drive unit consists of a gearless, speed-controlled, electronically commutated motor. The EC direct drive can be fitted in various mounting orientations, facilitating reduced inventory management and minimizing assets.
  - EC geared motors  
EC geared motors are electronically commutated DC motors with non-self-locking gearing and are speed-controlled. They are easy to connect to the controller via the interface provided and are automatically detected during commissioning. Due to the brushless drive technology, EC geared motors are subject to less abrasion compared with DC geared motors and thus have a longer service life. On account of the brushless drive technology, no commutation noises come from this motor, so it generates less noise than the DC geared motors.

### Motors for interior railway door drives (for controllers ATD400T)

The following DC geared motors **are available for interior railway door drives**. They should be selected according to the dynamic door weight.

- SIDOOR MDG180 geared motors, compliance with fire protection standard EN 45545-2 (max. door weight 180 kg)
  - SIDOOR MDG180 L EN 45545-2 (pinion left) 6FB1103-0AT16-4MB0
  - SIDOOR MDG180 R EN 45545-2 (pinion right) 6FB1103-0AT15-4MB0
- SIDOOR M3 geared motors (max. door weight 180 kg)
  - SIDOOR M3 L (pinion left) 6FB1103-0AT10-4MB0
  - SIDOOR M3 R (pinion right) 6FB1103-0AT11-4MB0

## Overview

### SIDoor MED280 direct drive

SIDoor direct drives are a combination of motor and sensor. They are easy to connect to the controller via the interface provided and are automatically detected during commissioning.

The maintenance-free drive unit consists of a gearless, speed-controlled, electronically commutated motor with non-self-locking gearing.

Direct drives are designed for certain maximum dynamic door weights and can control both drive directions.

- SIDoor MED280 direct drive for dynamic door weights up to 280 kg (6FB1203-0AT12-7DA0)

## SIDOOR

### SIDOOR automatic door controls for railway applications

#### Accessories

##### Overview

A comprehensive range of accessories is available for the SIDOOR systems. This is necessary to ensure low-noise operation of the door by the controller.

##### **Accessories for SIDOOR DC and EC geared motors**

###### Rubber-metal anti-vibration mount

To ensure low-noise door operation, the SIDOOR geared motors are integrated in the door system using rubber-metal anti-vibration mounts.

- Rubber-metal anti-vibration mount 6FB1104-0AT02-0AD0 for SIDOOR M3 and SIDOOR MDG180 DC geared motors (also for EN 45545-2) and SIDOOR MEG251 EC geared motors (door weights up to 250 kg)

Rubber-metal anti-vibration mount 6FB1104-0AT02-0AD0

###### Mounting bracket

Two different mounting brackets are available with elongated holes:

- Mounting bracket 6FB1104-0AT01-0AS0 for SIDOOR M3 and SIDOOR MDG180 DC geared motors (also for EN 45545-2) and SIDOOR MEG251 EC geared motors for flexible accommodation of the rubber-bonded metal.
- Mounting bracket 6FB1104-0AT02-0AS0 for the deflector unit, this enables the toothed belt to be set to the required belt tension.

Mounting bracket 6FB1104-0AT01-0AS0 for mounting the geared motor

Mounting bracket 6FB1104-0AT02-0AS0 for the deflector unit

###### Door clutch holder

The door clutch holder 6FB1104-0AT01-0CP0 serves to connect the respective door leaf by means of a toothed belt while also functioning as a toothed-belt lock. One door clutch holder per door leaf is required. The toothed-belt lock can accommodate both open ends of the toothed belt.

Door clutch holder 6FB1104-0AT01-0CP0 (packaging size = 1 unit)

###### Deflector unit

The deflector unit 6FB1104-0AT03-0AS0 contains an embedded belt pulley which can be mounted on the door system.

The STS toothed belt is redirected via this deflector unit.

Deflector unit 6FB1104-0AT03-0AS0

###### **STS toothed belt**

The door system is moved between the end positions of the door using the STS toothed belt 6FB1104-0AT0.-0AB0. Two different toothed belt lengths are available.

Toothed belt 6FB1104-0AT01-0AB0, length 4 m

Toothed belt 6FB1104-0AT02-0AB0, length 45 m

### Accessories for the SIDOOR MED280 EC direct drive, for the controller for the SIDOOR ATE530S coated/ATE531S platform screen door drive

#### Motor holder

- Motor holder 6FB1104-0AT03-0AD0 for accommodation of the SIDOOR MED280 direct drive.

SIDOOR motor holder

#### Mounting bracket

- For mounting the SIDOOR motor holder 6FB1104-0AT01-0AS0  
Identical to the mounting bracket 6FB1104-0AT01-0AS0 for DC geared motors.

Mounting bracket for geared motor

- With tensioning device for mounting the deflector unit and setting the toothed belt to the required tension (large) 6FB1104-0AT05-0AS4

SIDOOR mounting bracket, large

- With tensioning device for mounting the deflector unit and setting the toothed belt to the required tension (small) 6FB1104-0AT05-0AS5

SIDOOR mounting bracket, small

#### Door clutch holder

- For attaching both ends of the toothed belt and connecting the respective door panel to the toothed belt, width 20 mm, 6FB1104-0AT05-0AS1

SIDOOR door clutch holder

#### Deflector unit

- For attaching the SIDOOR toothed belt and fixing to the door 6FB1104-0AT07-0AS0

SIDOOR deflector unit

#### STD toothed belt

- As a connection between the door system and the end positions of the door, toothed belt width 20 mm. Length 4 m, 6FB1104-0AT05-0AB0

SIDOOR toothed belt, small

- Toothed belt width 20 mm. Length 45 m 6FB1104-0AT06-0AB1

SIDOOR toothed belt, large

## Network Components

### SCALANCE X – Industrial Ethernet Switches

#### SCALANCE X005EEC

##### Overview

The unmanaged Industrial Ethernet switch SCALANCE X005 is ideally suited for economical setup of small Industrial Ethernet networks with data transfer rates of 10/100 Mbps in line and star structures.

- Five electrical station or network connections
- Rugged metal housing for space-saving control cabinet installation on a standard mounting rail or S7-300 mounting rail or for wall mounting
- Rugged, industry-compatible station connections with RJ45 plug connectors that are locked into place on the housing to provide additional strain relief and bending relief
- Diagnostics on the device by means of LEDs (power, link status, data communication)

##### SCALANCE X005EEC

- For setting up electrical star and line structures with five electrical ports for use in rail and road transport with extended temperature range

##### Benefits

- Ideal solution for setup of small Industrial Ethernet line and star structures
- Space-saving installation in the control cabinet thanks to its compact size in S7-300 format
- Reliable plug-in connection thanks to rugged, industry-compatible device connection in combination with FastConnect connectors
- Installation without patch field is possible using IE FC RJ45 plug 180 and IE FC standard cable
- Integrated autocrossover function enables use of uncrossed connection cables

##### Application

- For economical setup of small, electrical Industrial Ethernet star and line structures with switching functionality, e.g. machine or plant islands
- For use in the control cabinet
- The SCALANCE X005EEC is suitable for use in rail and road transport due to its specification according to EN 50155 and e1/E1

##### Design

The SCALANCE Industrial Ethernet switches with a rugged metal housing (IP30) are optimized for mounting on a standard mounting rail and an S7-300 mounting rail. Direct wall mounting in different mounting positions is also possible. Due to the housing dimensions, which correspond to those of the SIMATIC S7-300, the devices are very well suited for integration into an automation solution with S7-300 components.

The SCALANCE X005 switch is equipped with:

- Supply voltage 1 x 24 V DC
- A row of LEDs for displaying status information (power, link status, data communication)
- 5 x 10/100BaseTX, RJ45 ports: automatic detection of the data rate (10 or 100 Mbps), with autosensing and autocrossover function for connecting IE FC cables via IE FC RJ45 Plug 180 up to 100 m

#### More information

##### Selection tools:

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular variants, the TIA Selection Tool is available at:

TIA Selection Tool:

<http://www.siemens.com/tia-selection-tool>

#### Overview

The managed Industrial Ethernet switches of the SCALANCE XC-200 product line are optimized for setting up Industrial Ethernet networks with data transfer rates of 10/100/1000 Mbit/s as well as 2 x 10 Gbps (e.g. SCALANCE XC206-2G PoE).

- Electrical or optical connection to stations or networks according to port characteristics of the devices
- Versions with transmission rates up to 10 Gbps optical or 1 Gbps electrical
- Rugged station connections with industry-standard RJ45 connectors that offer additional strain and bending strain relief thanks to latching on the enclosure
- Redundant power supply
- Console port for direct access to device
- Display of comprehensive operating mode and status information via LEDs and selection pushbuttons
- Signaling contact for connecting to an error signaling system
- Slot for optional C-PLUG removable data storage medium for easy device replacement without additional equipment such as a field PG
- Grounding screw for external ground connection
- Virtual LANs (VLAN) for easy structuring of large networks into smaller, logical subnetworks. Reasons for the subdivision into logical subnetworks are, for example, separation of the Ethernet networks to reduce the broadcast load, separation of sensitive areas from the main network, and subdivision of the network into logical working groups
- By learning the multicast sources and destinations (Internet Group Management Protocol (IGMP) Snooping), SCALANCE XC-200 switches can also filter multicast data traffic and thus limit the load on the network
- Integrated security functions offer protection against unauthorized network access and configuration (e.g. authentication via IEEE 802.1X)

#### Product versions

- Switches with electrical ports:
  - SCALANCE XC208G with 8x RJ45 ports 10/100/1000 Mbit/s
  - SCALANCE XC208; with 8x RJ45 ports 10/100 Mbps for mounting in the control cabinet
  - SCALANCE XC216 with 16x RJ45 ports 10/100 Mbps for mounting in the control cabinet
  - SCALANCE XC224; with 24x RJ45 ports 10/100 Mbps for mounting in the control cabinet
- Switches with Power over Ethernet:
  - SCALANCE XC206-2G PoE with 6x RJ45 PoE ports 10/100/1000 Mbps and 2x SFP+ 1000/10000 Mbps
  - SCALANCE XC206-2G PoE (DC 54 V) with 6x RJ45 PoE ports 10/100/1000 Mbps and 2x SFP+ 1000/10000 Mbps, PoE support for 54 V DC Infeed
  - SCALANCE XC206-2G PoE EEC with 6x RJ45 PoE ports 10/100/1000 Mbps and 2x SFP+ 1000/10000 Mbps, PoE support for 54 V DC Infeed
  - SCALANCE XC208G PoE with 6x RJ45 PoE ports 10/100/1000 Mbps and 2x RJ45 ports 10/100/1000 Mbps
  - SCALANCE XC208G PoE (DC 54 V) with 6x RJ45 PoE ports 10/100/1000 Mbps and 2x RJ45 ports 10/100/1000 Mbps, PoE support for 54 V DC Infeed
- Switches with electrical and optical ports
  - SCALANCE XC206-2; with 6x RJ45 ports 10/100 Mbps and 2x ST/BFOC ports 100 Mbps
  - SCALANCE XC206-2; with 6x RJ45 ports 10/100 Mbps and 2x SC ports 100 Mbps
  - SCALANCE XC206-2SFP; with 6x RJ45 ports 10/100 Mbps and 2x SFP plug-in transceivers with 100 or 1000 Mbps

#### Benefits

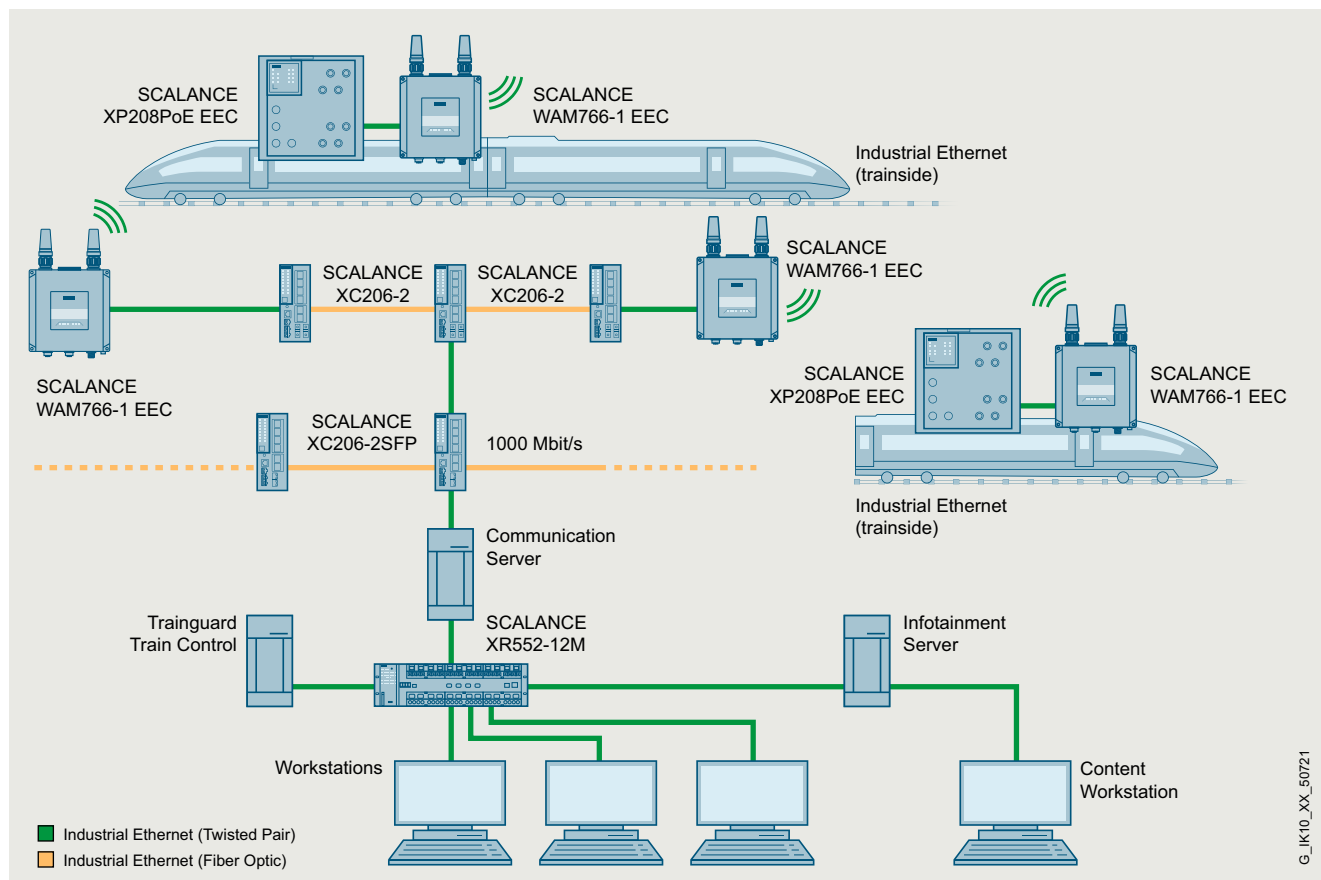

- Operational reliability in industrial environments, e.g. due to rugged enclosure, redundancy, temperature range from -40 °C to +70 °C
- Fast mobile diagnostics by smartphone or tablet in existing WLAN using NFC (near field communication)
- Integration of SCALANCE XC-200 switches into existing network management infrastructure (e.g. SINEC NMS) through SNMP accession thanks to rugged, industry-standard device connects
- Reliable plug-in connection in conjunction with industry-standard FastConnect connectors

## Network Components

### SCALANCE X – Industrial Ethernet Switches

#### SCALANCE XP-200 managed

##### Overview

SCALANCE XP216EEC

SCALANCE XP208EEC

The managed Industrial Ethernet switches of the SCALANCE XP-200 product line with 8 or 16 Ethernet ports are optimally suited for setup of cabinet-free automation concepts of Industrial Ethernet networks with transmission rates of 10/100/1000 Mbps in a line, star or ring structure.

- Integrated redundancy manager for setup of high availability networks in a ring structure
- Electrical station or network connection
- Rugged metal housing for mounting on SIMATIC ET 200pro rack, ITEM rail mounting or direct wall mounting
- Rugged industry-compatible station connections with industrial-compatible M12 plug connectors, (M12 D-coded for FastEthernet (10/100 Mbps) interfaces, M12 X-coded for 1000 Mbps interfaces)
- Redundant power supply (M12, A-coded)
- Console port (M12, D-coded)
- Diagnostics on the device by means of prominent LED display with integrated SELECT/SET button (power, link status, data communication, display mode)
- Error signaling contact with easy setting using SELECT/SET button
- Configuration storage using C-PLUG removable data storage medium
- Grounding screw for external ground connection

##### Product versions

###### SCALANCE XP208EEC

- with 8 electrical ports (10/100 Mbps, M12 D-coded)

###### SCALANCE XP208PoE EEC

- with 4 electrical ports (10/100 Mbps, M12 D-coded) and 4 electrical PoE ports (10/100 Mbps M12 D-coded)

###### SCALANCE XP216EEC

- with 12 electrical ports (10/100 Mbps, M12 D-coded) and 4 electrical ports (10/100/1000 Mbps, M12 X-coded)

###### SCALANCE XP216PoE EEC

- with 12 electrical ports (10/100 Mbps, M12 D-coded) and 4 electrical ports (10/100/1000 Mbps, M12 X-coded)  
A total of 8 ports with PoE can be used.

The switch is suitable for mounting outside a control cabinet especially in railway applications (EN 50155/45545), extended range (-40 to +70 °C).

##### Benefits

- Ideal solution for setup of Industrial Ethernet line, star and ring structures
- Industry-compatible plug-in connection (10/100 Mbps M12 D-coded and 10/100/1000 Mbps, X-coded)
- High network availability through setup of redundant ring structures (redundancy manager integrated)
- Integration of the SCALANCE XP-200 Industrial Ethernet switches in the existing network management infrastructure through SNMP access
- Easy integration in the process diagnostics and system diagnostics
- Fast device replacement under fault conditions through the use of C-PLUG
- Use under extreme ambient conditions (-40 to +70 °C)
- Use outside the control cabinet also possible (IP65/67 degree of protection)

## Network Components

### SCALANCE X – Industrial Ethernet Switches

#### SCALANCE X308-2M TS

##### Overview

The SCALANCE X-300 product line comprises compact Industrial Ethernet switches for setup of electrical and/or optical line, star and ring structures with transmission rates of 10/100/1000 Mbps.

- Fast media redundancy through integral redundancy manager for Gigabit Ethernet (SCALANCE X-300, X-400) and Fast Ethernet (e.g. in combination with SCALANCE X-200 switches)
- Seamless integration of automation networks into existing corporate networks thanks to support of a large number of IT standards: Setup of virtual networks (VLANs)
- Redundant integration into higher-level networks thanks to support of standardized redundancy procedures (Rapid Spanning Tree Protocol)
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network

##### Benefits

- High availability of the network thanks to
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cable (redundancy manager, standby function and RSTP are integrated)
  - Easy device replacement by means of plug-in C-PLUG removable data storage medium
  - Very fast reconfiguration of the network in event of a fault
- Lower susceptibility to failure and higher availability of the plant networking due to locking of the RJ45 FastConnect plug connectors in place in the securing collar of the RJ45 ports
- Protection of investment through integration in existing network management systems by means of standardized SNMP access
- Easy adaptation to different network structures, and reduction in stock keeping costs through flexibility of the partially modular versions

##### Application

SCALANCE X-300 products enable the setup of switched networks in the field level area and the control level area where high transmission speed is required in addition to high network availability and extensive diagnostic capabilities.

The main area of application is found in high-performance plant networks with connection to the corporate network.

The X308-2M TS is suitable for use in railway applications due to its specification according to EN 50155.

##### SCALANCE X308-2M TS

- For setup of optical line, ring or star structures
- Hub in the plant bus (redundant connection possible)
- SCALANCE X308-2M TS (TS = Transportation Systems); 4 x 10/100/1000 Mbps RJ45 ports, electrical  
2 x free module slots for 4 x 10/100/1000 Mbps media modules (electrical or optical)

### Technical specifications

Article number	<b>6GK5308-2GG10-2CA2</b>
Product type designation	SCALANCE X308-2M TS
<b>Transmission rate</b>	
Transmission rate	10/100/1000 Mbps
<b>Integrated interfaces for communication</b>	
<b>Number of electrical connections</b> • for network components or data terminal equipment	4
<b>Number of 100 Mbps ST(BFOC) ports</b> • for multimode	4
<b>Number of 100 Mbps SC ports</b> • for multimode	4
<b>Number of 1000 Mbps LC ports</b> • for multimode • for single-mode (LD)	4 4
<b>Other interfaces</b>	
<b>Number of electrical connections</b> • for signaling contact • for media module • for power supply • for redundant power supply	1 2 1 1
<b>Type of electrical connection</b> • for signaling contact • for power supply	2-pin terminal block 4-pin terminal block
<b>Type of removable data storage medium</b> • C-PLUG	Yes
<b>Signal inputs/outputs</b>	
<b>Operating current of the signaling contacts</b> • with DC, nominal value	24 V
<b>Operating current of the signaling contacts</b> • with DC, maximum	0.1 A
<b>Supply voltage, current consumption, power loss</b>	
<b>Type of power supply: redundant power supply</b>	No
<b>Type of supply voltage</b>	DC
<b>Supply voltage</b> • External • External	12 V 20 ... 30 V
<b>Supply voltage with DC</b> • Rated value	24 V 20 ... 30 V
<b>Product component: fusing at power supply input</b>	Yes
<b>Type of fusing at input for supply voltage</b>	F 3 A / 32 V
<b>Current consumption, maximum</b>	0.7 A
<b>Power loss [W]</b> • with 24 V DC	16.6 W
<b>Permissible ambient conditions</b>	
<b>Ambient temperature</b> • during operation • during storage • during transport • Remark	-40 ... +70 °C -40 ... +70 °C -40 ... +70 °C Reduced operating temperature through use of media modules (-40 to +70 °C) or SFP plug-in transceivers (-40 to +60 °C). In the case of vertical mounting position, the maximum operating temperature is reduced to +50 °C.
<b>Relative humidity</b> • Relative humidity at 25 °C, without condensation during operation, maximum	95%
<b>IP degree of protection</b>	IP20
<b>Design, dimensions and weights</b>	
<b>Model</b>	Compact
<b>Width</b>	120 mm
<b>Height</b>	125 mm
<b>Depth</b>	124 mm
<b>Net weight</b>	1.4 kg
<b>Product property: conformal coating</b>	Yes
<b>Mounting type</b> • 19-inch installation • 35 mm DIN rail mounting • Wall mounting • S7-300 rail mounting • S7-1500 rail mounting	In marine applications, mounting on the 35 mm DIN rail is not permissible. No Yes Yes Yes No

#### SCALANCE X308-2M TS

Article number	<b>6GK5308-2GG10-2CA2</b>
Product type designation	SCALANCE X308-2M TS
<b>Product properties, functions, components - General</b>	
<b>Cascading with redundant ring and reconfiguration time of &lt; 0.3 s</b>	100
<b>Cascading with star structure</b>	Any (only dependent on signal propagation time)
<b>Product functions - Management, configuration, engineering</b>	
<b>Product function</b>	
• CLI	Yes
• Web-based management	Yes
• MIB support	Yes
• TRAPs via e-mail	Yes
• Configuration with STEP 7	Yes
• RMON	Yes
• Port mirroring	Yes
• Multiport mirroring	Yes
• CoS	Yes
• PROFINET IO diagnostics	Yes
• Switch-managed	Yes
<b>Protocol is supported</b>	
• Telnet	Yes
• HTTP	Yes
• HTTPS	Yes
• TFTP	Yes
• FTP	Yes
• BOOTP	Yes
• GMRP	Yes
• DCP	Yes
• LLDP	Yes
• IGMP (snooping/querier)	Yes
<b>Product functions - Management, configuration, engineering (continued)</b>	
<b>Identification &amp; Maintenance function</b>	
• I&MO - Device-specific information	Yes
• I&M1 - Higher level designation/location designation	Yes
<b>Protocol is supported</b>	
• SNMP v1	Yes
• SNMP v2	Yes
• SNMP v3	Yes
<b>Product functions - Diagnostics</b>	
<b>Product function</b>	
• Port diagnostics	Yes
• Packet size statistics	Yes
• Packet type statistics	Yes
• Error statistics	Yes
• SysLog	Yes
<b>Product functions - VLAN</b>	
<b>Product function</b>	
• VLAN - port-based	Yes
• VLAN - protocol-based	No
• VLAN - IP-based	No
• VLAN - dynamic	Yes
<b>Number of VLANs, maximum</b>	255
<b>Number of dynamic VLANs, maximum</b>	255
<b>GVRP protocol is supported</b>	Yes
<b>Product functions - DHCP</b>	
<b>Product function</b>	
• DHCP client	Yes
• DHCP option 82	Yes
• DHCP option 66	Yes
• DHCP option 67	Yes
<b>Product functions - Redundancy</b>	
<b>Product function</b>	
• Ring redundancy	Yes
• High Speed Redundancy Protocol (HRP)	Yes
• High Speed Redundancy Protocol (HRP) with redundancy manager	Yes
• High Speed Redundancy Protocol (HRP) with standby redundancy	Yes
<b>Media Redundancy Protocol (MRP) is supported</b>	Yes
<b>Product function</b>	
• Media Redundancy Protocol (MRP) with redundancy manager	Yes
• Redundancy procedure STP	Yes
• Redundancy procedure RSTP	Yes
• Redundancy procedure MSTP	Yes
• Parallel Redundancy Protocol (PRP)/use in PRP network	Yes
• Parallel Redundancy Protocol (PRP)/Redundant Network Access (RNA)	No
• Passive listening	Yes

<b>C-PLUG</b> Removable data storage medium (conformal coating) for easy replacement of devices under fault conditions; for recording configuration data or engineering and application data; can be used in SIMATIC NET products with C-PLUG slot	<b>6GK1900-0AQ00</b>

<sup>1)</sup> Special fiber-optic cables, lengths and accessories available on request

<sup>2)</sup> Special tools and specially trained personnel are required for assembling glass FOC

#### More information

##### **Selection Tool:**

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular variants, the TIA Selection Tool is available at:

TIA Selection Tool:

<http://www.siemens.com/tia-selection-tool>

## Overview

SCALANCE XR324-4M PoE TS

SCALANCE XR324-4M EEC

SCALANCE XR324-12M TS

- Fast media redundancy through integrated redundancy manager both for Gigabit Ethernet (with SCALANCE X-300, X-400) and Fast Ethernet (e.g. in combination with SCALANCE X-200 switches)
- Seamless integration of automation networks in existing corporate networks thanks to support of a large number of IT standard functions (VLANs, IGMP-Snooping/Querier, STP/RSTP, Link Aggregation, Quality of Service)
- Redundant integration in higher-level networks thanks to support of standardized redundancy procedures (Spanning Tree Protocol/Rapid Reconfiguration Spanning Tree Protocol/MRP)
- Remote diagnostics by means of PROFINET diagnostics, web browser, CLI or SNMP

### SCALANCE XR324-4M PoE TS

The SCALANCE XR-300PoE Industrial Ethernet switches are partly modular, high-performance, industry-standard switches for setup of electrical and/or optical line, ring and star structures with transmission rates of 10/100/1000 Mbps, designed for installation in 19" control cabinets

- Up to 24 electrical and/or optical interfaces (10/100/1000 Mbps), of which 16 are integrated RJ45 ports, eight of which are PoE-capable; up to four electrical and/or optical 2-port media modules can also be inserted in the media module slots of the basic device.

### SCALANCE XR324-4M EEC

The SCALANCE XR-300EEC (Enhanced Environmental Conditions) industrial Ethernet switches are partly modular, high-performance, industry-standard switches for the construction of electrical and/or optical line, ring and star topologies at data transfer rates of 10/100/1000 Mbps, designed for installation in 19" control cabinets.

- Up to 24 electrical and/or optical interfaces (10/100/1000 Mbps), of which 16 are integral RJ45 ports; up to four electrical and/or optical 2-port media modules can also be inserted in the media module slots of the basic device

### SCALANCE XR324-12M TS

The SCALANCE XR-300 Industrial Ethernet switches are fully modular, high-performance, industry-standard switches for setup of electrical and optical line, ring and star structures with transmission rates of 10/100/1000 Mbps, designed for installation in 19" control cabinets.

- Up to 24 electrical and/or optical interfaces (10/100/1000 Mbps); up to 12 electrical and/or optical 2-port media modules can be inserted at any position in the basic device

## Benefits

- Unlimited flexibility for network expansions (e.g. more terminals) or upgrade (e.g. switching from copper to fiber-optic cable) and reduction of stock keeping costs due to the modular configuration with port modules
- High availability of the network thanks to
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cable (redundancy manager, standby function and STP/RSTP integrated)
  - Easy device replacement by means of plug-in C-PLUG removable data storage medium
  - Very fast reconfiguration of the network in event of a fault
- Lower susceptibility to failure and higher availability of the plant networking due to locking of the RJ45 FastConnect plug connectors in place in the securing collar of the RJ45 port modules
- Protection of investment through integration in existing network management systems by means of standardized SNMP access
- Space savings in control cabinet due to flexible cable outlet on the front or rear of the device

### SCALANCE XR324-4M PoE TS

- No need for additional power supply units and cabling for terminal devices due to PoE power supply

## Network Components

### SCALANCE X – Industrial Ethernet Switches

#### SCALANCE XR324-4M PoE TS / SCALANCE XR324-4M EEC / SCALANCE XR324-12M TS

#### Technical specifications

Article number	<b>6GK5324-4QG00-1CR2</b>
Product type designation	SCALANCE XR324-4M PoE TS
<b>Transmission rate</b>	
Transmission rate	10 /100/1000 Mbps
<b>Integrated interfaces for communication</b>	
<b>Number of electrical connections</b>	
• for network components or data terminal equipment	16
• with Power-over-Ethernet for network components or terminal equipment	8
<b>Number of 100 Mbps ST(BFOC) ports</b>	
• for multimode	8
<b>Number of 100 Mbps SC ports</b>	
• for multimode	8
<b>Number of 1000 Mbps LC ports</b>	
• for multimode	8
• for single-mode (LD)	8
<b>Other interfaces</b>	
<b>Number of electrical connections</b>	
• for operation panel	1
• for signaling contact	1
• for media module	4
• for power supply	1
• for redundant power supply	0
<b>Type of electrical connection</b>	
• for operation panel	RJ11 port
• for signaling contact	2-pin terminal block
• for power supply	4-pin terminal block
<b>Type of removable data storage medium</b>	
• C-PLUG	Yes
<b>Signal inputs/outputs</b>	
<b>Operating current of the signaling contacts</b>	
• with DC, nominal value	24 V
<b>Operating current of the signaling contacts</b>	
• with DC, maximum	0.1 A
<b>Supply voltage, current consumption, power loss</b>	
<b>Type of power supply: redundant power supply</b>	No
<b>Type of supply voltage</b>	DC
<b>Supply voltage</b>	
• External	24 V
• External	19.2 ... 28.8 V
<b>Product component: fusing at power supply input</b>	Yes
<b>Type of fusing at input for supply voltage</b>	F 5 A / 250 V
<b>Current consumption, maximum</b>	4.2 A
<b>Power loss [W]</b>	
• with 24 V DC	46 W
<b>Permissible ambient conditions</b>	
<b>Ambient temperature</b>	
• during operation	-40 ... +70 °C
• during storage	-40 ... +85 °C
• during transport	-40 ... +85 °C
• Remark	In the case of vertical mounting position, the maximum operating temperature is reduced to 60 °C
<b>Relative humidity</b>	
• Relative humidity at 25 °C, without condensation during operation, maximum	95%
<b>IP degree of protection</b>	IP20

### SCALANCE XR324-4M PoE TS / SCALANCE XR324-4M EEC / SCALANCE XR324-12M TS

Article number	<b>6GK5324-4QG00-1CR2</b>
Product type designation	SCALANCE XR324-4M PoE TS
<b>Design, dimensions and weights</b>	
<b>Model</b>	19-inch rack
<b>Number of modular height units for 19-inch cabinet</b>	1
<b>Width</b>	449 mm
<b>Height</b>	43.6 mm
<b>Depth</b>	305 mm
<b>Net weight</b>	6.8 kg
<b>Product property: conformal coating</b>	Yes
<b>Mounting type</b>	For 19-inch rack mounting, 4-point fixing is required for marine engineering applications

### More information

#### Selection Tool:

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular variants, the TIA Selection Tool is available at:

TIA Selection Tool:

<http://www.siemens.com/tia-selection-tool>

### Overview

The new SCALANCE XM-400 product range comprises modular Industrial Ethernet switches, expandable by various port extenders and plug-in transceivers for a maximum configuration with up to 24 ports. It supports 10/100/1000 Mbit technology for various transmission media (twisted pair, fiber optic) and increased port requirements. Thanks to the flexible, modular design, the XM-400 product line is also designed for future requirements and can be adapted to the relevant task.

- Combo ports for the flexible use of interfaces: A combo port consists of an electric port and an SFP slot. Only one of the two ports can ever be active. If an SFP plug-in transceiver is inserted, the electric port is deactivated
- Fast mobile diagnosis with smartphone/tablet thanks to WLAN and NFC: Fast access to the web-based management of the SCALANCE XM-400 via mobile websites. The function can be started using existing WLAN and NFC (Near Field Communication)

- High-speed media redundancy through integral redundancy manager even for large networks, for both Gigabit Ethernet and Fast Ethernet
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standards: Establishment of virtual networks (VLANs)
- Integration into higher-level enterprise networks thanks to support for standardized redundancy procedures (Rapid Spanning Tree Protocol, Link Aggregation)
- By learning the multicast sources and destinations (Internet Group Management Protocol (IGMP) Snooping), SCALANCE XM-400 switches can also filter multicast data traffic and thus limit the load on the network
- Optional activation of the Layer 3 functions for IPv4 and IPv6 in connection with the KEY-PLUG XM-400
- Creation of IP subnets and IP router communication by means of Layer 3 switching (IP routing)
  - Static routing
  - Dynamic routing OSPF (Open Shortest Path First) and RIPv2 (Routing Information Protocol)
  - Redundant routing VRRP (Virtual Router Redundancy Protocol)

### Product versions - basic devices

#### XM408-8C

- 8 ports available in total, of which
  - up to 8 x 10/100/1000 Mbit/s are RJ45 ports with retaining collars
  - up to 8 x SFP slots (combo ports), 100 or 1000 Mbit/s
- Two port extenders with 8 ports each can be connected to implement a maximum of 24 ports in one switch

### Technical specifications

Article number	6GK5408-8GS00-2AM2
<b>Transmission rate</b>	
Transfer rate	10/100/1000 Mbit/s
Number of ports maximum	24
<b>Interfaces for communication maximum configuration for modular devices</b>	
Number of electrical ports maximum	24
Number of electrical ports with PoE maximum	16
Number of optical ports maximum	24
<b>Interfaces for communication integrated</b>	
Number of electrical connections	8; RJ45 with securing collar
• for network components or terminal equipment	
Number of 10/100/1000 Mbit/s RJ45 ports Integrated	8
• with securing collar	
Number of electrical connections	8; 100 Mbit/s or 1000 Mbit/s SFP plug-in transceiver
• for SFP	
Number of combo ports with RJ45 interface for optical plug-in transceiver	8; 100 Mbit/s or 1000 Mbit/s SFP plug-in transceiver
Number of connectable extender modules	2
<b>Interfaces for communication pluggable maximum</b>	
Number of 10/100/1000 Mbit/s RJ45 ports	16

## Network Components

### SCALANCE X – Industrial Ethernet Switches

#### Port Extender for SCALANCE XM-400 managed

#### Overview

- Port extender for flexible expansion to up to 24 ports, can be connected to the SCALANCE XM-400 Industrial Ethernet switches
- Each port extender has eight ports
- There are three different versions, with different connections

#### Product versions

##### PE 408PoE

- 8 x 10/100/1000 Mbps RJ45 ports with retaining collar with PoE according to IEEE802.3 Type 1 and Type 2
- Extended operating temperature range from -40 °C to +60 °C
- A separate power supply is required for PoE power (SCALANCE PS924 PoE or SCALANCE PS9230 PoE are available)

#### Benefits

- Cost savings due to the modular system. The modular system allows the setup of electrical and optical Industrial Ethernet networks and the network topology and port type to easily be adapted to the plant structure and expanded at any time
- Integrated industrial network for data, speech, and video
- Mounting of a port extender on the basic device or another port extender without tools
- High performance due to Gigabit ports

#### Design

- Extender connection on the left for connection to a SCALANCE XM-400 basic device or a port extender
- Extender connection on the right for connecting another port extender
- 8 ports for Ethernet connection, different design depending on the version
- LEDs to display the port and device status
- 2 terminal blocks for Power-over-Ethernet supply with 54 V DC input (only PE408PoE)
- Operating temperature range from -40 °C to +70 °C
- IP20 degree of protection

## Network Components

Communication for PC-based systems

### CP 1604

#### Overview

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
	●	●	●				

- Integral 4-port real-time switch
- High performance through direct memory access
- Integration in network management systems through the support of SNMP
- Comprehensive diagnostics possibilities for installation, start-up and operation of the module
- Powerful configuration tools are part of the scope of delivery of the module
- The CP 1604 EEC (Enhanced Environmental Conditions) is suitable for use in extremely harsh industrial environments

#### Benefits

- Ideally suited for design of small local networks through integral 4-port real-time switch
- Simple portability to various operating system environments using DK-16xx PN IO development kit
- Uncrossed connecting cables can be used due to the integrated Autocrossover function
- Suitable for railway applications acc. to EN 50155 / IEC 60571 (EEC variant 6GK1160-4AT01 only)

#### Application

The CP 1604 provides high-performance support for control tasks on the PC (PC based Control, Numeric Control, Robot Control).

With IRT (Isochronous Real-Time), the CP is ideally suited to time-critical applications that are in the range of strictly isochronous closed-loop control in the motion control sector.

The integrated 4-port switch supports low-cost system solutions and the configuration of different topologies.

The DK-16xx PN IO development kit enables integration of the module into any operating systems.

The CP 1604 EEC (Enhanced Environmental Conditions) is suitable for use in extremely harsh industrial environments

#### Design

- Industrial Ethernet (via "Connection Board for CP 1604")
  - Ethernet real-time ASIC ERTEC 400
  - 4 x RJ45 connection
  - Integral 4-port real-time switch for 10/100 Mbit/s Ethernet
  - Half/full duplex
  - Autosensing/Autocrossover/Autonegotiation
- PCI-104-Plus interface:
  - PCI 2.2
  - 32 bits
  - 33 MHz or 66 MHz
  - Installation through PCI standard mechanisms (Plug & Play)
- Host interface/processor:
  - Dual-port RAM onboard
  - Flash for program memory onboard
  - ARM 946 RISK processor (32-bit) onboard for preprocessing
- Power supply:
  - Operating voltage: 5 V through PCI-104
- Size:
  - PCI-104 format

#### Product versions

CP 1604 EEC (6GK1160-4AT01), version suitable for use in railway applications

- Suitable for use in extreme environmental conditions

**Overview**

The RUGGEDCOM RM1224 is a small form-factor industrial 4G cellular router with integrated switch, which enables secure and cost effective connections to and from remote applications.

**Features**

- 4 copper fast Ethernet ports
- Available with LTE-Modem for Europe and North America
- 2 SMA antenna connectors for MIMO and diversity
- Digital in/out (I/O)
- Redundant Power Supply Inputs 24 V DC
- For use at ambient temperatures from -40 °C to +70 °C without the use of fans

**Product versions**

## RUGGEDCOM RM1224

- Small form-factor industrial Ethernet-switch and TCP/IP router with LTE WAN option

**Benefits**

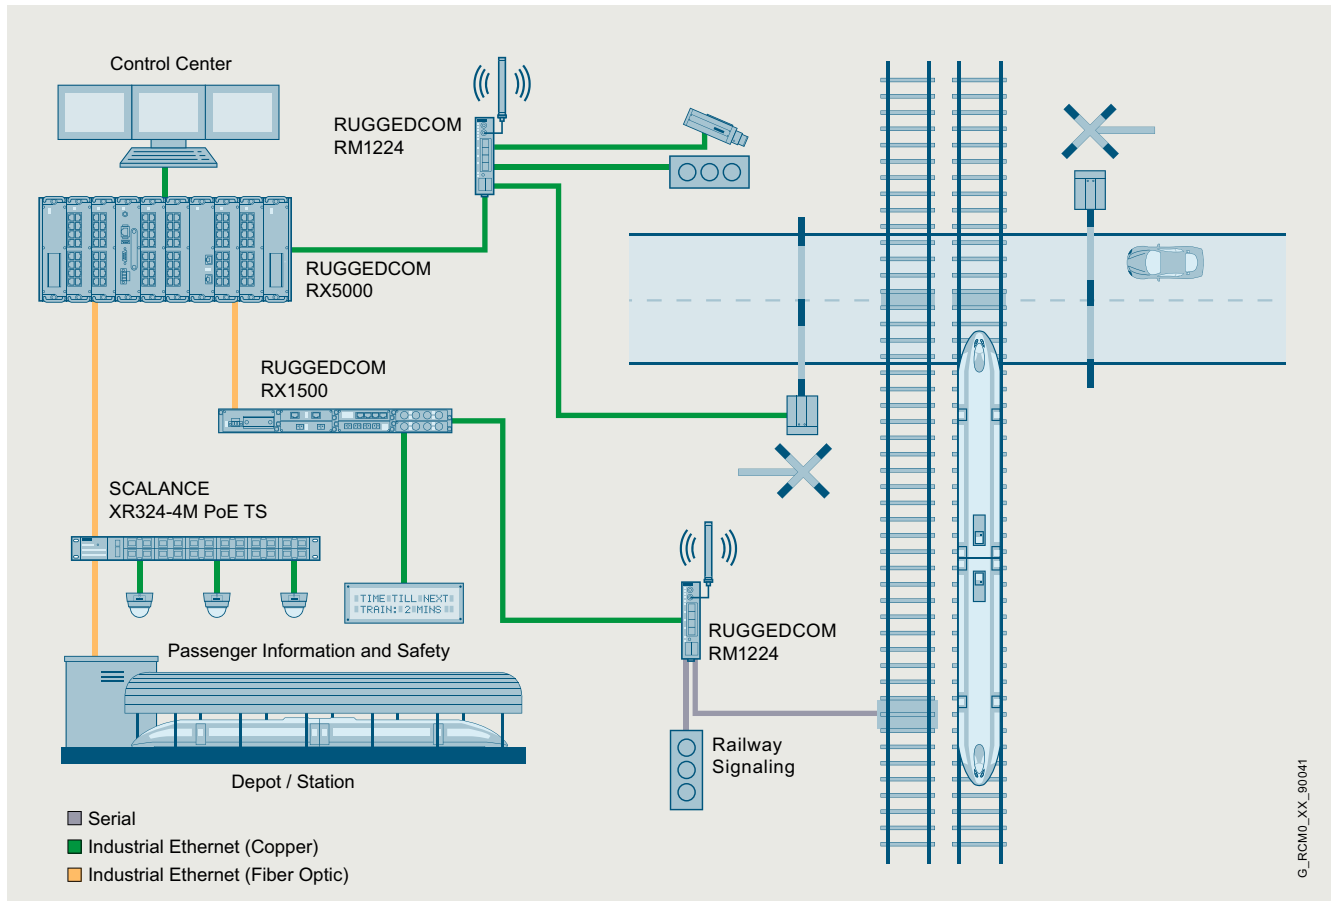

- Economical industrial graded cellular modem designed for space-saving integration in the cabinet
- Two antenna connectors for reliable wireless transmission
- Supports SINEMA Remote Connect
- Built-in Digital I/O which enables push-button VPN connectivity
- Robust plastic housing which fulfills a critical safety requirement in order to avoid using grounding in Mid & Low Voltage installations

## Network Components

### SCALANCE M / RUGGEDCOM – Mobile Wireless Routers

#### RUGGEDCOM RM1224

#### Integration

Redundant connection to end-devices used in conjunction with signaling and monitoring when wireline backhaul is combined with cellular connectivity.

## Overview

SCALANCE MUM856-1 are mobile wireless routers for high-performance and secure connection of Ethernet-based subnets and automation devices via mobile wireless networks with 5G, 4G (LTE) and 3G (UMTS). The devices can also be integrated as user equipment in private 5G networks.

SCALANCE MUM856-1 supports 5G Release 15. The device enables high transmission rates of up to 1000 Mbps in the downlink and up to 500 Mbps in the uplink.

Thanks to IPv6 support, the devices can also be connected to modern mobile wireless networks.

With an integrated firewall, the mobile routers offer data traffic control and thereby help protect against unauthorized access. Authentication of communication partners and encryption of transmitted data are performed via VPN, thus protecting against espionage and manipulation. The 5G routers offer a digital input and output. The digital output can be controlled remotely and used for example to put a remote device to sleep.

## Features

- Rugged IP65 metal enclosure
- Wall mounting, top hat DIN rail mounting with adapter or top hat DIN rail mounting in control cabinet with angle adapter
- 1 x M12 Gbit Ethernet interface with 1x10/100/1000 Mbps, can also be used for power supply of the device via Power over Ethernet (PoE)
- M12 connector for redundant connection to the 24 V DC supply voltage
- Combined M12 connector for one digital input/output
- 4 x N-Connect antenna port
- Diagnostics LEDs for modem status, field strength, connection control, and DI/DO channels
- SET button
- CLP slot for connection of a removable data storage medium
- Micro SIM card slot on the back of the device

## Product versions

### SCALANCE MUM856-1 (EU):

- Support for 5G (downlink: up to 1000 Mbps, uplink: up to 500 Mbps)
- EU radio approval, further approvals available soon
- Without 5G network automatic switching to 4G or 3G
- Connection to SINEMA Remote Connect via VPN
- Rugged design in IP65 enclosure also enables use outside the control cabinet
- Power supply of the device also possible via Power over Ethernet (PoE)
- Meets the railway standards EN 50155, EN 45545 and EN 5012
- Ambient temperature -30 °C to +60 °C

### SCALANCE M / RUGGEDCOM – Mobile Wireless Routers

#### SCALANCE MUM856-1

Article number	<b>6GK5856-2EA00-3DA1</b>
Product type designation	SCALANCE MUM856-1 (EU)
<b>Signal inputs/outputs</b>	
Number of digital inputs	1
Number of digital outputs	1
Type of electrical connection at the digital inputs/outputs	M12 (4-pin, A-coded)
Signal range	
• at digital input	DC, -30 V ... 30 V
• at digital output	DC 24 V/0.5 A
Operational current of the signaling contacts at DC at 30 V maximum	0.008 A
<b>WAN connection</b>	
Type of wireless network is supported	5G public networks, 5G private networks, LTE, UMTS
Type of mobile wireless service is supported	HSDPA, HSUPA, HSPA+
Frequency band is supported	
• 5G Non-Standalone (NSA)	n1, n3, n7, n20, n28, n38, n41, n77, n78, n79
• LTE	B1, B2, B3, B4, B5, B7, B8, B12, B13, B14, B17, B18, B19, B20, B25, B26, B28, B29, B30, B32, B66, B71, B34, B38, B39, B40, B41, B42, B43, B46, B48
• UMTS	B1, B2, B3, B4, B5, B8
<b>Supply voltage, current consumption, power loss</b>	
Supply voltage from Power-over-Ethernet according to IEEE802.3at for type 1 and IEEE802.3af	48 V
Type of voltage of the supply voltage	redundant supply, DC, 24 V, M12, L-coded
Consumed current	
• at DC at 24 V typical	0.55 A
• with Power-over-Ethernet according to IEEE802.3at for type 1 and IEEE802.3af typical	0.27 A
Power loss (W)	
• at DC at 24 V typical	13.2 W
• with Power-over-Ethernet according to IEEE802.3at for type 1 and IEEE802.3af typical	12.96 W
Type of voltage 1 of the supply voltage	DC
• supply voltage 1 rated value	24 V
Type of voltage 2 of the supply voltage	DC
• supply voltage 2 rated value	24 V
Type of voltage 3 of the supply voltage	DC, PoE
• supply voltage 3 rated value	48 V
<b>Ambient conditions</b>	
Ambient temperature	
• during operation	-30 ... +65 °C
• during storage	-40 ... +85 °C
relative humidity at 25 °C during operation maximum	95%
Protection class IP	IP65
<b>Design, dimensions and weights</b>	
Depth	45 mm
Height	179 mm
Width	166 mm
Net weight	1100 g
Fastening method	Wall mounting, mounting on a DIN rail with a separate mounting adapter
• 35 mm top hat DIN rail mounting	Yes
• wall mounting	Yes
<b>Product features, product functions, product components general</b>	
Product function	
• DynDNS client	Yes
• no-ip.com client	Yes

Article number	<b>6GK5856-2EA00-3DA1</b>
Product type designation	SCALANCE MUM856-1 (EU)
<b>Product functions management, configuration, engineering</b>	
<b>Product function</b>	
• CLI	Yes
• web-based management	Yes
• MIB support	Yes
• TRAP via email	Yes
<b>Protocol is supported</b>	
• Telnet	Yes
• HTTP	Yes
• HTTPS	Yes
<b>type of configuration</b>	web-based management
<b>Product functions diagnostics</b>	
<b>Protocol is supported</b>	
• SNMP v1	Yes
• SNMP v2	Yes
• SNMP v2c	Yes
• SNMP v3	Yes
<b>Product function</b>

• packet filter log	Yes
<b>Product functions DHCP</b>	
<b>Product function</b>	
• DHCP client	Yes
• DHCP server - internal network	Yes
<b>Product functions routing</b>	
<b>router function</b>	
• NAT (IP masquerading)	Yes
• port forwarding	Yes
• NAT traversal	Yes
• 1:1 NAT	Yes
• DNS cache	Yes
<b>Product functions security</b>	
<b>suitability for operation Virtual Private Network</b>	Yes
<b>firewall version</b>	Statefull Inspection
<b>Product function</b>	
• password protection	Yes
• packet filter	Yes
• broadcast/multicast/unicast limiter	No
• broadcast blocking	No
• with VPN connection	IPsec, OpennVPN (as client)
<b>number of possible connection with VPN connection</b>	20
<b>type of authentication with Virtual Private Network/PSK</b>	Yes
<b>Protocol is supported</b>	
• IPsec tunnel and transport mode	Yes
<b>Key length</b>	
• 1 with IPsec AES with Virtual Private Network	128 bit
• 2 with IPsec AES with Virtual Private Network	192 bit
• 3 with IPsec AES with Virtual Private Network	256 bit
• with IPsec 3DES with Virtual Private Network	168 bit
<b>Type of internet key exchange with Virtual Private Network</b>	
• main mode	Yes
• quick mode	Yes
<b>Type of packet authentication with Virtual Private Network</b>	MD5, SHA-1, SHA-256, SHA-384, SHA-512
<b>IETF profile with Virtual Private Network/X.509v3 certificate</b>	Yes

<b>SCALANCE MUM856-1 (EU)</b> Mobile wireless router for wireless IP communication of Industrial Ethernet-based applications via public 3/4/5G mobile wireless networks and private 5G networks, VPN, firewall, NAT, IPv6, and connection to SINEMA Remote Connect via CLP. • <b>SCALANCE MUM856-1 (EU)</b>	<b>6GK5856-2EA00-3DA1</b>

#### More information

To assist in selecting the right RUGGEDCOM products as well as configuration of variants, the RUGGEDCOM Selector is available at:

<http://www.siemens.com/ruggedcom-selector>

### Overview

SCALANCE M876-4 is a mobile wireless router for cost-effective and secure connection of Ethernet-based subnets and programmable controllers via mobile networks of the 4th (LTE), 3rd (UMTS) or 2nd (GSM) generation.

SCALANCE M876-4 supports LTE (Long Term Evolution). As a result, high transmission rates of up to 100 Mbps in the downlink and up to 50 Mbps in the uplink are possible (depending on the infrastructure of the mobile wireless provider).

Secure access and communication is ensured by the security functions of the integrated firewall and by VPN tunnels (end-to-end encryption of the communication connection by creation of IPsec tunnels).

### Product versions

#### SCALANCE M876-4 (EU)

- Pentaband LTE with frequency bands 800/900/1800/2100/2600 MHz
- Support of LTE (Downlink: up to 100 Mbps, uplink: up to 50 Mbps)
- Optimized for use in Europe
- Without LTE network, automatic switchover to UMTS (HSPA+) or GSM (EDGE, eGPRS or GPRS mode) data services

#### SCALANCE M876-4 (NAM)

- Pentaband LTE with frequency bands 700/850/AWS-1 (1700/2100)/1900 MHz
- Support of LTE (Downlink: up to 100 Mbps, uplink: up to 50 Mbps)
- Optimized for use in North America
- Without LTE network, automatic switchover to UMTS (HSPA+) or GSM (EDGE, eGPRS or GPRS mode) data services

#### **Selection tool:**

Our TIA Selection Tool is available to assist you in selecting the right remote networks products:

<http://www.siemens.com/tia-selection-tool>

### Overview

Remote antennas increase the reliability of wireless links by optimizing signal reception and emission.

- Used for routers, modems and communications processors for the mobile network standards GSM/GPRS (2G), UMTS (3G), LTE (4G)

### Benefits

- Cost-effective connection to devices in remote, difficult-to-access or hostile environments
- Establishment of a reliable mobile network infrastructure through the use of remote antennas, even if the mobile network devices are installed in the control cabinet, for example

### Application

Remote antennas optimize transmission and reception conditions and enable use of remote network products in a large number of industrial applications.

In addition to antennas with directional radiation characteristics, omnidirectional antennas concentrate the radio field around the antenna in the shape of a disc. Both designs therefore result in improved radio communication quality.

### Technical specifications

Article No.	<b>6GK5896-6MH00-0AA0</b>
Product type designation	Antenna ANT896-6MH
<b>Radio frequencies</b>	
<b>Type of wireless network is supported</b>	GSM, UMTS, LTE
<b>Operating frequency</b>	2.4 ... 2.7 GHz
• For WLAN in 2.4 GHz frequency band	
<b>Operating frequency</b>	700 MHz, 800 MHz, 850 MHz, 900 MHz, 1575.42 MHz, 1700 MHz, 1800 MHz, 1900 MHz, 2100 MHz, 2600 MHz
<b>Electrical specifications</b>	
<b>Impedance</b>	50 ohms
<b>Polarization</b>	Linear vertical
<b>Radiation characteristic</b>	Omnidirectional
<b>Antenna gain compared with the spherical radiator</b>	5 dB
• With linear radiation	
<b>Voltage standing wave ratio (VSWR), max.</b>	2.2
<b>Radiating angle of the antenna</b>	360°
• Horizontal	
<b>Number of electrical connections of the antenna</b>	1
<b>Design of the electrical connection of the antenna</b>	N-connector
<b>Connection version</b>	Female
<b>Transmit power, maximum</b>	100 W; at 50 °C ambient temperature
<b>Permissible ambient conditions</b>	
<b>Ambient temperature</b>	-40 ... +85 °C
• during operation	
• during storage	-40 ... +85 °C
<b>IP degree of protection</b>	IP69K
<b>Maximum wind load</b>	Survival at 500 km/h

#### More information

##### Cabling range:

Pre-assembled connecting cables for IRC products can be found in the Industry Mall under Antenna Connection System.

You can order components supplementary to the SIMATIC NET cabling range from your local contact. Technical advice on this subject is available from:

J. Hertlein  
 PD PA CI PRM 4

### Overview

- Industrial Wireless LAN access points for installation in control cabinets or in indoor areas with support of IEEE 802.11a/b/g/h/n and data rates of up to 300 Mbps

### Design

- Low-profile, compact aluminum housing, shock and vibration resistant for stringent mechanical requirements
- Special coating of the printed circuit boards (conformal coating)
- Resistant to condensation
- Railroad approval in accordance with EN 50155
- Degree of protection IP30
- For use at ambient temperatures from -30 ... +65 °C
- Support of 2.4 GHz and 5 GHz frequency bands
- 2 x R-SMA sockets for connection of directly mountable and remote antennas
- Optimized antenna placement for 2x2 MIMO technology; antennas do not interfere with each other when mounted directly on the device
- 2 x M12 connections for 10/100 Mbps, one with Power-over-Ethernet according to IEEE 802.3at
- 1 x M12 socket for power supply (24 V DC)
- 1 x PLUG slot (KEY-PLUG/C-PLUG)
- Function LEDs for optical signaling of faults and operating states
- Mounting: Wall, S7-1500 mounting rail, S7-300 mounting rail or 35 mm standard mounting rail
- A wireless card is permanently installed in the device; functional scope can be expanded by using a KEY-PLUG W780 iFeatures

### Function

The SCALANCE W774-1 M12 EEC (Extended Environmental Conditions) access points are designed for use in a railway environment. The devices are EN 50155-approved for railway applications and can thus be used for rail traffic. Combined with antennas approved for the rail sector, which are connected via R-SMA antenna connections (female), these products can be used to set up a reliable IWLAN infrastructure.

The devices can be mounted at an optimal location for the wireless link. The housing and the connection plugs are resistant to high shock and vibration loads because all the connections are screwed or locked. The SCALANCE W774 M12 EEC is ideally suited for environments in which a compact size is important. Through its coated printed-circuit boards (conformal coating), the module is resistant to condensation caused, for example, by use in environments with large temperature variations.

SCALANCE W774-1 M12 EEC access points can also be operated as client modules.

Provided that a time delay (several 100 ms), which arises from the roaming defined in IEEE 802.11, is tolerated by all communication stations following a change from one radio cell to another, the communication continues uninterrupted.

For real-time requirements, the SCALANCE W774-1 M12 EEC can be equipped with KEY-PLUG functionality for activating iFeatures.

## Network Components

### SCALANCE W – Industrial Wireless LAN

#### SCALANCE W1788-2 M12 EEC

#### Overview

- Industrial Wireless LAN access point for installation in control cabinets or in indoor areas with support of IEEE 802.11a/b/g/n/ac and data rates of up to 1733 Mbit/s

#### Design

- Rugged aluminum housing, shock and vibration-resistant, for stringent mechanical requirements
- Special coating of the printed circuit boards (conformal coating)
- Resistant to condensation
- Railway approval in accordance with EN 50155 and NEMA TS2
- Special features in addition to EN 50155, EN 45545-2, EN 50121-4, EN 50121-3-2, EN 50125-3
- High IP65 degree of protection against dust and water jets
- For use at ambient temperatures from -40 °C to +75 °C
- 8 x N-Connect sockets for the connection of direct mountable and remote antennas
- Optimized antenna placement for the 4x4 MIMO technology; antennas do not interfere with each other when mounted directly on the device
- Suitable for 2.4 GHz and 5 GHz
- 2 x M12 Ethernet x-coded Managed switch (1.000 Mbit/s), Power-over-Ethernet according to IEEE 802.3at
- 1 x M12 socket for power supply (24 V DC)
- 1 x C-PLUG slot (KEY-PLUG/C-PLUG)
- Function LEDs for optical signaling of faults and operating states
- VESA 100 mounting system
  - Wall mounting
  - DIN rail T35 (S7-1200) DIN rail S7-300
  - DIN rail S7-1500
- Two wireless cards are permanently installed in the device; functional scope can be expanded by using a CLP

#### Technical specifications

Article number	<b>6GK5788-2GY01-0TA0<sup>1)</sup></b>
Product type designation	SCALANCE W1788-2 M12 EEC
<b>Transmission rate</b>	
<b>Transmission rate</b>	
• on WLAN, maximum	1733 Mbps
• on Industrial Ethernet	10 Mbps, 100 Mbps, 1 000 Mbps
<b>Interfaces</b>	
<b>Number of electrical connections</b>	
• for network components or data terminal equipment	1
• for power supply	1
• for redundant power supply	1
<b>Type of electrical connection</b>	
• for network components or data terminal equipment	M12 interface (8-pin, X-coded), PoE
• for power supply	M12 interface (4-pin, A-coded)
<b>Type of removable data storage medium</b>	
• C-PLUG	Yes
• KEY-PLUG	Yes
<b>Wireless interfaces</b>	
<b>Number of permanently installed wireless cards</b>	2
<b>Type of transmission for multiple input multiple output (MIMO)</b>	4x4
<b>Number of spatial streams</b>	3
<b>Number of electrical connections for external antenna(s)</b>	8
<b>Type of electrical connection for external antenna(s)</b>	N-Connect (female)
<b>Product property: external antenna can be mounted directly on device</b>	Yes
<b>Supply voltage, current consumption, power loss</b>	
<b>Type of supply voltage</b>	DC
<b>Supply voltage 1</b>	
• from M12 power connector (A-coded) for redundant power supply	16.8 V
<b>Supply voltage 2</b>	
• from M12 power connector (A-coded) for redundant power supply	31.2 V
<b>Supply voltage</b>	
• from Power-over-Ethernet in accordance with IEEE802.3at for Type 1 and IEEE802.3af	48 V
• from Power-over-Ethernet in accordance with IEEE802.3at for Type 2	50 V

Article number	<b>6GK5788-2GY01-0TA0<sup>1)</sup></b>
Product type designation	SCALANCE W1788-2 M12 EEC
<b>Current consumption</b>	
• with 24 V DC, typical	0.7 A
• with Power-over-Ethernet in accordance with IEEE802.3at for Type 1 and IEEE802.3af, typical	0.385 A
• with Power-over-Ethernet in accordance with IEEE802.3at for Type 2, typical	0.3 A
<b>Power loss [W]</b>	
• with 24 V DC, typical	16.8 W
• with Power-over-Ethernet in accordance with IEEE802.3at for Type 1 and IEEE802.3af, typical	18.5 W
• with Power-over-Ethernet in accordance with IEEE802.3at for Type 2, typical	15 W
<b>Permissible ambient conditions</b>	
<b>Ambient temperature</b>	
• during operation	-40 ... +75 °C
• during storage	-40 ... +85 °C
• during transport	-40 ... +85 °C
<b>Relative humidity at 25 °C, without condensation during operation</b>	90%
<b>Ambient conditions for operation</b>	When used under explosion protection conditions (Zone 2), the SCALANCE W788-x or W748-x product must be installed in an enclosure with at least IP54 degree of protection according to EN 60529 within the jurisdiction of EN 50021.
<b>IP degree of protection</b>	IP65
<b>Design, dimensions and weights</b>	
<b>Width of housing without antenna</b>	258 mm
<b>Height of housing without antenna</b>	258 mm
<b>Depth of housing without antenna</b>	80 mm
<b>Net weight</b>	2.7 kg
<b>Mounting type</b>	For 35 mm DIN rail mounting, an additional mounting adapter is needed
• S7-300 rail mounting	Yes
• S7-1500 rail mounting	Yes
• Wall mounting	Yes
<b>Radio frequencies</b>	
<b>Operating frequency</b>	
• for WLAN in 2.4 GHz frequency band	2.41 ... 2.48 GHz
• for WLAN in 5 GHz frequency band	4.9 ... 5.8 GHz
<b>Product properties, functions, components - General</b>	
<b>Product function - Access point mode</b>	Yes
<b>Product function - Client mode</b>	Yes
<b>Number of SSIDs</b>	16
<b>Product function</b>	No
• Dual client	Yes; only in combination with the 'KEY-PLUG W780 iFeatures'
• iPCF access point	Yes; only in combination with the 'KEY-PLUG W780 iFeatures' or 'KEY-PLUG W740 iFeatures'
• iPCF client	Yes; only in combination with the 'KEY-PLUG W780 iFeatures'
• iPCF-MC access point	Yes; only in combination with the 'KEY-PLUG W780 iFeatures' or 'KEY-PLUG W740 iFeatures'
• iPCF-MC client	Yes; only in combination with the 'KEY-PLUG W780 iFeatures' or 'KEY-PLUG W740 iFeatures'
<b>Number of iPCF-enabled wireless modules</b>	0
<b>Product function - iREF</b>	Yes; only in combination with the 'KEY-PLUG W780 iFeatures'
<b>Number of iREF-enabled wireless modules</b>	0
<b>Product functions - Management, configuration, engineering</b>	
<b>Number of manageable IP addresses in the client</b>	8
<b>Product function</b>	
• CLI	Yes
• Web-based management	Yes
• MIB support	Yes
• TRAPs via e-mail	Yes
• Configuration with STEP 7	Yes
• Configuration with STEP 7 in the TIA Portal	Yes
• Operation with IWLAN controller	No
• Operation with Enterasys WLAN controller	No
• Forced roaming with IWLAN	Yes
• WDS	Yes
<b>Protocol is supported</b>	
• Address Resolution Protocol (ARP)	Yes
• ICMP	Yes
• Telnet	Yes
• HTTP	Yes
• HTTPS	Yes
• TFTP	Yes
• DCP	Yes

## Network Components

### SCALANCE W – Industrial Wireless LAN

#### SCALANCE WAM766-1 EEC

#### Overview

Industrial access point according to IEEE 802.11ax (WiFi 6).

- Particularly suitable for industrial applications with cabinet-free setup

#### Design

- Rugged enclosure, shock and vibration resistant for stringent mechanical requirements
- High IP65 degree of protection against dust and water jets
- For use at ambient temperatures from -30 °C to +75 °C (EEC variant)
- 2 x N-Connect sockets for the connection of direct mountable and remote antennas
- Supports channels in 2.4 GHz and 5 GHz band
- 1 x M12 connection for 10/100/1 000 Mbps with Power over Ethernet according to IEEE 802.3bt Type 1, Class 3
- 1 x M12 socket for redundant energy supply (24 V DC)
- 1 x M12 socket with digital input/digital output (DI/DO)
- 1 x CLP slot
- Function LEDs for optical signaling of faults/errors and operating states
- Mounting: Wall, VESA, 35 mm DIN rail (also in 90°) with mounting adapter

#### Product variants

SCALANCE WAM766-1 (6GK5766-1GE00-7DA0)

- Industrial access point for indoors, functional scope can be expanded using a CLP removable data storage medium.

SCALANCE WAM766-1 EEC (6GK5766-1GE00-7TA0)

- Industrial access point for extended ambient conditions, functional scope can be expanded using a CLP removable data storage medium.

## Network Components

### SCALANCE W – Industrial Wireless LAN

ANT795-4MX / ANT795-6MN / ANT795-6MT / ANT793-8DL / ANT793-8DP / ANT795-6DC / ANT793-6DG

#### Overview

Remote antennas increase the reliability of wireless links by optimizing signal reception and emission.

- Use in Industrial Wireless LAN (IWLAN) and WLAN in accordance with IEEE 802.11 at 2.4 GHz and 5 GHz
- Coordinated range of antennas for the most diverse applications both indoors and outdoors

#### Benefits

- Investment protection thanks to compliance with the globally recognized standard IEEE 802.11 and – depending on the version – suitability for 2.4 GHz and/or 5 GHz
- Cost-effective connection to devices in remote, difficult-to-access or hostile environments
- Establishment of a reliable IWLAN wireless infrastructure through the use of remote antennas, even if the access points and client modules are installed in the control cabinet, for example

#### Application

Remote antennas optimize transmission and reception conditions and enable use of IWLAN products in a number of industrial applications.

With sector antennas, for example, conveyor lines or corridors can be specifically covered with radio links, or strongly directional antennas can be used to implement point-to-point connections over distances of up to several 1000 meters.

Alternatively, an omnidirectional antenna concentrates the radio field around the antenna in the shape of a disc, which enhances the quality of the connection.

#### Application examples:

##### Omnidirectional antennas

- Coverage of an area which has at its center a mast for mounting the antenna
- Installation of the antenna on the roof in the case of automated guided vehicle systems for reliable data exchange with the vehicles
- Wide-area coverage of a production cell or robot station

##### Directional antennas

- Communication between buildings over long distances with the help of an antenna with narrow beam angle and high gain

##### Sector antennas

- Selective coverage of warehouse/high-bay warehouse aisles with the help of a wide-angle antenna prevents interference with neighboring wireless fields

All antennas can be connected to SCALANCE W via an antenna connection cable from the range of IWLAN cabling technology.

For details and direct ordering, please see: <https://mall.industry.siemens.com/mall/de/de/Catalog/Products/10090612?tree=CatalogTree>

## Network Components

### RUGGEDCOM – Layer 2 Switches

#### RUGGEDCOM RSG907R and RSG909R

#### Overview

The RUGGEDCOM RSG907R and RSG909R, two full Gigabit switches in a compact design, offering both HSR and PRP functionality to mitigate the risk of communication disruptions and downtime. These rugged Gigabit switches are designed to operate in harsh environments with widely varying climatic and environmental conditions. Tested and certified to withstand extreme temperature, vibration and shock, the RUGGEDCOM RSG907R and RSG909R offer exceptional reliability for industrial applications such as electric utility substations, transportation systems and oil&gas.

The RUGGEDCOM RSG907R and RSG909R are ideal for applications that require high bandwidths and accommodate future network expansions. Three Redundant Network Access SFP ports providing ultimate flexibility in media and distance, with support for Gigabit bandwidth. The RSG907R connects up to 4 IEDs via 100BASE-FX fiber optics and RSG909R connects up to 6 IEDs via copper Ethernet on the Singly Attached Node ports.

Both products offer various network design options and cost savings through increased redundancy, reduced downtimes and high reliability.

#### HSR / PRP with Gigabit/s interfaces

Avoid revenue loss by mitigating the risk of communication disruptions and downtime with a redundant fault tolerant network supporting high bandwidth.

#### SFP RNA ports

SFP ports can be modified at any time allowing deployment flexibility for varying customer needs.

#### Power redundancy

Maintain continuous safe and reliable operations even during power failures, diminishing the risk of revenue and data loss.

#### Full fiber solution

Reduce failure rates due to increased immunity from electromagnetic phenomena. IEEE 1588The RSG907R and RSG909R enable the creation of a future proof network with support for IEEE 1588 time synchronisation.

## Network Components

### RUGGEDCOM – Layer 2 Switches

#### RUGGEDCOM RSG920P

#### Overview

The RUGGEDCOM RSG920P is a rugged Layer 2 Gigabit switch with high port density in small form factor with Power-over-Ethernet (PoE) capability that has been designed for control cabinets with limited space and for high bandwidth requirements. The RUGGEDCOM RSG920P provides maximum reliability for industrial applications, such as in transportation and oil & gas applications, and is tested and certified to withstand extreme temperatures, vibrations and shocks.

The Power-over-Ethernet interfaces of the RUGGEDCOM RSG920P are fed by an external power supply. RUGGEDCOM RPS1300 is the related power supply. It is adequately sized to operate all 4 Power-over-Ethernet interfaces simultaneously.

## Network Components

### RUGGEDCOM – Layer 2 Switches

#### RUGGEDCOM RS900G / RUGGEDCOM RS900GP

#### Overview

The RUGGEDCOM RS900 product family for use in the power supply sector comprises a number of fully-managed Ethernet switches that are specially designed for reliable use in hostile operating environments for electrical equipment and demanding climatic conditions. They provide a high degree of immunity to electromagnetic interference and strong electrical disturbances, which are typically present in factory buildings and in roadside traffic control cabinets. A temperature range

from -40 °C to +85 °C enables them to be placed almost anywhere.

#### Characteristics

- Many different copper and fiber-optic port configurations with transmission rates up to 1 Gbps
- Fiber-optic cable variants are available with multimode or single-mode optical transceiver-receivers and various interfaces (LC, SC, SFP)
- Options for 24 V DC to 48 V DC or high voltage (88-300 V DC / 85-264 V AC) for worldwide operation
- Operation without fans for operating temperatures from -40 °C to +85 °C
- Variety of management interfaces: web-based, Telnet, command line
- Available in a version that supports Power over Ethernet (PoE)

#### Product versions

##### RUGGEDCOM RS900G

- Managed Ethernet switch with 10 ports, Gigabit fiber-optic uplinks and 56- or 128-bit encryption

##### RUGGEDCOM RS900GP

- Managed Ethernet switch with 10 ports, including 8 Power over Ethernet (PoE) ports and 2 Gigabit uplinks, with 56- or 128-bit encryption

## Network Components

### RUGGEDCOM – Layer 2 Switches

#### RUGGEDCOM RSG908C / RUGGEDCOM RSG910C

#### Overview

The RUGGEDCOM RSG910C and RSG908C are compact all Gigabit, IEEE 1588 compatible Ethernet switches. The RSG910C supports 4 Gigabit SFP uplink ports and 6 10/100/1000TX copper ethernet ports while the RSG908C supports 4 Gigabit SFP uplink ports and 4 multi mode fiber 100FX ports with LC connectors. Both products come with an integrated DIN rail mount and front-facing interfaces for easy installation in space-limited areas. They offer redundant power inputs for both DC and high voltage AC/DC applications, eliminating a single point of failure. Designed to operate in harsh environments with widely varying climatic and environmental conditions, these devices can be used for precise time synchronization in the Electric Power industry; for high-bandwidth applications such as video streaming in the Transportation industry and for time-critical applications such as drilling automation, SCADA (Supervisory Control and Data Acquisition) and RTU (Remote terminal unit) solutions for wellhead automation, pipeline monitoring, compression or pumping stations in the oil & gas industry.

#### Characteristics

- 4 Fiber optic (100BASE-FX, LC) or 6 Copper (10/100/1000BASE-X, RJ45) ports
- Industry standard connectors: SFP, LC and/or RJ45
- Fully integrated power supply with redundant power inputs
  - Universal high-voltage dual inputs: 100 VAC – 240 VAC/ 100 VDC – 300 VDC
  - Universal low-voltage DC dual inputs with nominal voltages: 12 VDC, 24 VDC, 48 VDC (10 – 60 VDC)
- Non-blocking store and forward switching
- For use at ambient temperatures from –40 °C to +85 °C without the use of fans

#### Product versions

##### RUGGEDCOM RSG910C

- The RUGGEDCOM RSG910C is a compact Gigabit IEEE 1588 compatible Ethernet switch, providing 4 Gigabit SFP ports and 6 Gigabit copper ports

##### RUGGEDCOM RSG908C

- The RUGGEDCOM RSG908C is a compact Gigabit IEEE 1588 compatible Ethernet switch, providing 4 Gigabit SFP ports and 4 100 FX multimode fiber optic ports with LC connectors.

## Network Components

### RUGGEDCOM – Layer 2 Switches

#### RUGGEDCOM RST916P / RUGGEDCOM RST916C

#### Overview

The RUGGEDCOM RST916 product family are utility-grade, fully-managed 16-port compact Ethernet switches designed for reliable high-bandwidth connectivity in harsh industrial

environments, and CSA/UL 62368 safety approved from -40 °C to +85 °C.

#### Characteristics

- 12 x 10/100/1000BASE-T RJ45 ports
- 4 x 1G/10G BASE-X/1000BASE-X SFP+
- Long-haul fiber optics allow Gigabit distances of up to 115 km
- IEEE 1588 v2 Transparent Clock
- Removable storage medium, CLP, for device configuration back-up

#### Product versions

##### RUGGEDCOM RST916P

16-port managed 10 Gigabit PoE switch

- 10 x 10/100/1000BASE-T IEEE 802.3bt Types 1, 2, and 3 compliant PoE ports (up to 60 W/port)
- Supplies up to 420 W of PoE power

##### RUGGEDCOM RST916C

16-port managed 10 Gigabit Ethernet switch with redundant

### RUGGEDCOM – Layer 2 Switches

#### RUGGEDCOM RSG2100 / RUGGEDCOM RSG2300

##### Overview

RUGGEDCOM RSG2100

RUGGEDCOM RSG2300

RUGGEDCOM RSG2100

The RUGGEDCOM RSG2100 is a modular fully-managed Ethernet switch that is especially well-suited for use in hostile operating environments for electrical equipment and demanding climatic conditions.

RUGGEDCOM RSG2300

The RUGGEDCOM RSG2300 product family consists of fully-managed Ethernet switches with 32 ports and 4 modular Gigabit uplink ports.

##### Characteristics

- Fully integrated dual redundant (optional) high voltage and low voltage power supplies
- Operation without fans for operating temperatures from -40 °C to +85 °C

##### RUGGEDCOM RSG2100

- Modular managed Ethernet switch with 19 ports, Gigabit uplinks and 56- or 128-bit encryption
- Up to 3 Gigabit Ethernet ports and 16 Fast Ethernet ports - copper and/or fiber-optic
- 2-port modules for outstanding flexibility
- Store und Forward switching
- Support of many different fiber-optic cable types (multimode, single-mode) with a variety of connections (ST, MTRJ, LC, SC, SFP)
- Variant with 4 fixed 10/100BaseTX, 802.3af-compliant (PoE) Ethernet ports (RUGGEDCOM RSG2100P and RSG2100PNC)

##### RUGGEDCOM RSG2300

- Managed Ethernet switch with 32 ports, Gigabit uplinks and 56- or 128-bit encryption
- 24 Fast Ethernet copper ports
- Optional: Up to 4x 1000LX Gigabit Ethernet ports (copper and/or fiber-optic) and up to 8x 100FX Fast Ethernet fiber-optic ports
- Non-blocking, Store und Forward switching
- Support of many different fiber-optic cable types (multimode, single-mode, bidirectional single strand) with a variety of connections (ST, MTRJ, LC, SC, SFP)
- Variant available with up to four 802.3af-compliant ports (10/100BaseTX) (RUGGEDCOM RSG2300P and RSG2300PNC)

The RUGGEDCOM Selector assists you in selecting the right RUGGEDCOM products and in configuring variants and is

available at:  
<http://www.siemens.com/ruggedcom-selector>

### Overview

The RUGGEDCOM RST2228 is a high port density field modular 19" Layer 2 rack switch with 10 Gbit/s uplinks, support for IEEE 1588.

### Design

- Up to 28 Ethernet ports – 4 x 1000BASE-X/10GBASE-X integrated uplinks and up to 24 x 10/100/1000BASE-X ports
- 6 slots for 4-port Media Modules for tremendous flexibility
- Media modules with 4 x 10/100/1000 Mbit/s RJ45, FastConnect or 100/1000 Mbit/s SFP interfaces
- Supports precision timing according to IEEE 1588 (transparent clock). Support HSR/PRP functions (with RedBox, QuadBox and Coupling capabilities) with the help of RUGGEDCOM RMM2972-2RNA, Media Module, 2 x 100/1000 Base-X SFPs (SFPs not included)
- Non-blocking, store and forward switching
- Dual-redundant (optional), load sharing, high-voltage power supplies
- For use at ambient temperatures from –40 °C to +85 °C without the use of fans
- Power-over-Ethernet variant available supporting IEEE 802.3at/802.3bt (draft) with up to 60 W/port and a maximum power budget from 500 W. RUGGEDCOM RST2228P is compatible with the rack-mount RUGGEDCOM RPS2410 600 W PoE power supply.

### Product versions

#### RUGGEDCOM RST2228

- 28-port field modular managed layer 2 Gigabit/s switch with 10 Gbit/s uplinks supporting IEEE 1588

#### RUGGEDCOM RST2228P

- 28-port field modular managed layer 2 Gigabit/s switch with 10 Gbit/s uplinks supporting IEEE 1588 and Power-over-Ethernet according IEEE 802.3at/803.bt (draft)

### Benefits

- Future-proof Ethernet switch with high port density to minimize capital expense by reducing the number of devices needed.
- Field-modular media modules with RJ45, FastConnect & SFP interfaces and build-to-order design ensures seamless servicing and tremendous flexibility in tailoring the device configuration resulting in lower operating expenses
- Suitable for usage in electric power, transportation and oil & gas applications due to a utility grade design with immunity against EMI and heavy electrical surges
- Future-proof due to support of modern IEEE 1588 time synchronization features. Improved network reliability with 0s failover time providing seamless redundancy.
- Suitable for usage in harsh environments with the minimal risk of mechanical failures due to an operating temperature from –40 °C to +85 °C without fans

#### More information

To assist in selecting the right RUGGEDCOM products as well as configuration of variants, the RUGGEDCOM Selector is available at:

<http://www.siemens.com/ruggedcom-selector>

### Overview

The RUGGEDCOM RSG2488 is the first locally upgradable Layer 2 switch with 28 non-blocking Gigabit ports and dual redundant power supplies that are replaceable during operation.

### Characteristics

- Up to 28 Gigabit Ethernet ports - copper and/or fiber-optic; 19-inch, 1 HU rack mounting
- Fully modular; field-replaceable Ethernet media modules with 2/4 ports for outstanding flexibility
- Support of media modules with 100FX or 1000SX fiber-optic ports
- Optional PTP module provides GPS time source and IRIG-B input/output
- Support of IEEE 1588 (PTP), SNTP, IRIG-B; the time of day can be converted between all these formats
- Non-blocking, Store und Forward switching
- Support of many different fiber-optic cable types (multimode, single-mode, bidirectional single strand) with a variety of connections (LC, SC, SFP, ST)
- Dual redundant (optional) load-dividing high voltage and low voltage power supplies that are replaceable during operation
- Operation without fans for operating temperatures from -40 °C to +85 °C

### Product versions

RUGGEDCOM RSG2488

- Modular managed Gigabit Ethernet switch with 28 ports and 128-bit encryption

RUGGEDCOM RSG2488NC

- Modular managed Gigabit Ethernet switch with 28 ports and 56-bit encryption

### Overview

The RUGGEDCOM RX1400 is a rugged Industrial Ethernet switch and TCP/IP router with LTE and fiber-optic WAN options in compact size for reliable, cost-effective implementation of comprehensive communication applications and a high processing output in harsh industrial environments.

### Characteristics

- 4x Fast Ethernet copper ports and 2x Gigabit SFP (small form factor pluggable) slots
- Support of multimode and single-mode SFPs for distances of 500 m up to 100 km
- Equipped with GPS input
- Available with or without LTE modem for Europe, North America, the Asia-Pacific region and Japan. Fully integrated power supply, +/-12-24 V DC
- Operation without fans for operating temperatures from -40 °C to +85 °C
- RUGGEDCOM VPE1400: Virtualization enables a complete Linux image (with dedicated memory media and I/O ports) that can run in parallel with the RUGGEDCOM ROX II operating system.

### Technical specifications

#### Overview

RUGGEDCOM RX1500/RX1524

RUGGEDCOM RX1501/RX1536

RUGGEDCOM RX1510

The RUGGEDCOM RX1500 series is a multi-service platform for the power supply sector, available in different sizes for 19-inch rack mounting and DIN/panel mounting. The RUGGEDCOM RX1500 series has a modular, field-replaceable platform that allows customers to choose between various WAN options, serial options and Ethernet options and is thus extremely well-suited for rail and traffic control systems.

#### Characteristics

- General device characteristics
  - Field-replaceable line modules
- RUGGEDCOM RX1500/RX1524:
  - Up to 24x 100FX ports
  - Up to 24x 10/100TX ports
  - Up to 12x 10FL/100SX ports
  - Up to 8 Gigabit Ethernet ports
  - Up to 24 serial ports
- RUGGEDCOM RX1501/RX1536:
  - Up to 36 ports 100FX
  - Up to 36 ports 10/100TX
  - Up to 18 ports 10FL / 100SX
  - Up to 4 ports Gigabit Ethernet
  - Up to 36 Serial Ports
- RUGGEDCOM RX1510:
  - Up to 24x 100FX ports
  - Up to 24x 10/100TX ports
  - Up to 12x 10FL/100SX ports
  - Up to 8 Gigabit Ethernet ports
  - Up to 24 serial ports

- WAN port options
  - T1/E1 (channelized)
  - E1 75 ohms via BNC
  - Mobile wireless
  - DDS
- Power supply
  - RUGGEDCOM RX1500, RX1510:
    - Modular power supply that is replaceable during operation
    - Input voltage range 24 V DC, 48 V DC, 88-300 V DC and 85-264 V AC for worldwide operation
    - Fully integrated power supply (no external adapters)
    - Safety approval according to CSA/UL 60950 up to +85 °C
- Cyber security
  - Integrated router, firewall and VPN functionality
  - Stateful firewall with NAT
  - Complete IPsec Virtual Private Networking
  - VPN with support for 3DES, AES128, AES256
  - RUGGEDCOM CROSSBOW for cyber security conformity in accordance with NERC CIP
  - Central RADIUS password management
  - Multilevel passwords
  - SSH/SSL encryption
  - Enable/disable ports, MAC-based port security
  - VLAN (802.1Q) for separation and protection of network traffic
  - SNMPv3-encrypted authentication and access protection
  - Optional checkpoint firewall and IPS (see RUGGEDCOM APE module)
- WAN protocols
  - Frame relay RFC 1490 or RFC 1294
  - PPP RFC 1661, 1332, 1321, 1334, PAP, CHAP authentication
  - GOOSE message support
- IP
  - Routing: OSPF, BGP, RIPv1 and RIPv2
  - VRRP
  - Traffic control, NTP server
  - IP multicast routing
  - DHCP agent (option 82 possible)
  - MPLS
- Reliability in harsh environments
  - EMC and immunity from electrical interference in the high voltage range
  - Meets requirements of IEEE 1613 (electric power stations for power supply and distribution)
  - Exceeds requirements of IEEE 61850-3 (electric power stations for power supply and distribution)
  - Exceeds requirements of IEC 61800-3 (drive systems with variable speed)
  - Exceeds requirements of IEC 61000-6-2 (general industrial environment)
  - Exceeds requirements of NEMA TS-2 (traffic control systems)
  - Operating temperature -40°C to +85°C (operation without fan)
  - Fail-safe output relay: For signaling of critical failures or errors
  - Zinc-plated steel housing (18 AWG) and adapter for 19-inch rack mounting

#### Product versions

##### RUGGEDCOM RX1500/RX1524

- Modular, 19-inch rack-mounted Layer 2 and Layer 3 switch and router with optional redundant power supply

##### RUGGEDCOM RX1501/RX1536

- Modular, 19-inch rack-mounted Layer 2 and Layer 3 switch and router with single power supply

##### RUGGEDCOM RX1510

- Modular Layer 2 and Layer 3 switch and router in compact size

#### More information

The RUGGEDCOM Selector assists you in selecting the right RUGGEDCOM products and in configuring variants and is available at:

<http://www.siemens.com/ruggedcom-selector>

### Overview

The RUGGEDCOM RX5000 is an Ethernet routing and switching platform with high connection density for use in harsh environments. These integrated switches and routers can withstand strong electromagnetic interference and radio frequency interference as well as a wide temperature range from -40 °C to +85 °C. The platform was developed for demanding climatic and environmental conditions, such as in power generation and distribution grids as well as in the industrial and military sectors.

### Characteristics

- RUGGEDCOM RX5000:
  - Up to two 10 Gigabit uplinks
  - Up to 26 Gigabit ports
  - Up to 96x 10/100TX copper ports
  - Up to 48x 100 FX optical ports
  - Long-distance fiber-optic connections enable distances up to 90 km
- Power supply
  - Modular, redundant power supplies
  - Universal high voltage ranges: 88-300 V DC or 85-264 V AC
- Reliability in harsh environments
  - EMC and immunity from electrical interference in the high voltage range
  - Exceeds requirements of NEMA TS-2 (traffic control systems)
- Operating temperature -40°C to +85°C (operation without fan)
- Printed-circuit boards with protective coating (optional)

## Network Components

### RUGGEDCOM – Wireless

#### RUGGEDCOM WIN7200

##### Overview

The RUGGEDCOM WIN7200 is a light-weight IEEE 802.16e-compliant wireless broadband base station that has been developed for use in unlicensed and "lightly" licensed or completely licensed frequency bands in harsh environments. The RUGGEDCOM WIN7200 is a light-weight base station with a sector antenna that can be easily mounted on masts, street lamps or walls. It supports subscribers in a stationary or mobile environment. The RUGGEDCOM Win7200, which is singly powered and connected via a single Power over Ethernet (PoE) connection, reduces operating costs and complexity. The RUGGEDCOM WIN7200 system is powered by OFDMA radio technology, which has proven to be robust in adverse channel conditions and enables non-line-of-sight (NLOS) operation. Algorithms for link adjustment, modulation and coding are continuously adapted to the prevailing link conditions for an optimal balance between robustness and efficiency.

##### Characteristics

- Mobile WiMAX-compliant in accordance with IEEE 802.16e and WiMAX Forum Wave 2 (MIMO) certification
- Support of worldwide WiMAX usage in the 2.X-GHz, 3.X-GHz, 4.9-GHz and 5.8-GHz bands
- Adaptive modulation: For optimization of throughput and improvement of performance
- Ecosystem compatibility with all RUGGEDCOM WIN products or 802.16e-compliant WiMAX network equipment
- Large range: Transmission and reception diversity in combination with high output power for improved range and NLOS performance
- High bandwidth: RUGGEDCOM WIN has two integrated wireless units that operate simultaneously on the same frequency (MIMO) for improving the bandwidth (up to 40 Mbps) and spectral efficiency.
- Efficient frequency use: Use of OFDMA technology and integrated GPS so that users can use a complete network on a single frequency channel.
- Usage models: Developed for support of long-distance connections to stationary, portable and mobile end points with simultaneous support of seamless mobility of vehicles and backhaul mode
- Quality of service (QoS): With RUGGEDCOM WIN, users can separate data traffic types by air as well as guarantee latency, minimal bandwidth and jitter according to application requirements.
- Rugged design: RUGGEDCOM WIN features a rugged design and can be used flexibly outdoors. The RUGGEDCOM products have been developed for use in harsh environments, such as are found in power stations, oil refineries, the military sector, roadside traffic control cabinets and metal and mineral processing plants.
- Standalone architecture: Commercial wireless broadband equipment requires the existence of a complete network infrastructure. This includes a special mobile router called an ASN gateway that acts as a central point for all network traffic. This infrastructure can be very costly and complicated to implement. Siemens has developed a mode that requires this comprehensive infrastructure but at the same time retains the interoperability and technological advantages of wireless broadband.
- Secure: RUGGEDCOM WIN is equipped with many integrated functions for assuring compliance with NERC CIP, such as mutual authentication, AES encryption and protection of integrity of messages using CMAC

## Network Components

### RUGGEDCOM – Wireless

#### RUGGEDCOM WIN5100

##### Overview

The RUGGEDCOM WIN5100 is an IEEE 802.16e-compliant wireless broadband subscriber unit that is equipped with external radio frequency connections for stationary or mobile applications in harsh environments. The self-learning subscriber device automatically detects the base station using the best available signal and enables plug-and-play installation and maintenance-free operation. The RUGGEDCOM WIN5100 has external antenna ports and is available with optional 10-30 V DC power input.

##### Characteristics

- Mobile WiMAX-compliant in accordance with IEEE 802.16e and WiMAX Forum Wave 2 profiles
- 2 N-type antenna ports for connection of roof antennas
- Excellent performance in NLOS conditions – insensitive to multipath and deep fade, providing for an extended range and easy installation
- Automatic Transmit Power Control (ATPC) for optimal power system utilization, tight frequency reuse and interference prevention
- Numerous applications and services – guaranteed voice, video and data services based on enhanced quality of service (QoS)
- Rugged hardware supports an operating temperature range from -40 °C to +75 °C
- Developed for mast installation or installation in the vehicle or control cabinet

### RUGGEDCOM – Wireless

#### RUGGEDCOM WIN5200

##### Overview

The RUGGEDCOM WIN5200 is an IEEE 802.16e-compliant wireless broadband subscriber unit that is equipped with an integrated dual-slant directional antenna for harsh environments. The RUGGEDCOM WIN5200 is much simpler to install thanks to LEDs for signal strength alignment, automatic connection to the strongest available base station and automatic service delivery based on authentication data. Specially developed for point-to-multipoint broadband applications with wireless access, the RUGGEDCOM WIN5200 enables efficient use of the wireless frequency spectrum and supports many different applications.

##### Characteristics

- Mobile WiMAX-compliant in accordance with IEEE 802.16e and WiMAX Forum Wave 2 profiles
- Integrated antenna with high strength
- Excellent performance in NLOS conditions – insensitive to multipath and deep fade, providing for an extended range and easy installation
- Automatic Transmit Power Control (ATPC) for optimal power system utilization, tight frequency reuse and interference prevention
- Numerous applications and services – guaranteed voice, video and data services based on enhanced quality of service (QoS)
- Low operating costs due to easy installation and needs-based expansion so that owners can quickly enter new market segments with minimum investment
- Rugged hardware supports an operating temperature range from -40 °C to +75 °C
- Mean time between failures (MTBF) of over 1 million hours
- A single Power over Ethernet (PoE) cable
- Broad frequency band supports worldwide use
- Subscriber unit for outside use

## Network Components

### Notes

## Medium-Voltage Components

9/2 **Vacuum interrupters**

9/3 **3AH47 vacuum circuit breakers**

## Medium-Voltage Components

### Vacuum interrupters

#### Overview

Vacuum switching technology is the preferred technology for medium-voltage applications worldwide, and is therefore state-of-the-art.

Our experience in developing and manufacturing these challenging products dates back over 40 years. The major part relates to the special requirements for railway applications.

Over this period, more than 8 million Siemens interrupters have been installed worldwide.

Close cooperation with our customers enables us to continuously innovate the products and to maintain our quality requirements at the highest possible level.

For this reason, we manufacture the contact material in-house and subject the individual components as well as the complete interrupters to intensive tests before delivery.

We therefore offer:

- High reliability
- Maximum switching capacity
- Leading technology
- Excellent technical support

### Overview

The 3AH47 vacuum circuit breakers are based on the successful 3AH vacuum circuit breaker series which has been well proven in practice in over 500 000 installations.

The 3AH47 vacuum circuit breaker can control up to 60 000 operating cycles depending on the version. With minimum maintenance work, such as greasing of operating mechanisms after 10 000 operating cycles and replacing the interrupters after 30 000 operating cycles, the reliability of these circuit breakers is maintained throughout the entire service life.

10/7	<b>3EB5 surge arresters</b>

# Surge Arresters for Railway Applications

## Introduction

### Overview

#### **Siemens surge arresters for railway applications – particularly reliable, stable and safe overvoltage protection**

Siemens has developed and manufactured medium and high-voltage surge arresters for standard and special applications since 1925. We have been producing surge arresters for railway systems for over 80 years. Continuous research and development, comprehensive know-how and worldwide experience give Siemens surge arresters a leading edge in overvoltage protection. Their uncompromising quality ensures a long service life and reliability in any application.

Siemens surge arresters are an indispensable aid to insulation coordination in electrical power supply systems.

Valuable equipment, such as traction units, is ideally protected against lightning and switching overvoltages.

Siemens surge arresters have been designed to meet the requirements of a wide range of common installation environments, from arctic cold to the heat of the desert and the dampness of tropical climates.

#### **Definition of surge arresters**

Surge arresters are used to protect electrical equipment, such as transformers, circuit breakers and bushings, against the effects of overvoltages caused by incoming surges. Such overvoltages can be caused by a direct or nearby lightning strike, electromagnetic discharges or switching operations in the power supply system as well as in devices. Some overvoltages are very high in energy. The current from the surge is diverted through the arrester, in most cases to ground. Effective overvoltage protection requires that different surge arrester types be used depending on the particular application.

#### **Always the best solution for traction systems**

Electrical power for traction systems is generally transmitted to traction substations of the (national) utility or the railway systems' own high-voltage network by high voltage transmission lines with rated voltages of 110 kV and above at frequencies of 16 2/3 Hz, 25 Hz, 50 Hz or 60 Hz. The voltage is then stepped down to the supply voltage of the traction system and converted into DC voltage where necessary. The high-voltage transmission lines, the traction substations, the catenary system and the traction units are exposed to lightning overvoltages that may result in huge damage to the insulation of the electrical equipment.

Siemens surge arresters for railway applications protect every part of a railway system, from railway substations through transmission lines, cable and catenary systems to rail vehicles for mass-transit, mainline and high-speed transportation up to 420 km/h. Siemens offers several surge arrester product families for AC and DC railway applications up to 45 kV:

- **3EB4** – silicone rubber surge arrester with composite hollow-core enclosure for use on traction units and for fixed installation in AC and DC systems.
- **3EB5** – silicone rubber surge arrester in a cage design for use on traction units and for fixed installation in AC and DC systems.

Siemens provides each of these types in several versions, making it possible to find the ideal surge arrester for any conceivable application and meet even specific demands, such as:

- high mechanical stability to withstand vibrations and high wind speeds,
- extremely reliable pressure relief behavior for use in areas requiring special protection,
- excellent pollution layer characteristics for use in coastal and desert regions or in areas with extreme air pollution.

All Siemens surge arresters feature a superior sealing system that reliably prevents moisture ingress to ensure the highest possible degree of overvoltage protection and decades of trouble-free service. Moreover, the choice of materials used in the production of Siemens surge arresters contributes to protection of the environment.

**The best choice for every application**

Whether it is high-speed, intercity trains between the major cities of the world, train shuttle services from train stations to airports that run every few minutes, or everyday mass transit, the requirements of rail transport vary from one extreme to the other.

Siemens supplies a complete portfolio of surge arresters that meets all the requirements for overvoltage protection of rail vehicles and rail electrification worldwide. Apart from the system voltage, the main criterion for the selection of the appropriate surge arrester is the type of application, which defines travel speed and resulting load.

The 3EB4 and 3EB5 surge arresters are highly suitable for every possible railway application, including:

- High-speed and intercity trains
- Mass transit and regional trains
- Urban public transport: Light rail vehicles, metros, trams, electric buses
- Locomotives
- Drive systems

And for every power supply system, such as:

- 12.5 kV, 25 Hz/60 Hz
- 15 kV, 16 2/3 Hz
- 25 kV, 50 Hz/60 Hz
- 750 V DC
- 1 500 V DC
- 3 000 V DC

**Standards and tests – reliability you really can depend on**

Siemens surge arresters have been designed and tested in compliance with the latest IEC 60099-4, IEEE C62.11 and GB 11032 standards. All type tests are performed by independent, PEHLA-certified laboratories; the test reports are available on request. Please contact your Siemens representative for details.

Moreover, every single surge arrester that leaves the Siemens factory undergoes a routine test and is delivered with a routine test certificate.

Siemens meets all requirements of ISO 9001:2008, ISO 14002:2004 and BS OHSAS 18001:2007. All Siemens suppliers have to be certified according to ISO standards or are audited by Siemens.

To maintain sustainable quality improvement, Siemens introduced corporate quality guidelines that contribute to each step of the quality process.

The 3EB4 and 3EB5 surge arresters comply with the following international standards:

- **IEC 60099-4**, Metal oxide surge arresters for AC systems
- **EN 50526-1**, Railway applications – Fixed installations – D.C. surge arresters and voltage limiting devices
- **EN 45545-2**, Railway applications – Fire protection on railway vehicles
- **IEC 61373**, Railway applications – Rolling stock equipment – Shock and vibration tests

## Surge Arresters for Railway Applications

### 3EB4 surge arresters

#### Overview

#### **3EB4 – silicone rubber surge arrester with composite hollow core design**

#### **Reliable and safe – 3EB4 railway surge arresters**

3EB4 type railway surge arresters have to withstand a great deal, including the influence of extreme weather conditions, temperatures from  $-40\text{ °C}$  to  $+70\text{ °C}$  and the effects of UV radiation and hydrophobicity. They have been designed for precisely this, and are effectively protected with suitable fault-tolerant technology and durable materials to ensure trouble-free operation under all conditions of use.

Within the composite housing, the arrester's enclosure materials consist of silicone and glass-fiber reinforced plastic (GFRP). The silicone, which is directly applied onto the GFRP tube in an injection molding process, ensures reliability and an excellent special seal at both ends of the surge arrester effectively prevents partial discharges and moisture ingress, guaranteeing decades of trouble-free operation. The combination of silicone and a glass-fiber-reinforced plastic tube also ensures excellent mechanical resilience of the design.

The 3EB4 surge arrester enclosure is designed for extreme mechanical loads and it is ideally suited for high speeds up to 420 km/h (260 mph).

The silicone arrester with composite hollow core enclosure design provides a very high degree of safety: In the case of an overload or the extremely rare case of an arrester short circuit, the arc escapes directly through a directional pressure relief device. The surge arrester, therefore, can be installed in a way that will minimize the risk of any damage to the equipment and passengers nearby. Internal parts are not ejected and the shatter-proof housing remains intact.

#### **A reliable, rugged and economical choice**

Siemens 3EB4 composite hollow core design surge arresters are virtually indestructible during transportation, installation, storms, and vandalism. While the composite hollow core enclosure design provides the highest possible mechanical strength, the silicone rubber insulation is ideal for outdoor applications in severe environmental conditions. No matter how tough environmental and operating conditions may be, 3EB4 arresters assure 100% reliable pressure relief performance and provide the ultimate in protection.

## Overview

### 3EB5 silicone rubber surge arrester in a cage design

Siemens 3EB5 surge arresters in a cage design offer excellent protection from overvoltage in railway applications.

The metal oxide varistors (MOVs) are encased in a cage of rods made out of glass-fiber-reinforced plastic (FRP), which produces a rigid, reinforced construction.

Reliability is ensured by directly injecting the silicone onto the MO varistors and the FRP rods. This ensures complete embedding of all components without entrapment and gaps, and thus excellent sealing against partial discharges or the ingress of moisture.

In the extremely rare case of an MOV overload, arcing does not produce any critical pressure in the interior because the MOV elements are not situated in a sealed mechanical enclosure. The arc can escape directly through the soft silicone housing, without damaging the mechanical enclosure support. The ejection of internal parts that could damage other nearby equipment is prevented almost completely. The innovative cage design from Siemens ensures an excellent safety response.

The silicone is highly hydrophobic and retains its water and dirt-repellent effect throughout its use. This results in high tracking and erosion resistance. The silicone enclosure is self-extinguishing and flame-retardant. These advantages ensure maintenance-free and reliable use of 3EB5 surge arresters.

### SITRAIN – Digital Industry Academy

#### Introduction

#### **The Future of Learning starts now**

Globalization, digitalization, new work, Internet of Things, new business models – our way of working, living and learning is changing rapidly. With SITRAIN, the future of learning begins today: SITRAIN stands for a modern learning culture that focuses on the needs of learners and the demands of innovative companies.

With SITRAIN – Digital Industry Academy, the future of learning is yours.

Face-to-face training or digital training, location-independent, 24/7, on-demand or learning at fixed dates and course times? With a personal learning consultant, in a team, or on your own responsibility? Everything is possible. SITRAIN offers a wide range of different learning options with the "Learning Journey", "Learning Membership" and "Learning Event".

#### **The three learning formats of SITRAIN – Digital Industry Academy**

##### **Learning Journey**

The combination for sustainable learning success

- The optimal mix of self-study units and guided live modules
- Includes a Learning Membership to work through the self-study modules and access on-demand content
- The SITRAIN learning consultant is available for questions and one-on-one consultations
- Ideal integration into the daily work routine and adaptation to one's own learning pace.

##### **Learning Membership**

Securing knowledge through continuous learning on your own responsibility

- With access to the comprehensive and constantly growing range of self-study units on SITRAIN access, the digital learning platform
- Search and find specific learning content or simply have a look around – anytime and anywhere
- A modern learning culture through continuous learning on your own responsibility and transparency about your learning success in the team or company.

##### **Learning Event**

Acquire theoretical and practical knowledge in a compact and guided format

- You achieve a defined learning goal in the shortest possible time
- The learning consultant guides you through the practical exercises and is also exclusively available to you during the theoretical sessions for the entire duration
- Focused learning, outside of the daily work routine, in a protected learning environment – virtually, in the training center, or at your company.

## Introduction

### **Expand your knowledge, apply what you have learned, develop future skills**

The SITRAIN Digital Industry Academy combines didactically effective methods and modular options.

Effective

Flexible

Relevant

Continuous

### **The four building blocks of SITRAIN – Digital Industry Academy**

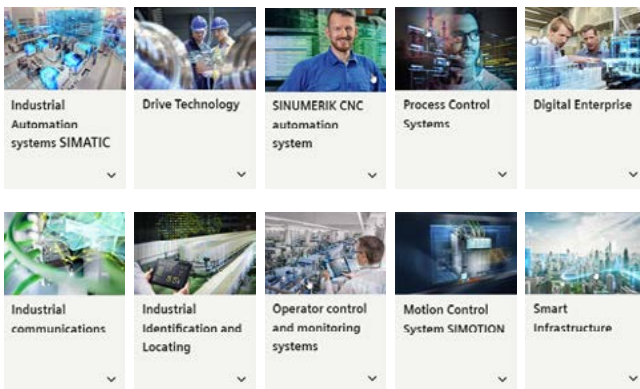

Different methods for maximum learning success:

- Live
- On your own responsibility
- On demand
- Individual

Learn the way you want to learn. For learning success that takes you further.

### **Education and training directly from the manufacturer**

For individual knowledge building, the following topics concerning the industrial product and solution portfolio of Siemens are available. Experience the new learning culture with SITRAIN.

### **Training cases catalog**

## Appendix

### Logistics

#### Overview

##### General

With regard to delivery service, communications and environmental protection, our logistics service ensures "quality from the moment of ordering right through to delivery". By designing our infrastructure according to customer requirements and implementing electronic order processing, we have successfully optimized our logistics processes.

Our delivery processes are designed such that, as a rule, a confirmed deadline is not generally exceeded. In fact, wherever possible, we aim to deliver up to three working days ahead of schedule to optimize the overall delivery situation (e.g. in anticipation of holidays and peak order periods).

We are proud of our personal consulting service, on-time deliveries and one-day delivery within Germany.

**To achieve this, we supply the preferred types marked with ► ex warehouse.**

We regard the ISO 9001 certification and consistent quality checks as an integral part of our services.

Electronic order processing is fast, cost-efficient and error-free. Please contact us if you want to benefit from these advantages.

##### Packaging, packing units

The packaging in which our equipment is dispatched provides protection against dust and mechanical damage during transport, thus ensuring that you receive our products in a perfect state.

We select our packaging for maximum environmental compatibility and reusability (e.g. crumpled paper for protection during transport in packages up to 32 kg) and, in particular, with a view to reducing waste.

With our multi-unit packaging and reusable packaging, we offer you specific types of packaging that are both kind to the environment and tailored to your requirements.

##### Your advantages at a glance:

- Lower order costs
- Cost savings through uniform-type packaging: low/no disposal costs
- Reduced time and cost thanks to short unpacking times
- "Just-in-time" delivery directly to the production line helps reduce stock: cost savings through reduction of storage area
- Fast assembly thanks to supply in sets
- Standard Euro boxes – corresponding to the Euro pallet modular system – suitable for most conveyor systems
- Active contribution to environmental protection

Unless stated otherwise in the "Selection and ordering data" of this catalog, our products are supplied individually packed.

For small parts/accessories, we offer you economical packing units as standard packs containing more than one item, e.g. 5, 10, 50 or 100 units. It is essential that whole number multiples of these quantities be ordered to ensure satisfactory quality of the products and problem-free order processing.

The products are delivered in a neutral carton. The label includes warning notices, the CE mark and product description information in English and German.

In addition to the Article No. (MLFB) and the packed number of items in the packaging the Instr. Order No. is also specified for the operating instructions. It can be obtained from your local Siemens representative (you will find a list of your local Siemens contacts at [www.siemens.com/automation-contact](http://www.siemens.com/automation-contact)).

The device Article No. of most devices can also be acquired through the EAN barcode to simplify ordering and storage logistics.

The related master data are available from your local Siemens representative.

### Multi-unit and reusable packaging

The devices listed in the tables from page 11/6 onwards can be ordered in multi-unit or reusable packaging (further versions on request).

If ordering multi-unit or reusable packaging for the first time, please first consult your local Siemens representative with regard to pack type, quantity, delivery time and the precise order designation. Use of the reusable packaging is reserved solely for customers that have signed a packaging return agreement with their Siemens representative in advance.

Multi-unit and reusable packaging is not available as a pack type for all products. Some products are unsuited for this pack type and would only involve an increased risk of damage in transit.

For both pack types, the quantity of devices ordered (per Article No.) must be divisible by the pack quantity. If this is not the case, the electronic order processing system rounds up to the next integer multiple of packaging.

#### Multi-unit packaging

Products in a quantity sufficient to fill a multi-unit packaging: 1/2 (W96) and 1/4 (W97) ENK

As standard, multi-unit packs contain uniform-type, unpacked individual products (one device type) in an appropriately sized carton made of recyclable cardboard. The products of the SIRIUS range can be ordered in units of 1/1, 1/2, 1/4 and 1/8 standard Euro boxes (ENK).

### Reusable packaging (uniform type)

Standard Euro box (ENK) made of durable molded plastic with foam inserts

Standard reusable packaging contains uniform-type, non-packed individual products (one device type) in a reusable standard Euro box (ENK) made of durable molded plastic with foam inserts for protection during transport.

The standard Euro box (ENK) also serves as transport packaging. The reusable packaging (ENK) plus foam inserts are returned by the customer (free of charge) to the supply base.

Please contact your Siemens representative to clarify the delivery details or conditions for set supply or delivery in reusable packaging (ENK) (to find Siemens representatives, see [www.siemens.com/automation-contact](http://www.siemens.com/automation-contact)). Suitable arrangements will then be agreed with you.

#### Set deliveries (reusable, different devices)

On request, we also deliver order-related packs of larger quantities of different types of devices in a standard Euro box (ENK).

Please contact your Siemens representative to clarify the delivery details or conditions for set supply or delivery in reusable packaging. Suitable arrangements will then be agreed with you.

#### Packaging dimensions

Packing material	Length mm	Height mm	Width mm
ENK	596	219	396
W95	575	190	375
W96	375	190	290
W97	290	190	195
W98	290	100	195

## Appendix

When ordering products in multi-unit packaging for devices from the SIRIUS range, the Article No. of the product concerned must be supplemented with "**-Z**" and, in addition, the order code **W9**.

Ordering example:  
3RT2015-1AB02-Z W97 → Packed number of items: 40

For products packed in reusable packaging, the Article No. must be supplemented with "**-Z**" and the order code **X95**.

Ordering example:  
3RT2018-1AB01-Z X95 → Packed number of items: 144

## SIRIUS ACT

Multi-unit packaging with order code X90

Pushbuttons and indicator lights	Multi-unit or quantity per pack X90
Complete units (3SU11)	20
Compact units (3SU12)	
• Acoustic signaling devices, pushbuttons with extended stroke, potentiometers	50
Actuating and signaling elements (3SU10)	
• Pushbuttons, illuminated pushbuttons, indicator lights	100
• Stop switches, twin pushbuttons, mushroom pushbuttons 30/40 mm, EMERGENCY STOP mushroom pushbuttons 30/40 mm, toggle switches, selector switches, key-operated switches, ID key-operated switches, coordinate switches	50
• Mushroom pushbuttons 60 mm, EMERGENCY STOP mushroom pushbuttons 60 mm	40
Holders without module (3SU15)	100
Modules for actuators and indicators (3SU14)	
• Contact modules	150
• LED modules	50
Enclosures (3SU18)	
• Empty plastic enclosures	
- 3SU1801-0AA00-0AA2, 3SU1801-0AA00-0AB1	24
- 3SU1801-0AA00-0AC2	18
Accessories (3SU19)	
• Sealing plugs, label holders, EMERGENCY STOP backing plates, labeling plates for potentiometers, EMERGENCY STOP labeling plates for enclosures without recesses and without inscription, single frames, dust caps for key-operated switches, adapters for mounting on standard rails, protective collars for EMERGENCY STOP mushroom pushbuttons (40 mm, for 5 padlocks, yellow)	100
• Labeling plates	150

When ordering products in multi-unit packaging for devices from the SIRIUS ACT range, the Article No. of the product concerned must be supplemented with **"-Z"** and, in addition, the order code **X90**.

Ordering example:  
3SU1000-0AB20-0AA0-Z X90;  
pack of 100 (1 pack = 100 units)

Multi-unit packaging with order code X05

Pushbuttons and indicator lights	Multi-unit or quantity per pack X05
Holders without module (3SU15)	
• Plastic: 3SU1500-0AA10-0AA0	5
• Metal: 3SU1510-0AA10-0AA0	5
• Universal for plastic and metal: 3SU1550-0AA10-0AA0	5
Modules for actuators and indicators (3SU14)	
• Contact modules for front plate mounting	5
- Screw terminals: 3SU1400-1AA10-1BA0, 3SU1400-1AA10-1CA0	
- Spring-loaded terminals: 3SU1400-1AA10-3BA0, 3SU1400-1AA10-3CA0	
• LED modules for front plate mounting	5
- Screw terminals: 3SU1401-1BB00-1AA0, 3SU1401-1BB20-1AA0, 3SU1401-1BB30-1AA0, 3SU1401-1BB40-1AA0, 3SU1401-1BB50-1AA0, 3SU1401-1BB60-1AA0	
- Spring-loaded terminals: 3SU1401-1BB00-3AA0, 3SU1401-1BB20-3AA0, 3SU1401-1BB30-3AA0, 3SU1401-1BB40-3AA0, 3SU1401-1BB50-3AA0, 3SU1401-1BB60-3AA0	
• LED modules for base mounting	5
- Screw terminals: 3SU1401-2BB00-1AA0, 3SU1401-2BB20-1AA0, 3SU1401-2BB30-1AA0, 3SU1401-2BB40-1AA0, 3SU1401-2BB50-1AA0, 3SU1401-2BB60-1AA0	
- Spring-loaded terminals: 3SU1401-2BB00-3AA0, 3SU1401-2BB20-3AA0, 3SU1401-2BB30-3AA0, 3SU1401-2BB40-3AA0, 3SU1401-2BB50-3AA0, 3SU1401-2BB60-3AA0	

When ordering products in multi-unit packaging for devices from the SIRIUS ACT range, the Article No. of the product concerned must be supplemented with **"-Z"** and, in addition, the order code **X05** must be specified.

Ordering example:  
3SU1500-0AA10-0AA0-Z X05;  
pack of 5 (1 pack = 5 units)

## Appendix

### Standards and approvals

#### Approvals, test certificates, characteristic curves

An overview of the certificates available for Industrial Control products along with more technical documentation can be consulted daily on the internet at:

[www.siemens.com/sirius/approvals](http://www.siemens.com/sirius/approvals)

Product support: Approvals/certificates

Product support: Characteristics

#### Safety characteristics

In the following standards, the so-called B10 values for calculating the safety integrity or safety integrity level (SIL) in functional safety at a high or continuous demand rate are required also for electromechanical switchgear:

- IEC 62061 "Safety of machines – Functional safety of safety-related electrical, electronic and programmable electronic control systems",
- ISO 13849-1 "Safety of machines – Safety-related components of controls – Part 1: General principles".

Failure rates of electromechanical components are required for calculating the safety integrity or safety integrity level (SIL) in functional safety:

- in the manufacturing industry at a high demand rate
- in the process industry at a low demand rate

Further requirements are laid down in IEC 61511-1 "Functional safety – Safety instrumented systems for the process industry sector – Part 1: Framework, definitions, system, hardware and software requirements".

The German versions of the above standards are:

- DIN EN 62061
- DIN EN ISO 13849
- DIN EN 61511-1

The Safety Evaluation in the TIA Selection Tool assists in calculating the safety functions as verification for the machine documentation. It is available free of charge at [www.siemens.com/safety-evaluation](http://www.siemens.com/safety-evaluation).

More information such as notes on trainings and Safety Consulting as well as application examples with calculations are available at [www.siemens.com/safety-integrated](http://www.siemens.com/safety-integrated).

#### Definitions

$\lambda(t) dt$  is the probability that a unit which has not failed by a certain time  $t$  will fail in the following interval  $(t; t + dt)$ . Failure rates have the dimension 1/time unit, e.g. 1/h. Failure rates for components are often specified in FIT (failures in time unit): 1 FIT equals  $10^{-9}/h$ . From the failure rate it is possible to derive a (mathematical) distribution function of the failure probability:

$F(t) = 1 - \exp(-\lambda t)$ , with  $\lambda$  as constant failure rate

- The mean value of this exponential distribution is also referred to as:
  - Mean Time To Failure (MTTF) in the case of irreparable components; 63.2% of components fail by the MTTF.
  - Mean Operating Time Between Failures (MTBF) in the case of repairable components.
- $MTTF = 1/\lambda$   
(MTTF is a statistical mean value but no guarantee for endurance).

Electromechanical components are often irreparable components. In general, the failure rate of monitored units changes with age.

The B10 value for devices subject to wear is expressed in number of operating cycles:

- It is the number of operating cycles after which 10% of the test specimens fail in the course of an endurance test (or: The number of operating cycles after which 10% of the devices have failed).

For low demand rates (mainly in the process industry), the failure rate and not the B10 value is used to determine the failure probability.

The safety characteristics of electromechanical SIRIUS products can be found at <https://support.industry.siemens.com/cs/ww/en/view/109739348> or in the SIEMENS Industry Online Support Portal ([www.siemens.com/online-support](http://www.siemens.com/online-support)) under the Entry ID: 109739348.

#### Approval requirements valid in different countries

Siemens low-voltage switchgear and controlgear are designed, manufactured and tested according to the relevant German standards (DIN and VDE), IEC publications and European standards (EN) as well as CSA and UL standards. The standards assigned to the single devices are stated in the relevant parts of this catalog.

As far as is economically viable, the requirements of the various standards valid in other countries are also taken into account in the design of the equipment.

In some countries an approval is required for certain low-voltage switchgear and controlgear components (see table below).

Depending on the market requirements, these components have been submitted for approval to the authorized testing institutes.

In some cases, CSA for Canada and UL for the USA only approve special switchgear versions. Such special versions are listed separately from the standard versions in the individual parts of this catalog.

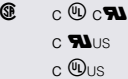

For this equipment, partial limitations of the maximum permissible voltages, currents and ratings can be imposed, or special approval and, in some cases, special identification is required.

For use on board ship, the specifications of the marine classification societies must be observed (see table on page 11/11). In some cases, they require type tests of the components to be approved.

The Chinese certification system has changed. As of November 1, 2020, the self-declaration by Siemens (Self-Declaration of Compliance (SDOC)) forms the basis of CCC and the import to China. The CCC scope, product labeling, certification procedures, implementation rules in manufacturing and regulations regarding the import to China have remained unchanged. All CCC certificates issued by CQC have been transferred to SDOCs and all CCC certificates issued by CQC are invalid as of November 1, 2020.

UKCA: As of January 1, 2023, all devices to be marketed in Great Britain require a manufacturer's declaration (UK Declaration of Conformity) and must be supplied with a UKCA mark. The declaration is based on UK regulations and the underlying British standards (BS). Alternatively, EN standards can also be applied. Otherwise, the same requirements apply as for the EU Declaration of Conformity.

#### Testing bodies, approval identification and approval requirements

Country	Canada	USA	China	Russia/Belarus/Kazakhstan/...
<b>Government-appointed or private, officially recognized testing bodies</b>	CSA UL (USA)	UL	Self-Declaration of Compliance (Siemens)	Official national regulation/TR
<b>Mark of conformity</b>				
<b>Approval requirement</b>	+	+	+	+
<b>Remarks</b>	UL and CSA are authorized to grant approval certificates in accordance with Canadian and North American regulations. Please note: These approvals are not recognized in many cases and must be covered by additional approvals issued by the national testing agency.		--	Eurasian customs union

For more information about the approval marks, see page 11/13.

**Marine classification societies**

Country	Germany Norway	United Kingdom	France	CIS	Italy	Poland	USA
<b>Name</b>	DNV	Lloyds Register of Shipping	Bureau Veritas	Russian Maritime Register of Shipping	Registro Italiano Navale	Polski Rejestr Statków	American Bureau of Shipping
<b>Codes</b>	DNV	LR	BV	RS	RINA	PRS	ABS

**CE marking**

Manufacturers of products which fall within the subject area to which EU directives apply must identify their products, operating instructions or packaging with a CE mark of conformity.

By attaching the CE marking, the manufacturer confirms that the product conforms to the relevant basic requirements of all directives applicable to the product. The mark of conformity is a mandatory requirement for putting products into circulation throughout the EU.

All the products in this catalog are in conformance with the relevant specific EU directives and bear the CE mark of conformity **CE**.

- Low-voltage directive
- EMC directive
- Machinery directive
- ATEX directive
- RED directive
- RoHS directive

**Accident prevention**

Test certificates and approvals from DGUV, SUVA (Swiss institute for accident prevention), TÜV or VDE are available for some devices in safety control systems. For details, [see the respective product descriptions](#).

## Appendix

### Standards and approvals

#### Ex protection certificates for SIRIUS controls

Controls that are installed in a potentially explosive atmosphere or motor protection devices that protect a motor installed in a potentially explosive atmosphere against overloading or a pump in said atmosphere from dry running must comply with certain special requirements. These requirements are laid down in the following standards:

- EN 50495
- EN 60079-0
- EN 60079-1
- EN 60079-7
- EN 60079-11
- EN 60079-14
- EN 60079-17
- EN 60079-31
- EN 60947-1
- EN 60947-4-1
- EN 60947-4-2
- EN 60947-5-1
- EN 60947-8
- EN ISO/IEC 80079-34
- EN ISO 80079-36
- EN ISO 80079-37

#### Certification

Controls and motor protection devices that are brought into circulation within the member states of the EU in accordance with EU directive 2014/34/EU must have been constructed and tested according to the above-mentioned standards and must have a declaration of conformity from the manufacturer based on a prototype test certificate.

The quality management (QM) system of the manufacturer is subject to certain requirements and a "QM certificate" must be obtained for the manufacturer from a recognized authority.

#### Certification of the QM system

A certificate of approval for quality assurance production has been issued by DEKRA Testing and Certification GmbH<sup>1)</sup> under the number BVS 20 ATEX ZQS/E111 according to Directive 2014/34/EU. The quality management (QM) system is also checked within the scope of the IECEx Scheme. Conformity with the requirements is confirmed using document DE/BVS/QAR15.0002/08.

These certificates are valid for equipment groups I and II and categories M2 and 2: Safety and control devices for electrical equipment.

#### Certificates

Declarations of conformity and prototype test certificates are available at [www.siemens.com/online-support](http://www.siemens.com/online-support) for viewing and downloading. As far as explosion protection is concerned, these are available for the following products:

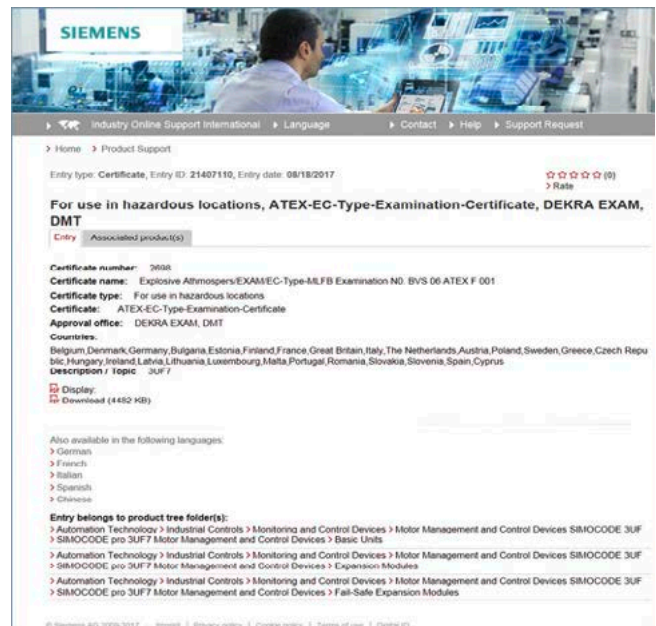

- 3RB, 3RM, 3RN, 3RU, 3RV, 3RW, 3UF motor protection devices
- 3RS2 temperature monitoring relays
- 3SU1 LED modules

You can find more information about industrial controls for applications in explosion-protected areas at [www.siemens.com/sirius/atex](http://www.siemens.com/sirius/atex).

<sup>1)</sup> DEKRA Testing and Certification GmbH  
The certification authority of "DEKRA Testing and Certification GmbH" with authority number 0158 according to Article 13 of Directive 2014/34/EU of the European Parliament and Council certifies that Siemens Amberg, Cham, Suzhou and Trutnov maintains a quality assurance system for production that satisfies Appendices IV and VII of this Directive.

Selection box

Description of certificate with view and download option

#### Identifying markings

All equipment must be marked according to the ATEX guideline. The ATEX identification code contains the equipment group, the approved environment, the number of the certification authority and other technical data that was determined from the type test.

### Certificate of the AS-International Association for AS-Interface products

AS-Interface products are tested and certified by the AS-International Association. The products have been tested in an accredited test laboratory according to testing guidelines.

### Special standards for the USA and Canada

In the USA and Canada, for machine tools and processing machines in particular, supply lines are laid using rubber insulated cable enclosed in heavy-duty steel piping similar to that used for gas or water pipe systems.

The tubing system must be completely watertight and electrically conductive (especially sleeving and elbows). Since the tubing system can also be grounded, the cable entries of enclosed units equipped with heavy-gauge or metric threads must be fitted with metal adapters between these threads and the tube thread. The necessary adapters are specified for the switchgear as accessories; they should be ordered separately unless otherwise specified.

Low-voltage switchgear and controlgear for auxiliary circuits (e.g. contactor relays, commanding and signaling devices and auxiliary switches/auxiliary contacts in general) are generally only approved by CSA and UL for "**Heavy Duty**" or "**Standard Duty**" and are identified either with these specifications in addition to the maximum permissible voltage or by using an abbreviation.

The abbreviations are harmonized with IEC 60947-5-1 Annex 1 Table A.1 and correspond to the stated utilization categories.

For various switching devices detailed in the catalog, a note has been included to the effect that, above a certain voltage, the auxiliary switches/auxiliary contacts can only be used if they have the same polarity. This means that the input terminals can only be connected to the same pole of the control voltage, e.g. "600 V AC above 300 V AC same polarity".

### Distinguishing features of UL approvals (for USA and Canada)

Recognized Component	Listed Product
Devices are identified on the rating plate using the "UL recognition mark": USA:  c  us Canada: c   us	Devices are identified using the "UL listing mark" on the rating plate e.g. USA:  LISTED XXX      Canada: c  LISTED XXX IND. CONT. EQ.      IND. CONT. EQ. (XXX stands for: UL Code Classification Number)
Devices are approved as modules for "factory wiring" or other conditions of acceptability, i.e.: As devices for installation in control systems, which are selected, installed, wired and tested entirely by trained personnel in factories, workshops or elsewhere, <b>according to the operating conditions</b> .	Devices are approved for "field wiring", i.e.: <ul style="list-style-type: none"> <li>As devices for installation in control systems, which are completely wired by trained personnel in factories, workshops or elsewhere.</li> <li>As single devices for sale in retail outlets in the USA/Canada.</li> </ul>
If devices are  or c  approved as "listed products", they are also approved as  or c  "recognized components".	

For more information about UL and CSA, [see page 11/10](#).

### Special standards for Russia, Australia and China

#### EAC approval for Russia/Belarus/Kazakhstan/...

EAC mark

Since February 15, 2013, Russia, Kazakhstan, Belarus and other countries have been united in the Eurasian EAC customs union. An EAC approval as replacement for the GOST mark is required for all products that are to be sold in Russia.

All devices delivered to the customs union must have these customs certifications.

#### RCM approval for Australia

RCM mark

The RCM mark is required for marketing Siemens electronic devices in Australia. Electronic devices must provide proof of EMC clearance in Australia, similar to the CE mark of conformity laid down by the EMC directive applicable in the EU and bear the "RCM" mark.

## Appendix

### Quality management

#### Quality management

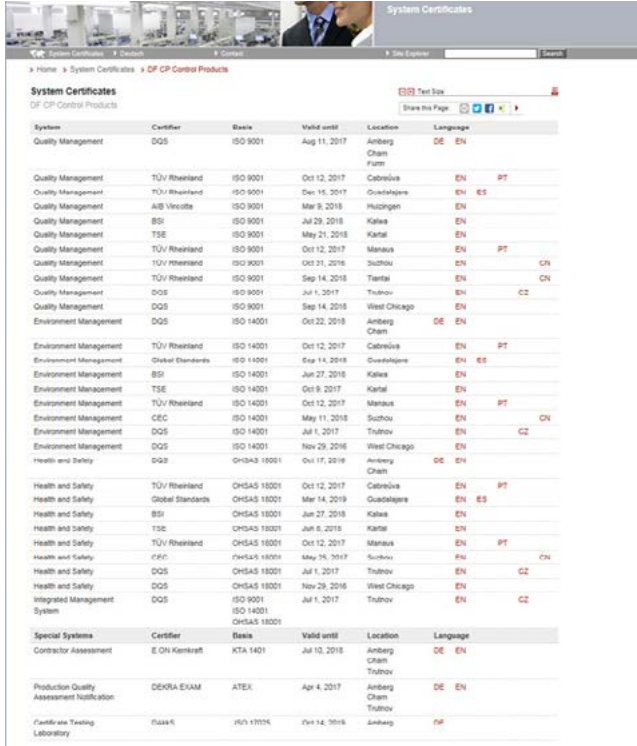

The quality management system of our "Electrical Products" Business Unit in the "Smart Infrastructure" business complies with the international standard EN ISO 9001.

The products and systems described in this catalog are developed, manufactured and sold under application of a certified quality management system according to ISO 9001.

#### Certificates

For information about available certifications of the quality management system for Industrial Controls products, please visit website address:

### Partners at Siemens

#### Siemens Partner Program

##### Overview

#### **Siemens Solution and Approved Partner – Partners for your success**

#### Highest competence in automation and drive technology

Siemens works closely together with selected partner companies around the world in order to ensure that customer requirements for all aspects of automation and drives are fulfilled as best as possible – wherever you are, and whatever the time.

We place great value on our customers acting in accordance with the same ideals which characterize Siemens as a whole: Competence, professionalism and quality. That is why continuous development through qualification and certification measures in line with global standards is a central aspect of our Partner Program. This means that with our partners, you benefit from the same high quality standards all over the world. The partner emblem is the symbol for tried and tested quality.

#### The partner network for industry

The Siemens Partner Program offers you expertise and experience close at hand.

Within our global network, we distinguish between Solution Partners and Approved Partners. We currently work with more than 1,500 Solution Partners around the world. Our network of over 150 Approved Partners continues to grow. In more than 80 countries worldwide.

#### Siemens Solution Partner – Automation Drives

At present we are working with more than 1,500 Solution Partners worldwide. They are characterized by extensive application, system and sector knowledge, as well as proven project experience, and are able to implement future-proof tailored solutions of the highest quality, based on our product and system portfolio.

#### Siemens Approved Partner – Value Added Reseller

With their detailed technical knowledge, Siemens Approved Partners – Value Added Resellers offer a combination of products and services that range from specialist technologies and customized modifications to the provision of high-quality system and product packages. They also provide qualified technical support and assistance.

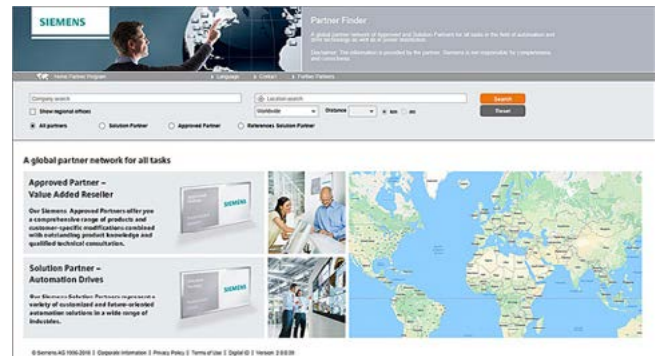

#### Siemens Approved Partner – Industry Services

Siemens Approved Partner – Industry Services put their unique expertise entirely at the service of enhancing your productivity and can be instrumental in ensuring the availability of your plants.

#### **Partner Finder**

The ideal partner for your task is just a mouse click away!

In the Siemens global Solution Partner Program, customers are certain to find the optimum partner for their specific requirements – with no great effort. The Partner Finder is basically a comprehensive database that showcases the profiles of all our partners.

#### Easy selection:

Set filters in the search screen form according to the criteria that are relevant to you. You can also directly enter the name of an existing partner.

#### Skills at a glance:

Gain a quick insight into the specific competencies of any particular partner with the reference reports.

#### Direct contact option:

Use our electronic query form:

[www.siemens.com/partnerfinder](http://www.siemens.com/partnerfinder)

Additional information of the Siemens Partners for industry is available online at:

[www.siemens.com/partnerprogram](http://www.siemens.com/partnerprogram)

## Overview

**Keep your business running and shaping your digital future – with Industry Services**

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier. We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt. Of course, we take care that your production is protected against cyber threats. We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer lifespan.

You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

[www.siemens.com/industryservices](http://www.siemens.com/industryservices)

## Appendix

### Industry Services – Portfolio overview

#### Overview

#### Digital Industry Services

Digital Industry Services make your industrial processes transparent to gain improvements in productivity, asset availability, and energy efficiency.

Production data is generated, filtered and translated with intelligent analytics to enhance decision-making.

This is done whilst taking data security into consideration and with continuous protection against cyber-attack threats.

[www.siemens.com/global/en/products/services/industry/digital-industry-services.html](https://www.siemens.com/global/en/products/services/industry/digital-industry-services.html)

#### Training Services

From the basics and advanced to specialist skills, SITRAIN courses provide expertise right from the manufacturer – and encompass the entire spectrum of Siemens products and systems for the industry.

Worldwide, SITRAIN courses are available wherever you need a training course in more than 170 locations in over 60 countries.

<https://support.industry.siemens.com/cs/ww/en/sc/2226>

#### Support and Consulting Services

**Industry Online Support** site for comprehensive information, application examples, FAQs and support requests.

**Technical and Engineering Support** for advice and answers for all inquiries about functionality, handling, and fault clearance. The Service Card as prepaid support for value added services such as Priority Call Back or Extended Support offers the clear advantage of quick and easy purchasing.

**Information & Consulting Services**, e.g. SIMATIC System Audit; clarity about the state and service capability of your automation system or Lifecycle Information Services; transparency on the lifecycle of the products in your plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2235>

#### Spare Parts

Spare Parts Services are available worldwide for smooth and fast supply of spare parts – and thus optimal plant availability. Genuine spare parts are available for up to ten years. Logistic experts take care of procurement, transport, custom clearance, storage and order management.

Reliable logistics processes ensure that components reach their destination as needed.

Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer's premises with optimized **Spare Parts Packages** for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.

**Asset Optimization Services** help you design a strategy for parts supply where your investment and carrying costs are reduced and the risk of obsolescence is avoided.

<https://support.industry.siemens.com/cs/ww/en/sc/2110>

#### Repair Services

Repair Services are offered on-site and in regional repair centers for fast restoration of faulty devices' functionality.

Also available are extended repair services, which include additional diagnostic and repair measures, as well as emergency services.

<https://support.industry.siemens.com/cs/ww/en/sc/2154>

#### Field and Maintenance Services

Siemens specialists are available globally to provide expert field and maintenance services, including commissioning, functional testing, preventive maintenance and fault clearance.

All services can be included in customized service agreements with defined reaction times or fixed maintenance intervals.

<https://support.industry.siemens.com/cs/ww/en/sc/2265>

#### Retrofit and Modernization Services

Provide a cost-effective solution for the expansion of entire plants, optimization of systems or upgrading existing products to the latest technology and software, e.g. migration services for automation systems.

Service experts support projects from planning through commissioning and, if desired over the entire extended lifespan, e.g. Retrofit for Integrated Drive Systems for an extended lifetime of your machines and plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2286>

#### Service Programs and Agreements

A technical Service Program or Agreement enables you to easily bundle a wide range of services into a single annual or multi-year agreement.

You pick the services you need to match your unique requirements or fill gaps in your organization's maintenance capabilities.

Programs and agreements can be customized as KPI-based and/or performance-based contracts.

<https://support.industry.siemens.com/cs/ww/en/sc/2275>

## Online Support for Siemens Products for Industry

Siemens Industry and Online Support with some 1.7 million visitors per month is one of the most popular web services provided by Siemens. It is the central access point for comprehensive technical know-how about products, systems and services for automation and drives applications as well as for process industries.

In connection with the challenges and opportunities related to digitalization you can look forward to continued support with innovative offerings.

## Appendix

### Software licenses

#### Overview

##### **Software types**

Software requiring a license is categorized into types. The following software types have been defined:

- Engineering software
- Runtime software

##### **Engineering software**

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing.

Data generated with engineering software and executable programs can be duplicated for your own use or for use by third-parties free-of-charge.

##### **Runtime software**

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc.

The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge.

You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc.

Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of supply can be found in the readme file supplied with the relevant product(s).

##### **License types**

Siemens Industry Automation & Drive Technologies offers various types of software license:

- Floating license
- Single license
- Rental license
- Rental floating license
- Trial license
- Demo license
- Demo floating license

##### **Floating license**

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed. The concurrent user is the person using the program. Use begins when the software is started. A license is required for each concurrent user.

##### **Single license**

Unlike the floating license, a single license permits only one installation of the software per license.

The type of use licensed is specified in the ordering data and in the Certificate of License (CoL). Types of use include for example per instance, per axis, per channel, etc.

One single license is required for each type of use defined.

##### **Rental license**

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific period of time (the operating hours do not have to be consecutive).

One license is required for each installation of the software.

##### **Rental floating license**

The rental floating license corresponds to the rental license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

##### **Trial license**

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes. It can be transferred to another license.

##### **Demo license**

The demo license support the "sporadic use" of engineering software in a non-productive context, for example, use for testing and evaluation purposes. It can be transferred to another license. After the installation of the license key, the software can be operated for a specific period of time, whereby usage can be interrupted as often as required.

One license is required per installation of the software.

##### **Demo floating license**

The demo floating license corresponds to the demo license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

##### **Certificate of License (CoL)**

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

##### **Downgrading**

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

##### **Delivery versions**

Software is constantly being updated. The following delivery versions

- PowerPack
- Upgrade

can be used to access updates.

Existing bug fixes are supplied with the ServicePack version.

##### **PowerPack**

PowerPacks can be used to upgrade to more powerful software. The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed.

A separate PowerPack must be purchased for each original license of the software to be replaced.

##### **Upgrade**

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.

The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.

A separate upgrade must be purchased for each original license of the software to be upgraded.

**Overview****ServicePack**

ServicePacks are used to debug existing products. ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

**License key**

Siemens Industry Automation & Drive Technologies supplies software products with and without license keys.

The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).

The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

**Software Update Service (SUS)**

As part of the SUS contract, all software updates for the respective product are made available to you free of charge for a period of one year from the invoice date. The contract will automatically be extended for one year if it is not canceled three months before it expires.

The possession of the current version of the respective software is a basic condition for entering into an SUS contract.

You can download explanations concerning license conditions from [https://mall.industry.siemens.com/legal/ww/en/terms\\_of\\_trade\\_en.pdf](https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf)

## Appendix

### Conditions of sale and delivery

#### 1. General Provisions

By using this catalog you can purchase products (hardware, software and services) described therein from Siemens Aktiengesellschaft subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

##### 1.1 For customers with a seat or registered office in European Union

For customers with a seat or registered office in European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for stand-alone software products and software products forming a part of a product or project, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office in Germany"<sup>1)</sup> and/or
- for consulting services the "Allgemeine Geschäftsbedingungen für Beratungsleistungen der Division DF – Deutschland" (available only in German) and/or
- for other services, the „Supplementary Terms and Conditions for Services ("BL")"<sup>1)</sup> and/or
- for other supplies the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>.

In case such supplies should contain Open Source Software, the conditions of which shall prevail over the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>, a notice will be contained in the scope of delivery in which the applicable conditions for Open Source Software are specified. This shall apply mutatis mutandis for notices referring to other third party software components.

##### 1.2 For customers with a seat or registered office outside European Union

For customers with a seat or registered office outside European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for consulting services the "Standard Terms and Conditions for Consulting Services of the Division DF for Customers with a Seat or Registered Office Outside of Germany"<sup>1)</sup> and/or
- for other services the "International Terms & Conditions for Services"<sup>1)</sup> supplemented by "Software Licensing Conditions"<sup>1)</sup> and/or
- for other supplies of hard- and software the "International Terms & Conditions for Products"<sup>1)</sup> supplemented by "Software Licensing Conditions"<sup>1)</sup>

##### 1.3 For customers with master or framework agreement

To the extent our supplies and/or services offered are covered by an existing master or framework agreement, the terms and conditions of that agreement shall apply instead of T&C.

#### 2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials.

A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

An exact explanation of the metal factor can be downloaded at: [https://mall.industry.siemens.com/legal/ww/en/terms\\_of\\_trade\\_en.pdf](https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf)

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

#### 3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

<sup>1)</sup> The text of the Terms and Conditions of Siemens AG can be downloaded at [https://mall.industry.siemens.com/legal/ww/en/terms\\_of\\_trade\\_en.pdf](https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf)

#### 4. Export Regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export may be subject to license. We shall indicate in the delivery details whether licenses are required under German, European and US export lists.

Our products are controlled by the U.S. Government (when labeled with "ECCN" unequal "N") and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. Government or as otherwise authorized by U.S. law and regulations. Products labeled with "AL" unequal "N" are subject to European / national export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Products without label, with label "AL:N" / "ECCN:N", or label "AL:9X9999" / "ECCN: 9X9999" may require authorization from responsible authorities depending on the final end-use, or the destination.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you shall comply with all applicable national and international (re-)export control regulations. In any event of such transfer of goods, works and services you shall comply with the (re-) export control regulations of the Federal Republic of Germany, of the European Union and of the United States of America.

Prior to any transfer of goods, works and services provided by us to a third party you shall in particular check and guarantee by appropriate measures that

- there will be no infringement of an embargo imposed by the European Union, by the United States of America and/ or by the United Nations by such transfer, by brokering of contracts concerning those goods, works and services or by provision of other economic resources in connection with those goods, works and services, also considering the limitations of domestic business and prohibitions of by-passing those embargoes;
- such goods, works and services are not intended for use in connection with armaments, nuclear technology or weapons, if and to the extent such use is subject to prohibition or authorization, unless required authorization is provided;
- the regulations of all applicable Sanctioned Party Lists of the European Union and the United States of America concerning the trading with entities, persons and organizations listed therein are considered.

If required to enable authorities or us to conduct export control checks, you, upon request by us, shall promptly provide us with all information pertaining to the particular end customer, the particular destination and the particular intended use of goods, works and services provided by us, as well as any export control restrictions existing.

You acknowledge that under the EU embargo regulations against Iran, Syria and Russia respectively the sale of certain listed goods and related services is subject to authorization by the competent export control authorities of the European Union. If (i) the goods or services ordered by you are destined for Iran, Syria or Russia, and (ii) the contract for our supplies and/or services is subject to prior authorization of the competent export control authorities of the European Union, the contract between you and us shall come into force in this respect only upon granting of such authorization.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

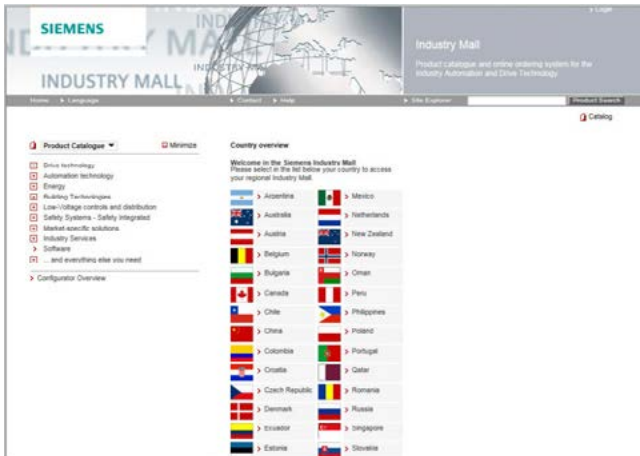

## Appendix

### Notes

## Selection and ordering at Siemens Industry Mall, downloading and ordering catalogs

### Easy product selection and ordering: Industry Mall

### Industry Mall

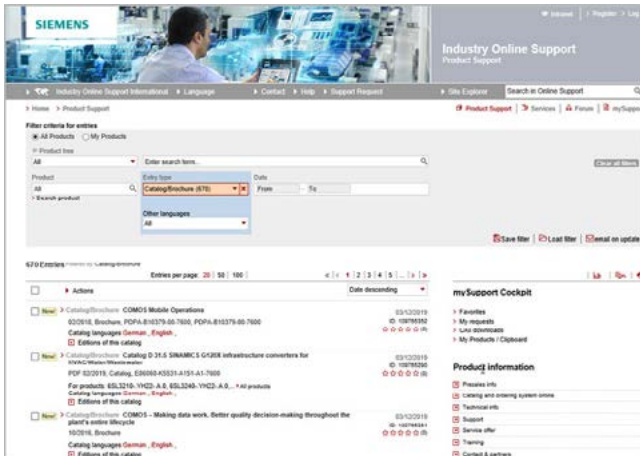

The Industry Mall is a Siemens AG Internet ordering platform. It provides you with online access to a comprehensive product spectrum that is presented in an informative, well-organized way.

Powerful search functions help you select the required products, while configurators enable you to configure complex product and system components quickly and easily. CAX data are also available for you to use.

Data transfer allows the entire procedure, from selection through ordering to tracking and tracing, to be carried out online. Availability checks, individual customer discounting, and quotation preparation are also possible.

[www.siemens.com/industrymall](http://www.siemens.com/industrymall)

### Downloading catalogs

### Siemens Industry Online Support

You can download catalogs and brochures in PDF format from Siemens Industry Online Support without having to register.

The filter box makes it possible to perform targeted searches.

[www.siemens.com/industry-catalogs](http://www.siemens.com/industry-catalogs)

### Ordering printed catalogs

Please contact your local Siemens branch if you are interested in ordering printed catalogs.

Addresses can be found at [www.siemens.com/automation-contact](http://www.siemens.com/automation-contact)

#### Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit <https://www.siemens.com/industrialsecurity>.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under <https://www.siemens.com/cert>.

Subject to changes and errors. The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.

All product designations may be trademarks or other rights of Siemens AG, its affiliated companies or other companies whose use by third parties for their own purposes could violate the rights of the respective owner.
